Dashboard

Login paths, dashboard cards, data sources and module connections

Purpose The Dashboard is a summary and navigation screen. It combines lead and listing records, pipeline stages, visitor activity, account plan information and links into the CRM modules. Values can differ by role and account scope.

1. Sign in and open the CRM Dashboard

SUPER ADMIN / CMS SESSION

`Default Admin login: /admin/login`

1. Sign in with the Super Admin account through the Admin/CMS login.

2. Select **CRM** in the top Admin header. It opens the CRM dashboard in global view.

3. Confirm the CRM header says **Super Admin · Global View**. Use **Back to Admin** to return.

AGENCY OR AGENT / PUBLIC FRONTEND

`Frontend login: /login`

1. Open the public website and choose Login, or visit /login.

2. Select **Agency** or **Agent** and enter that portal account's credentials.

3. Complete any email or two-factor challenge, then choose **Dashboard** in the CRM menu.

New agent: Use the emailed setup link to set a password first.

Scope check: Super Admin aggregates all accounts. An agency or agent dashboard is scoped to the records that account is allowed to see. An agent may use an agency plan where applicable.

2. KPI cards: what each value means

Compare like with like: note the account role, date range and sample lead/listing IDs before reporting a mismatch.

Card	Value shown / rule	Connected module and how to check
Total enquiries	All CRM leads in scope, regardless of stage/status. The small trend is new leads in the last 30 days compared with the 30 days before that.	**Leads:** open Leads with the same account scope and compare the total. The trend compares lead creation dates; it is not the all-time total.
Deals in progress	Leads in non-closed stages plus leads with no stage. The percentage is this open count divided by all leads.	**Leads + Master / Stages:** check lead stages and which stages are marked closed. Click the card to open Leads; check the stage counts there.
Deals won	Leads in closed stages whose stage name does not include “lost”. The displayed win rate is won ÷ (won + lost). If no closed deals exist, it shows —.	**Leads + Master / Stages:** compare closed-stage leads. Stage names containing “lost” are counted as lost; other closed stages are counted as won.
Need follow-up	Leads created at least 2 days ago that have no stage or remain in the default stage. This is the dashboard’s follow-up rule.	**Leads:** inspect older leads with no stage/default stage. This card opens Leads; apply filters/search as needed to find the records.
Listings	All property records in scope. The note splits active/inactive. The trend compares listings created in the latest 30 days with the prior 30.	**Properties / Commercial:** confirm the correct owner scope and status filter. Admin dashboard combines partner inventory; partner view shows permitted inventory.
Premium	Records with Premium enabled and no end date or an end date not yet passed. The note gives Premium as a share of total listings.	**Premium + Properties:** compare live/scheduled Premium records and their dates. The alert can show Premium items ending in the next 7 days.

All-time card totals and recent-period trends are different measures. “New in last 30 days” is a period count; it is not expected to equal the total number of records.

3. Charts, panels and their source modules

Dashboard section	Values included	Where to verify
Performance	Weekly new enquiries and weekly new listings across 12 consecutive weeks. It charts created records.	Compare created dates in Leads and Properties/Commercial by week. The graph is informational and does not itself filter those modules.
Conversion	Won, lost and open pipeline counts. Win rate uses won ÷ (won + lost); “converted” note is won ÷ all enquiries.	Check lead stage assignments in Leads and stage closed/default settings in Master. The two percentages use different denominators.
Buyer Insights	Busiest weekday counts new leads over the last 90 days. Source bars show counts by configured lead source; up to five are shown.	Check lead creation dates in Leads and source values from Master / Sources. Source totals are across all scoped leads, not only the last 90 days.
Deal Pipeline	Lead totals by open stage, plus no-stage, Won and Lost totals. Admin view merges stages with the same name across owners.	Open Leads and filter by stage/status. For global view, identical stage names across agencies are combined in the dashboard.
Latest Enquiries	Up to six most recent leads, showing name, linked property or General enquiry, source, stage/status and creation time.	Select a row to open that lead in Lead Details. Use “All” to open Leads list.
Most Desired / Latest Properties	Up to four properties. If properties have leads, highest enquiry-count listings are included and supplemented with recent ones; otherwise it shows recent inventory.	Open the listing card to edit that listing. Check its lead count in Properties or Commercial. “Portfolio” opens Properties.
Inventory	All listings split by sale/rent and property type (up to six property types), plus Active, Inactive and Premium counts.	Compare record types and statuses in Properties and Commercial. Super Admin sees aggregate inventory.

4. Alerts and shortcuts: click-through checks

Dashboard item	Why it appears	Expected destination
Listing limit reached	Plan limit exists and remaining listing slots are zero.	Plans; verify plan usage and remaining capacity.
Leads waiting 2+ days	No stage/default-stage lead created at least two days ago.	Leads; locate qualifying records and update a test lead stage if permitted.
Active leads	Count returned by lead statistics for active leads.	Leads with active status query.
Premium expiring in 7 days	Premium end date falls between now and seven days ahead.	Properties; compare Premium end dates.
Inactive listings	Total listing count minus active listing count.	Properties; filter to inactive and compare.
Shortcut dock	Links vary by approval and account type. Approved accounts see listing/lead tools; Agency and Admin can see agent links; Super Admin also has global operational links.	Click each shortcut and confirm its module loads. Plan-gated screens can still show their own lock message.

Connection map
Leads cards/charts → **Leads** and **Master / Stages & Sources**. Listing cards/charts → **Properties / Commercial** and **Premium**. Usage card/limit alert → **Plans**. Account-specific filters depend on signed-in role and owner scope.

5. Tester workflow

1	**Sign in by role.** Test Super Admin via Admin/CMS then CRM button; test Agency and Agent via public /login. Record which account is used.
2	**Confirm view scope.** Check the global-view label or partner name/plan. Compare dashboard values against records owned by that account.
3	**Check totals and period counts.** Compare Total enquiries and Listings to module lists. For trend values, use created dates and compare the last 30 days with the previous 30 days.
4	**Check stage logic.** In Leads and Master, inspect a few open/default/closed stage records. Compare Open, Won, Lost, win rate and follow-up count using the rules on page 1.
5	**Check sources and time charts.** Compare Buyer Insights source totals with lead source data; compare weekday counts using leads created in the last 90 days.
6	**Check each click-through.** Click a KPI, alert, shortcut, recent enquiry and listing card. Confirm it opens the expected module and record; check filters if provided.
7	**Check empty and restricted states.** Use an account with little/no data or a plan lock where available. Empty charts, locked modules and retry errors should be understandable.

6. Expected results

- Dashboard loads after sign-in without blank cards, broken charts or overlapping text.
- Record counts match the applicable account scope and the exact rule/date period described in this guide.
- Changes made to a test lead stage/source or listing status/date are reflected after reloading the dashboard.
- Every clickable card or shortcut opens its linked CRM module. A click may open a general list; the tester may need to apply the module filter to locate exact records.
- Zero-data accounts display sensible empty states. Locked plan features explain that access depends on plan.

7. Report a dashboard issue

> Provide: account role and account name/ID; KYC/approval and plan; dashboard card or chart; expected value and displayed value; date/time tested; sample lead/listing IDs; module values used for comparison; click-through URL/screen; screenshot.

Calculation notes: Dashboard values are produced from backend lead/property queries. Date windows use record creation dates. Global pipeline rows with matching stage names are merged. A “lost” closed stage is identified by its stage name containing the word “lost”.
