Commercial Listings

Create, verify, approve, publish and manage commercial properties

Purpose: Commercial is the commercial listing workflow for offices, retail, warehouses, land and other commercial inventory. Listings are created by the account team and can appear on the public website after permit/compliance requirements and Super Admin approval are satisfied.

Create a test commercial listing and verify permit

1. Open Commercial and choose Add Listing. Use disposable test data; enter title/description, location, commercial use/type, sale or rental terms, price, size/area, specifications, images and agent/owner.
2. In Core Details, select applicable permit authority/type and enter DLD permit information/expiry where required. Use online DLD Verify while creating or editing the listing.
3. Check verification success/failure feedback. Save and reopen; verify permit identifier, status/method and expiry persist. Test invalid/expired permit only with authorized test data.
4. Submit/save for review. As Super Admin, open Listing Permits/approval queue and approve an eligible test listing. Try request-changes/take-down only with a disposable record.
5. After approval, verify listing can be published and appears publicly with correct commercial details. Confirm it is not live before approval or when permit is expired/invalid.

Remember: DLD online permit verification is a permit check. It does not replace Super Admin listing approval. Approval, listing status and permit validity are separate checks that all affect public availability.

Edit and section checks

Open the saved listing and edit safe values in available sections: core details, commercial use/specifications, price/lease terms, amenities/features, gallery/media, agent, nearby places, floor plans, SEO and other tabs shown. Save and reopen; use preview/public page after approval. Verify contact/enquiry uses the selected account/agent.

Find, assess and promote

Filters, grid/list and quality score

1. Search for a known test commercial listing. Apply visible filters for status, commercial use/type, location, price/rent, size or other facets. Clear filters and compare counts.
2. Switch Grid and List views. Confirm the same records, permit/compliance state, price and actions are represented. Reopen a record from each view.
3. Inspect the listing Quality Score and its breakdown. Complete missing commercial details, photos, description, location and features; save and check the score response.

Quality score: Indicates listing completeness/readiness. It is not proof of DLD permit validity or Super Admin approval. Verify all three independently.

Commercial listing insights

Open listing Insights when available. Check impressions (listing exposure) and listing clicks (opens of the listing detail) and any date-range/trend controls. Visit the approved public test listing from a clean test session, then refresh/report after tracking updates. Ensure metrics correspond to this commercial listing and chosen dates.

Premium / featured commercial listing

Premium supports both Properties and Commercial. Select an eligible test commercial listing and inspect available plan allowance/quota or credit payment. Review start/end date and duration before confirming.

4. Use a sandbox/test listing and choose plan premium or credits if available. Check displayed credit cost/balance and selected duration/end date.
5. Verify Live/Scheduled status, Premium badge and website Premium placement. Edit dates or stop/cancel the test feature and confirm the end state.

Expected: Promotion respects plan/credit entitlement, dates and status. At the end date it ceases to be live; removing live Premium removes badge/placement. Do not spend live credits or purchase an ad in production.

Mark outcome and verify

Sold or rented workflow

1. Choose a disposable active Commercial listing and select Mark as Sold or Mark as Rented, as applicable.
2. Link an existing test buyer/tenant lead or enter a new test contact. Fill sale/rent price, completion date, rented-until date if shown, commission and notes.
3. Upload required sample ownership/title and contract documents (sale contract/Form F or MOU, or Ejari for rent). Submit and inspect validation/result.
4. Check Sold Listings, linked CRM lead and sales reporting. Confirm listing is removed from active public inventory and buyer lead closes as won per workflow. Revert only if supported and with the test record.

Expected results

- [ ] Commercial fields, permit and edits save and render correctly.
- [ ] DLD verification status is separate from approval; only approved eligible listing becomes public.
- [ ] Filters, Grid/List, quality score and listing impressions/clicks correspond to the right record.
- [ ] Premium dates/payment and featured badge/placement are correct.
- [ ] Sold/rented record leaves active/public listings, appears in Sold Listings, links the correct lead and updates reports.

Safe testing and defect report

Use test commercial listings, test permits, fake contacts and sample documents. Record account/role, listing ID, commercial type, permit result, approval status, quality breakdown, filter/view, insights date range, Premium payment method/dates, sold lead ID, steps, expected vs actual and screenshots. Mask permit and contact data; do not publish real inventory or make live payments.
