Listing Permits

Super Admin review of submitted property permits and approval for website display

Access: Super Admin only. Agency/Agent users submit listing and permit information from Properties/Commercial and may validate eligible permits with DLD/ADREC. Super Admin uses Listing Permits to review submitted records, verify supporting details and approve eligible listings for the public website.

Purpose and status flow

This module is the Super Admin compliance queue. It shows properties by permit/review status, links each permit to its listing and owner, and records review history. A listing is public only when the configured approval/compliance requirements are met and it is not sold or expired.

State	Meaning for tester
Permit details needed / Draft	Required permit information is incomplete. The listing owner must complete/validate it before review.
Awaiting approval / Not verified	Submitted listing awaits Super Admin review when approval is required, or has not completed verification. It is not public yet.
Verified / Approved	Permit/review checks passed. Listing may be live if its status and expiry also allow it.
Taken down / Changes requested	Super Admin removed it from website pending correction; owner must change permit details and validate again.
Permit expired	Expiry passed; listing must stay offline until owner renews and validates permit details.

Approval policy: With Super Admin approval enabled, submitted listings wait for approval. Some permit types (such as DTCM or no-permit cases) may always wait for manual review. If policy allows auto-approval, a permit successfully verified by the owner may go live without a separate approval action. Expired listings never show publicly.

Tester workflow - review and approve

1. As Super Admin, open Listing Permits. Review status tabs/counts (Draft, Pending, Changes requested, Approved, Expired), search by listing title/reference/permit/agency/agent and paginate.
2. Ask an Agency/Agent test account to create a property, enter permit details, run DLD/ADREC Verify if supported and submit/save it for review.
3. Open the submitted property in Listing Permits. Check owner/agent, listing details, permit number/type/issuer, expiry/QR, online/manual verification indicator, checklist and missing fields.
4. For online-verified permits, compare the permit authority’s data with listing values shown side-by-side (purpose, type, location, bedrooms, size, price). Investigate mismatches before approval.

Approve, take down and verify

Approval workflow

1. Review the permit checklist and missing items. Test an incomplete record: Approve should be unavailable or rejected with a clear explanation.
2. For a valid eligible pending test listing, select Approve & Publish and confirm. Reopen status and check review history/time/actor.
3. Open the public website and find the approved listing. Verify it is visible with the expected listing details, price, location, media and assigned agency/agent contact.
4. For a disposable approved listing, test Take down. Confirm it disappears from public results and the agency/agent is told to correct/validate permit details. Update/validate from owner account and verify the expected re-review route.
5. Test expired permit state and sold listing state. Confirm expired/sold items cannot be approved or displayed as active. Test direct URL access as a non-admin; access must be denied.

Expected results

- [ ] Only Super Admin can access Listing Permits and perform approval/take-down actions.
- [ ] Search, status tabs and counts return listings in the selected compliance state.
- [ ] Review screen shows correct permit, listing, owner, verification, expiry, checklist and history data.
- [ ] Incomplete/mismatched/expired/sold listings cannot be approved; errors identify what needs attention.
- [ ] Approved eligible listing appears on public website; pending/taken-down/expired listing stays offline.
- [ ] Take down removes the listing from the website and records a clear review action.

Test notes and bug reporting

Use test properties and test permits only. Record Super Admin account, listing ID/reference, permit type/issuer, DLD/ADREC result, expiry, comparison mismatch, compliance state, approval policy, public URL and review history. Include steps, expected vs actual and screenshot. Mask permit numbers, owner contact details and documents.

> **Decision rule:** DLD/ADREC verification confirms permit details with the authority when supported. Super Admin review checks the listing against the permit and approves when required. Only an eligible approved/verified, non-expired, non-sold listing should be publicly live.
