Sold Listings

Module purpose, hands-on test workflow and expected results

Access: Record and review properties marked as sold, preserving sale outcome and listing history for reporting.

What this module does

Record and review properties marked as sold, preserving sale outcome and listing history for reporting.

Tester workflow

1. Open Sold Listings and search a known test sale.
2. From a disposable property, use the sold action/modal and enter test sale details such as date/price if requested.
3. Save, inspect the sold list and open the record.
4. Check whether it is removed from active inventory/public listing..

Expected results

- [ ] Sold status and sale fields persist and record appears in Sold Listings.
- [ ] Active/public inventory reflects the configured behavior; reports use the sold value/date.
- [ ] Reversal, if available, restores the intended state.
- [ ] Use only disposable listings and fictitious sale details..

Test notes

Bug report: Include module, role/account/plan, test record ID, exact steps, expected vs actual result, timestamp and screenshot. Use test data only; mask personal data and do not perform live billing, publishing, destructive, or external integration actions without authorization.
