Marketing Properties

Module purpose, hands-on test workflow and expected results

> **Access:** Select and manage listings prepared for marketing promotion or campaign distribution.

What this module does

Select and manage listings prepared for marketing promotion or campaign distribution.

Tester workflow

1. Open Marketing Properties, inspect available/pending/completed views and search.
2. Add or select a disposable eligible listing for marketing, review content/preview and save.
3. Update/remove it if allowed.
4. Verify its status and associated listing details after refresh..

Expected results

- [ ] Correct listing is selected; marketing status and content persist and links point to the right property.
- [ ] Validation prevents incomplete assets where required.
- [ ] Removing from marketing does not unexpectedly delete the listing itself.
- [ ] Use test assets only..

Test notes

> **Bug report:** Include module, role/account/plan, test record ID, exact steps, expected vs actual result, timestamp and screenshot. Use test data only; mask personal data and do not perform live billing, publishing, destructive, or external integration actions without authorization.
