Agents

Module purpose, hands-on test workflow and expected results

Access: Manage agency team members, agent profiles, account access and lead assignment eligibility.

What this module does

Manage agency team members, agent profiles, account access and lead assignment eligibility.

Tester workflow

1. Open Agents and compare active/pending/inactive counts.
2. Search and open a test agent profile; review contact, status, listings and leads.
3. Create/invite a test agent if authorized, update safe profile fields and verify status/role.
4. Check lead assignment options and agent availability after status changes..

Expected results

- [ ] Agent profile and status persist; only eligible active agents appear in assignment/round-robin choices.
- [ ] Pending/inactive agents cannot receive new routed leads.
- [ ] Invite/activation flows give clear feedback.
- [ ] Use test emails and do not invite real people..

Test notes

Bug report: Include module, role/account/plan, test record ID, exact steps, expected vs actual result, timestamp and screenshot. Use test data only; mask personal data and do not perform live billing, publishing, destructive, or external integration actions without authorization.
