Nearby Places

Module purpose, hands-on test workflow and expected results

Access: Maintain nearby amenities/locations linked to property listings and shown as local-area context.

What this module does

Maintain nearby amenities/locations linked to property listings and shown as local-area context.

Tester workflow

1. Open Nearby Places, search existing entries and inspect category, location/map coordinates and status.
2. Add a test place with safe sample coordinates/category, save and reopen.
3. Link it to a test property or view the property Nearby tab; edit/remove the test place..

Expected results

- [ ] Place details and coordinates persist; correct place appears near the intended listing and category.
- [ ] Map/location display is reasonable and filters work.
- [ ] Invalid coordinates or missing required data show validation.
- [ ] Do not use sensitive private addresses..

Test notes

Bug report: Include module, role/account/plan, test record ID, exact steps, expected vs actual result, timestamp and screenshot. Use test data only; mask personal data and do not perform live billing, publishing, destructive, or external integration actions without authorization.
