Listing Settings

Module purpose, hands-on test workflow and expected results

Access: Configure shared listing presentation options such as watermarks and related display rules available to the account.

What this module does

Configure shared listing presentation options such as watermarks and related display rules available to the account.

Tester workflow

1. Open Listing Settings and review current configuration.
2. Change a reversible setting using a test value or sample image.
3. Save, reload and preview a disposable listing/image to confirm the setting applies.
4. Restore the original value after capture.
5. Check role restrictions..

Expected results

- [ ] Setting persists after reload and affects only intended listing media/display.
- [ ] Preview accurately reflects output; invalid formats/values are rejected.
- [ ] Restricted users cannot change global settings.
- [ ] Restore configuration after the test..

Test notes

Bug report: Include module, role/account/plan, test record ID, exact steps, expected vs actual result, timestamp and screenshot. Use test data only; mask personal data and do not perform live billing, publishing, destructive, or external integration actions without authorization.
