Contact Us

Module purpose, hands-on test workflow and expected results

Access: Send a message/request to the platform team using the account contact workflow.

What this module does

Send a message/request to the platform team using the account contact workflow.

Tester workflow

1. Open Contact Us, inspect form fields and any contact details.
2. Submit a short test message with a unique reference and valid test email; check success feedback.
3. If a confirmation or ticket link is provided, open it and verify the submitted content/status.
4. Check required-field and invalid-email validation..

Expected results

- [ ] Valid submission receives clear confirmation and is not duplicated on one click.
- [ ] Invalid fields show actionable errors.
- [ ] The request contains the correct sender/account and message.
- [ ] Do not send real support requests or sensitive data during testing..

Test notes

Bug report: Include module, role/account/plan, test record ID, exact steps, expected vs actual result, timestamp and screenshot. Use test data only; mask personal data and do not perform live billing, publishing, destructive, or external integration actions without authorization.
