Credits

Module purpose, hands-on test workflow and expected results

Access: View account credit balance/usage and any available credit purchase or add-credit workflow.

What this module does

View account credit balance/usage and any available credit purchase or add-credit workflow.

Tester workflow

1. Open Credits and record displayed balance/used/remaining values.
2. Review transactions and calculator/modal.
3. Use preview/calculator with test amounts; perform a purchase/add-credit action only in sandbox or with explicit authorization.
4. Refresh and compare ledger/balance..

Expected results

- [ ] Balance arithmetic and transaction history agree; calculations match displayed rates/quantities.
- [ ] Confirmation precedes any charge or credit deduction.
- [ ] Access and plan limits are clear.
- [ ] Do not purchase or spend live credits..

Test notes

Bug report: Include module, role/account/plan, test record ID, exact steps, expected vs actual result, timestamp and screenshot. Use test data only; mask personal data and do not perform live billing, publishing, destructive, or external integration actions without authorization.
