My Profile

Module purpose, hands-on test workflow and expected results

Access: View and update the signed-in user’s personal and account profile information.

What this module does

View and update the signed-in user’s personal and account profile information.

Tester workflow

1. Open My Profile and review sections.
2. Change a safe test field (for example display name or phone) and save.
3. Reload and confirm it persists in profile/account header where used.
4. Check required validation and cancel behavior..

Expected results

- [ ] Only intended account profile changes; saved values persist after reload.
- [ ] Invalid data is rejected with field-level feedback.
- [ ] Other users’ profiles are unchanged.
- [ ] Avoid changing login email unless using a dedicated test account..

Test notes

Bug report: Include module, role/account/plan, test record ID, exact steps, expected vs actual result, timestamp and screenshot. Use test data only; mask personal data and do not perform live billing, publishing, destructive, or external integration actions without authorization.
