

Realty SaaS Workflow

How a visitor becomes a paying client, how their listings turn into leads, and what Super Admin controls behind it all.

PREPARED FOR MIGHTY WARNERS DEV TEAM — REVISION OF SECTIONS 7, 8 & 12 OF THE REALTY PORTAL BRS

● Client-side

● Admin-side

● Decision point

00 The model in one line

01 Onboarding & subscription

02 Plans & limits

03 Client dashboard

04 Leads — the lite CRM

05 Super Admin

00 — THE MODEL

One line version

The portal runs as self-service SaaS: a visitor picks a plan on the public pricing page, registers, and immediately gets a scoped dashboard to manage their own properties. Every enquiry a visitor submits on one of those listings becomes a lead that lands back in that same client's dashboard — a lightweight CRM scoped to their own data, not the platform's. Super Admin sits above all of it, owning plans, billing, and global content — but never editing a client's leads directly.

01 — ONBOARDING

From pricing page to dashboard access

Free-plan accounts activate instantly. Paid plans wait for the gateway callback before the account exists at all — nobody gets a login for a subscription that hasn't cleared.

02 — PLANS & LIMITS

What each plan actually gates

A count limit alone won't push anyone to upgrade — pair it with a visible ceiling on placement and branding, not just quantity.

PLAN	AED / MO	PROPERTIES	FEATURED SLOTS	BRANDING	SUPPORT
Free	0	5	0	"Powered by MW Realty" badge	Email
Starter	149	25	3	Badge removed	Email
Pro	349	100	10	Custom logo	Priority support
Enterprise	Custom	Unlimited	Unlimited	White-label	Dedicated manager

What the client sees after login

- **Overview** — a usage meter ("3 of 5 properties used"), not just a hard stop at the limit, so the ceiling is visible before it's hit.
- **My Properties** — add/edit/delete, gated by the plan check above.
- **Leads** — your idea, detailed next.
- **Plan & Billing** — current plan, renewal date, invoices, upgrade/downgrade.

The lite CRM: leads scoped to one client

This confirms your instinct — a "Leads" tab on the client dashboard is the right home for it. Two things make it work as a real CRM instead of just a form inbox:

- **Strict data isolation.** A lead is tagged to the property it came from, which is tagged to a client. Enforce that scoping at the query layer (a global scope on the client's session), never just in the UI — no client should ever be able to see another client's leads by guessing a URL.
- **A status pipeline, not a flat list.** New → Contacted → Viewing scheduled → Negotiation → Won/Lost, with a note field per lead so the client can log what happened on a call or viewing.

05 — SUPER ADMIN

What sits above every client

Recommend Super Admin gets a **read-only** global view into every client's leads and properties, for support purposes — never an edit path into a client's own CRM data.

06 — CRM HANDLING

What "CRM" means in this build

Every enquiry a visitor submits turns into a lead, sitting inside that client's own Leads tab — nowhere else. That's the whole CRM:

- Every enquiry auto-creates a lead in the client's own Leads tab
- Simple status per lead: New → Contacted → Viewing scheduled → Negotiation → Won/Lost
- A note field to log what happened on a call or viewing
- Email alert to the client when a lead comes in

Worth deciding before this gets built

1. **Free-plan ceiling beyond the count.** 5 properties alone won't drive upgrades — pair it with no featured placement and the "Powered by" badge, as in the table above.
2. **Trial on paid plans?** Right now Starter/Pro require payment before the account exists. A 7–14 day trial (card on file, no charge yet) usually converts better than a hard paywall at signup.
3. **Expiry handling.** A daily job should move an unpaid renewal through grace period → read-only dashboard → login disabled — leads already received should stay visible even in read-only mode.
4. **Lead source tracking.** Tag each lead's origin (own listing / featured placement / referral) so the client's lead list is easy to filter and report on.

Draft workflow — for review before implementation planning begins.
