MW REALTY CRM · TESTER HANDBOOK · MODULE 01

Dashboard

What every card, chart and alert counts, for which account, and how to check the numbers

Where: CRM sidebar › Dashboard (`/crm/dashboard`). `/crm` also opens it. **Who:** Super Admin, Agency, Agent. **Locks:** none. The Dashboard opens even while KYC is pending and on every plan.

1. What this module does

The Dashboard is the first screen after sign-in. It is a read-only summary of the account's leads (enquiries) and listings, with shortcuts into the other modules. Nothing can be edited here. Every number comes from the Leads and Properties data, so a tester can check each number against those lists.

Hero area

Date, greeting, a one-line summary of the last 30 days, alert chips, a plan card (partners) or a top-partners card (Super Admin), and a row of shortcut buttons.

6 KPI cards

Total enquiries, **Deals in progress**, **Deals won**, **Need follow-up**, **Listings**, **Premium**. Each card is a link.

Charts

Performance (12 weeks), **Conversion** (win-rate gauge), **Buyer Insights** (busiest weekday and lead sources), **Deal Pipeline** (leads per stage).

Lists

Latest Enquiries (6 newest leads), **Most Desired Properties** or **Latest Properties** (4 cards), **Inventory** (sale/rent, property types, Active/Inactive/Premium).

How to sign in for each role

- **Super Admin:** sign in at `/admin`, then click **CRM** in the Admin header. The date line shows **· Global view**. Use **Back to Admin** to return.
- **Agency / Agent:** sign in at `/agency-login` or `/agent-login` (or `/portal/login`). Finish the email code or two-factor step if asked. The CRM opens on the Dashboard.
- If the same browser has both an Admin session and a partner session, the **partner** view wins. Use a separate browser or private window for each role.

2. How it works (business rules)

Leads & listings in the account's scope → Counted when the page loads → Cards, charts, alerts

2.1 Scope: whose data is counted

Signed in as	Leads counted	Listings counted
Super Admin	All leads of all accounts.	All listings of all accounts.
Agency	Leads the agency owns. This includes leads the agency assigned to its agents.	Listings the agency owns. This includes listings assigned to its agents.

Signed in as	Leads counted	Listings counted
Independent agent	The agent's own leads.	The agent's own listings.
Agent in an agency	The agent's own leads, plus the agency's leads assigned to this agent.	Only listings the agent owns. Agency listings assigned to the agent are **not** counted here (see section 7).

Deleted leads (in Trash) are not counted. Listing counts include residential and commercial listings, and also listings marked sold or rented.

2.2 What each KPI card counts

Card	Big number	Small badge / note	Click opens
Total enquiries	All leads in scope, any stage or status.	Badge: leads created in the last 30 days compared with the 30 days before (see 2.4). Note: “N in the last 30 days”. Small 12-week line.	Leads
Deals in progress	Leads in a stage that is not closed, plus leads with no stage.	Badge: this number as a % of Total enquiries. Note: “of all enquiries still open”.	Leads filtered to status Active
Deals won	Leads in a closed stage whose name does **not** contain the word “lost”.	Badge: win rate. Note: “N lost · N% win rate”, or “none closed yet” and “—” when nothing is closed.	Leads
Need follow-up	Leads created 2 or more days ago that have no stage or are still in the default stage.	Badge “Act now” when above 0. Note: “untouched for 2+ days”.	Leads
Listings	All listings in scope.	Badge: listings created in the last 30 days vs the 30 days before. Note: “N active · N inactive”. Small 12-week line.	Properties
Premium	Listings with Premium on and no end date, or an end date not yet passed.	Badge “N expiring” when Premium ends within 7 days. Note: “N% of listings promoted”.	Properties

2.3 Won, lost and win rate

- **Closed** and **default** are settings on each stage (Master › Stages).
- **Lost** = closed stage whose name contains “lost” (any case, e.g. “Closed Lost”). **Won** = every other closed stage.
- **Win rate** = won ÷ (won + lost), rounded to a whole %. Shown as “—” when won + lost is 0.
- The Conversion panel footer “N% of all enquiries converted to a won deal” uses a different base: won ÷ Total enquiries.
- Super Admin: stages belong to each account. In the global view, stages with the **same name** are merged into one row.

2.4 Trend badges

- “Last 30 days” means from this moment minus 30 days until now. “Previous” means the 30 days before that.
- Previous = 0 and current > 0 → badge **New**. Both 0 → **0%**. Otherwise the change in %, e.g. **+50%** or **-20%**.
- Trend numbers count **new records** in a period. They are not expected to match the all-time totals.

2.5 Charts and panels

Panel	What it shows
Performance	“Weekly enquiries & new listings, last 12 weeks”. Two lines: Enquiries (leads created) and Listings (listings created), per week starting Monday. The tooltip says “Week of DD Mon”.
Conversion	Gauge with the win rate (or “—”), and three boxes: **Won**, **Lost**, **Open** (same numbers as the KPI cards).
Buyer Insights	“Busiest day · 90 days”: the weekday with most leads created in the last 90 days, plus a Mon–Sun bar chart (busiest day in red). Hidden if no leads in 90 days. Below: up to 5 lead sources with counts over **all** leads in scope. Leads with no source are counted as “Unknown” (grey, listed last).
Deal Pipeline	Subtitle “Your enquiries by stage” (partner) or “All partners, by stage” (Super Admin). Shows “No stage” (if any), then each open stage in stage order with its count and % of Total enquiries, then Won and Lost totals, and a **Work leads** link.
Latest Enquiries	The 6 newest leads: initials, name (or “Unknown”), linked listing title or “General enquiry”, source, stage name (or the status if no stage), and how long ago it was created. Click a row to open that lead. **All** opens Leads.
Most Desired Properties / Latest Properties	Up to 4 listing cards. If any listing has leads, the title is “Most Desired Properties” (“Ranked by buyer enquiries”): the listings with most leads, topped up with the newest listings. If no listing has leads, the title is “Latest Properties” (“Recently added to your portfolio”). Cards with a photo are shown first. A fire badge shows the lead count. Price shows “On request” when empty. Click a card to open the listing edit form. **Portfolio** opens Properties.
Inventory	“N listings by purpose & type”: For sale / For rent counts with a split bar and %, up to 6 property types with counts, and **Active**, **Inactive**, **Premium** counts.

2.6 Alert chips (hero area)

Each chip shows only when its count is above 0. If there are none, one green chip reads **Everything is up to date**.

Chip text	Shown when	Click opens
“used/limit listing limit reached” (or “monthly listing limit reached” for monthly plans)	Partner plan has a listing limit and 0 slots are left.	Plans
“N leads waiting 2+ days”	Same count as **Need follow-up**.	Leads
“N active leads”	Leads with status Active (all time).	Leads filtered to Active
“N featured expiring in 7 days”	Premium listings whose end date is between now and 7 days from now.	Properties
“N inactive listings”	Listings – active listings.	Properties

2.7 Plan card and Top partners card

- **Agency / Agent** see a card “MW REALTY · PARTNER” with the plan name, “used of limit listings” (plus “this month” for monthly plans) or “N listings · unlimited”, “Reports on/off”, and for an agency the number of agents. A bar shows usage. The link reads **UPGRADE** when 0 slots are left, else **MANAGE**; both open Plans. The footer shows the account name and “•••• ” + the account number (4 digits).
- An agent who works under an agency's plan sees the agency's plan: “Plan name · Agency name's plan”.
- **Super Admin** sees “MW REALTY · TOP PARTNERS”: the 3 accounts with the most leads, or “No leads assigned yet.” Footer: “Global view” and “•••• ADMIN”.

2.8 Shortcut buttons

Button	Super Admin	Agency (approved)	Agent (approved)	KYC pending
Add Property, Leads, Properties, Import Leads, Reports, Stages & Tags	Yes	Yes	Yes	No
Agents	Yes (“Agents”)	Yes (“Team Agents”)	No	No
My Profile, Plans & Billing	No	Yes	Yes	Yes
Nearby Places	Yes	No	No	No

Import Leads opens Leads with the import window open. A shortcut can open a module that then shows its own plan lock (for example Reports on a plan without reports).

3. Who can do what

Action	Super Admin	Agency	Agent
Open the Dashboard	Yes	Yes	Yes
Open the Dashboard while KYC is pending	n/a	Yes	Yes
See every account's data	Yes	No	No
See plan card	No (Top partners)	Yes	Yes
Follow lead / listing links	Yes	Only when approved	Only when approved

> **KYC pending:** the Dashboard still loads. Only **My Profile** and **Plans & Billing** shortcuts show. Empty listing area shows “No properties yet.” without the “List your first property” link. KPI cards and lists still link to Leads / Properties, but those modules are locked until approval (sidebar padlock “Unlocks after KYC approval”).

4. Fields and validation

The Dashboard has no forms and no filters. There is no date picker: all periods are fixed (last 30 days, previous 30 days, 12 weeks, 90 days, 7 days ahead).

5. Test scenarios

Priority: **High** core flow / data / access · **Medium** · **Low** cosmetic. Before each check, write down the role, account and the time. Refresh the Dashboard (F5) after changing data elsewhere.

	Scenario	Steps	Expected result
DB-01	**Dashboard loads (partner)** High	1. Sign in as an approved Agency. 2. Open `/crm`.	Redirects to `/crm/dashboard`. Greeting “Good morning/afternoon/evening, <account name>”. All 6 KPI cards, charts and lists render without errors or overlapping text.
DB-02	**Dashboard loads (Super Admin)** High	1. Sign in at `/admin`. 2. Click **CRM**.	Date line ends with “· Global view”. Top partners card instead of plan card. Pipeline subtitle “All partners, by stage”. Shortcuts include Agents and Nearby Places, not My Profile.
DB-03	**Total enquiries matches Leads** High	1. Note **Total enquiries**. 2. Click the card. Clear all filters in Leads. 3. Read the **Total** chip / “of N leads”.	Both numbers are equal for the same account.
DB-04	**New lead updates counts** High	1. Note Total enquiries, “N in the last 30 days”, Deals in progress. 2. Create one test lead in Leads with no closed stage. 3. Refresh Dashboard.	Total enquiries +1, “in the last 30 days” +1, Deals in progress +1. The lead appears first in **Latest Enquiries**. Performance chart: last week +1.
DB-05	**Won stage** High	1. In Master › Stages find a closed stage without “lost” in its name. 2. Move a test lead to it. Refresh.	Deals won +1, Deals in progress −1, Conversion **Won** +1, win rate recalculated as won ÷ (won + lost).
DB-06	**Lost stage** High	1. Move a test lead to a closed stage whose name contains “lost”. Refresh.	Lost +1 (KPI note and Conversion), win rate falls. Deals won unchanged.
DB-07	**No closed deals** Medium	1. Use an account where no lead is in a closed stage.	Deals won 0, badge “—”, note “0 lost · none closed yet”. Gauge centre shows “—”.
DB-08	**Need follow-up rule** High	1. Find leads older than 2 days in the default stage or with no stage (Leads, filter by stage). 2. Compare with the card. 3. Move one of them to another open stage. Refresh.	Card equals the number of such leads; chip “N leads waiting 2+ days” shows the same number. After the move, both drop by 1. A lead created today never counts.
DB-09	**Deals in progress link** Medium	1. Click **Deals in progress**.	Leads opens with status Active in the address bar (`?status=active`). Note: this list may not equal the card number (see section 7).
DB-10	**Active leads chip** Medium	1. Note the “N active leads” chip. 2. Click it.	Leads opens filtered to Active; the list total equals N.

	Scenario	Steps	Expected result
DB-11	**Listings card matches modules** High	1. Note **Listings** and “N active · N inactive”. 2. Count the account's listings in Properties + Commercial + Sold Listings.	Listings = sum of the three lists (agency or independent agent). Active + inactive = Listings. Inventory panel shows the same Active/Inactive.
DB-12	**Activate / deactivate a listing** Medium	1. Make one active test listing inactive in Properties. Refresh.	“active” −1, “inactive” +1 on the Listings card and in Inventory. Chip “N inactive listings” +1 (appears if it was 0).
DB-13	**Premium count and expiry** Medium	1. In Properties, filter **Premium** and count. 2. Make a test listing Premium ending within 7 days (test credits only). Refresh.	Premium card equals the Premium list. Card badge “N expiring” and chip “N featured expiring in 7 days” appear.
DB-14	**Trend badge values** Medium	1. Use an account with no leads in the last 60 days, then add one lead. 2. Use an account with no leads at all.	First case: badge **New**. Second: badge **0%**. With data in both periods: +/−% = (current − previous) ÷ previous.
DB-15	**Performance chart** Low	1. Hover each week point.	12 weeks on the x-axis, tooltip “Week of DD Mon” with Enquiries and Listings. Values match leads/listings created in that Monday-to-Sunday week.
DB-16	**Buyer Insights busiest day** Medium	1. Count leads created in the last 90 days per weekday (Leads, sort by created date).	“Busiest day · 90 days” names the weekday with the highest count and its number; that bar is red. With no leads in 90 days the block is hidden.
DB-17	**Lead sources** Medium	1. In Leads filter by each source and note the totals. 2. Create a lead with no source. Refresh.	Source rows show the same totals (all time), largest first, max 5. A grey “Unknown” row counts leads with no source. No leads at all: “No enquiries yet.”
DB-18	**Deal Pipeline** Medium	1. In Leads filter by each open stage and note totals. 2. Click a stage chevron.	Each open stage shows the same count and its % of Total enquiries. “No stage” shows only if such leads exist. Won and Lost match the KPI cards. Click opens Leads.
DB-19	**Super Admin merged stages** Low	1. As Super Admin, with two agencies both having a stage named “New”.	Pipeline shows one “New” chevron whose count is the sum of both agencies.
DB-20	**Latest Enquiries** Medium	1. Compare with Leads sorted newest first. 2. Click a row. Click **All**.	Same 6 leads, newest first. A lead without a listing shows “General enquiry”. Row opens that lead's detail page. All opens Leads.

	Scenario	Steps	Expected result
DB-21	**Listing showcase** Medium	1. Account with leads on listings. 2. Account whose listings have no leads. 3. Click a card, then **Portfolio**.	1: “Most Desired Properties” with fire badge counts. 2: “Latest Properties”. Max 4 cards; cards with photo first. Card opens the listing edit form; Portfolio opens Properties.
DB-22	**Inventory split** Low	1. In Properties + Commercial filter Sale, then Rent.	For sale / For rent counts match; % add up to about 100. Up to 6 property types, largest first.
DB-23	**Plan card** High	1. As Agency, compare the card with Plans (usage).	Plan name and “used of limit listings” match Plans. “Reports on” only if the plan includes reports. Agency shows “· N agents”. Link reads MANAGE and opens Plans.
DB-24	**Listing limit reached** High	1. Use a test agency on a limited plan with all listing slots used.	Chip “used/limit listing limit reached” (or “monthly …”) opens Plans. Card link reads **UPGRADE**; usage bar 100%.
DB-25	**Agent on agency plan** Medium	1. Sign in as an agent who belongs to an agency with an active plan that includes agents.	Plan card name ends “· <Agency>'s plan”; usage numbers are the agency's.
DB-26	**Agent scope** High	1. As Agency, assign a test lead to Agent A. 2. Sign in as Agent A. Refresh Dashboard.	Agent A's Total enquiries includes the assigned lead. Leads of other agents or other accounts are never counted.
DB-27	**Account isolation** High	1. Note counts for Agency X. 2. Create a lead and a listing in Agency Y. Refresh X.	Agency X numbers do not change. Super Admin numbers increase by 1 each.
DB-28	**Shortcuts by role** Medium	1. Check the shortcut row for Super Admin, approved Agency, approved Agent, KYC-pending partner. 2. Click each one.	Buttons match table 2.8. Each opens its module. Agency label “Team Agents”, Super Admin “Agents”.
DB-29	**KYC pending** High	1. Sign in as a newly registered agency (KYC not approved).	Dashboard loads. Shortcuts: only My Profile and Plans & Billing. Empty listing panel: “No properties yet.” with no link. Sidebar modules show padlock “Unlocks after KYC approval”.
DB-30	**Empty account** Medium	1. Approved account with no leads and no listings.	All numbers 0. Pipeline, Buyer Insights and Latest Enquiries: “No enquiries yet.” Showcase: “No properties yet. List your first property.” Inventory: “No properties yet.” Chip: “Everything is up to date”.
DB-31	**Load error** Low	1. Open another module, set DevTools › Network to **Offline**, click **Dashboard** in the sidebar. 2. Go back online and click **Try again**.	Step 1: an error text (for example “The dashboard could not be loaded.”) with a **Try again** link, not a blank page. Step 2: the Dashboard loads.

	Scenario	Steps	Expected result
DB-32	**Mobile width** Low	1. Set the browser to 375 px wide.	KPI cards show 2 per row; panels stack; no horizontal page scroll; text does not overlap.

6. Expected results checklist

- [ ] Dashboard opens for every role, including KYC-pending partners.
- [ ] Total enquiries equals the Leads total for the same account.
- [ ] Listings equals Properties + Commercial + Sold Listings for an agency or independent agent.
- [ ] Won / Lost / Open and win rate follow the rules in 2.3.
- [ ] Need follow-up equals the “leads waiting 2+ days” chip.
- [ ] Trend badges compare the last 30 days with the 30 days before.
- [ ] One account never sees another account's numbers; Super Admin sees all.
- [ ] Every card, chip, shortcut, row and listing card opens the right screen.
- [ ] Empty accounts show the empty texts, not errors or broken charts.
- [ ] Changes in Leads / Properties show after a refresh.

7. Known behaviour (not bugs)

Note:

- Numbers do not update live. Refresh the page after changing data.
- The Dashboard has no date filter. “Last 30 days” is a rolling window up to the current minute.
- **Deals in progress** counts open stages; the link opens Leads filtered by **status** Active. Stage and status are different fields, so the list total can differ from the card.
- **Listings** includes sold/rented listings and both residential and commercial. The Properties list alone shows fewer.
- For an agent inside an agency, Listings only counts listings the agent owns, while the Properties list also shows agency listings assigned to the agent. Leads do include assigned agency leads.
- Dashboard “lost” means the closed stage name contains “lost”. The Reports module also treats words like “dropped”, “cancelled”, “rejected”, “dead”, “junk” as lost. A stage named e.g. “Dropped” can be “won” here and “lost” in Reports.
- Lead sources and the pipeline are all-time; only the busiest-day chart is limited to 90 days.
- The 12-week chart starts on a Monday 11 weeks ago, so the first and last weeks may be partial.
- Greeting and date use the tester's computer clock; counts use the server clock.

Test data: use only test leads and listings. Do not make real payments for Premium or plans; use test credits/plans set up for QA. Do not enter real people's contact details.

8. Reporting a bug

Include: role and account name/number, KYC state, plan, the card or panel, displayed value and expected value, how you counted it (module, filters used, sample lead/listing IDs), date and time, browser, and a screenshot of both the Dashboard and the list you compared with.
