MW REALTY CRM · TESTER HANDBOOK · MODULE 02

Leads

Lead capture, routing and round robin, the leads list, the lead page, notes, follow-ups and reminders, import, export and deleted leads

Where: CRM sidebar › Leads › Leads (`/crm/leads`), lead page `/crm/leads/<id>` , deleted leads `/crm/leads/deleted` (link **View deleted leads**), follow-ups `/crm/leads/follow-ups` (sidebar › Leads › **Follow-ups**). **Who:** Super Admin, Agency and Agent. **Locks:** locked until KYC approval (padlock, tooltip "Unlocks after KYC approval"). No plan lock — every plan has Leads.

Updated 26 Oct 2026: new **Follow-ups and reminders** (sections 1, 2.4, 2.7, 3, 4, 5.9 LD-50 to LD-58, 6, 7). Selection changed: the header checkbox now ticks **this page**, and a floating bar offers **Select all N** (LD-36). "Select all" + Delete now works (LD-40).

1. What this module does

Leads is the CRM inbox for people who want to buy, sell or rent. A lead is one person (name, emails, phones) plus what they asked for. Leads come from website forms, Facebook Lead Ads, Excel or Facebook CSV imports, and the **Add Lead** button. The team then works each lead: set a stage, add tags and notes, schedule follow-ups, assign an agent, and close it.

Leads list (My Leads / All Leads)

Filter bar, quick-filter chips with counts, a sortable table with selectable columns, row checkboxes with a floating selection bar, toolbar: Assign Stage, Assign Tag, Export, Delete Leads, Table Fields, Import, Lead Assignment (agency), Distribute unassigned (agency), Add Lead.

Lead page

Header with status, ID, received date, channel, stage/source/tag chips and Call / WhatsApp / Email. Tabs: Profile, Timeline, Summary, Insights. Profile has the **Follow-ups** card. Floating **+** menu for quick actions. Previous / next lead arrows.

Import Leads

Upload our Excel template (or a Leads export) with **Direct import**, or a Meta CSV with **Facebook leads**. Runs in the background with live progress and a status file.

Deleted Leads

Leads moved to the bin. Restore, or Delete Permanently, one by one or in bulk.

Follow-ups NEW

Schedule a Call / WhatsApp / Email on a lead, or log one already done with what happened. The responsible person gets a bell notification + email 15 minutes before it is due. Complete, reschedule or cancel.

Follow-ups page NEW

Leads › Follow-ups: every follow-up on the leads you can see, in tabs **Overdue / Today / Upcoming / Done**. Sidebar badge = overdue count.

2. How it works (business rules)

2.1 Where leads come from

Channel	"Came in via" on the lead	Source given	Owner account
Property page enquiry form, Book a viewing, brochure / floor plan download	Property enquiry form, Book viewing, Brochure download, Floor plan download	Website / Brochure Download / Floor Plan Download / Book Viewing (this one is created as the owner account's own source)	The listing's owner (agency or agent). A listing with no owner → Super Admin's unassigned pool (or the agent's account, if Super Admin set an agent on that listing).
"Find me a property" form on an agent or agency profile	Agent profile request / Agency profile request	Agent Profile / Agency Profile	That agency, or that agent. An agent inside an agency → the agency owns it and that agent is assigned.
Custom property request ("Can't find what you're looking for?")	Custom property request	Custom Request	No owner → Super Admin's pool; Super Admins are notified and can transfer it.
Add Lead button in the CRM	Added in CRM	Chosen in the form, else "Direct Lead"	The signed-in account (Super Admin: the chosen Owner, or Super Admin's own leads).
Import › Direct import	Excel import	Source column, else "Import"	The signed-in account.
Import › Facebook leads, or a connected Facebook Page (see Integrations guide)	Facebook lead ads	The ad set name (else the ad name, else "Facebook Lead Ads")	The signed-in / connected account.

- **Every lead gets a stage and a source** when it is created. Stage = the owner's own default stage if it has one, else the shared default (normally "New"). The source is fixed: on the lead page the Source card shows **Read-only**.
- **One person, one account (website forms):** if the enquirer is already a lead of some account (same email, same phone, or same browser), a new website enquiry is added to that account's lead — even when the enquiry is about another account's listing.
- **Public forms are rate-limited:** 20 submissions per hour per IP address. reCAPTCHA may be active.

2.2 Duplicates (repeat enquiries)

New enquiry or Add Lead → Same email or phone in the same owner account? → Yes: existing lead updated / No: new lead

- Email match ignores upper/lower case. Phone match uses the last 9 digits, so `+971 50 123 4567`, `00971501234567` and `050 123 4567` are the same number. Every email / phone a lead ever used is checked, not only the primary one.
- On a match: the enquiry count goes up (badge **×2**, **×3**… next to the name; chip "Enquired N×" on the lead page), a "Repeat enquiry" entry is added to the timeline and Source history, and empty fields are filled. Stage, status, owner and assigned agent are **not** changed.

- If the match is in Deleted Leads, that lead is **restored** and updated. A permanently deleted lead is gone, so a new lead is created.
- The same person enquiring with a different, unrelated account is a separate lead there (not a duplicate).

2.3 Assignment and round robin (agencies)

An agency's lead is either assigned to one of its agents or waits at agency level (**Unassigned**). An independent agent's leads are always that agent's own.

Situation when a new lead arrives	Result (label shown under the agent)
Enquiry about a listing that has an eligible assigned agent	That agent — always, whatever the assignment mode (**Property agent**)
Request from an agency agent's own profile page	That agent (**Manual**, note "Custom request from agent profile")
Mode **Automatic** and this kind of lead is switched on, at least one eligible agent	Next agent in the rotation (**Round robin**)
Mode **Manual**, or this kind switched off, or no eligible agent	Stays **Unassigned** at agency level. The lead is never lost and nothing blocks the enquiry.
Lead added with **Add Lead**	Never auto-assigned — stays Unassigned until someone assigns it.

- **Kinds of lead** in the **Lead Assignment** pop-up: **Property enquiries** (about a listing with no assigned agent), **Generic enquiries** (profile, contact and custom requests; Excel imports), **Facebook leads** (Facebook Pages and Facebook CSV import). New agencies start in Automatic with all three on.
- **Eligible agent** = agent account approved and active, with an approved membership in this agency. Pending, rejected, suspended, inactive or departed agents are skipped.
- **Rotation order** is fixed (agents in the order their accounts were created) and continues after the last agent who received a lead. It is shared by all kinds of lead and by Distribute.
- **Distribute N unassigned** (toolbar, agency only, shown when there are unassigned leads and at least one eligible agent) round-robins **all** current unassigned agency leads at once. It ignores the mode and kind switches. Existing unassigned leads never move by themselves.
- **Manual assignment:** on the lead page, card **Assigned Agent** › pencil. Choose an agent, or "— Unassigned (agency level) —". Every change is kept under **Assignment history** and in the Timeline.
- **Transfer** (Super Admin only, card **Owner**): moves the lead to another account. To an agent → that agent works it. To an agency → it becomes Unassigned at that agency.

2.4 Notifications

- Website enquiry: the owner account gets a bell notification and an email. With no owner, every Super Admin gets a bell and the site notification address gets an email.
- An agent who is given a lead (round robin, property agent or manual assignment) gets a bell notification and an email.
- Add Lead and imports do not send per-lead notifications. An import sends one summary (bell + email with the status file) to the account, plus one summary email to each agent who received leads by round robin.
- **Follow-up due** NEW: 15 minutes before a scheduled follow-up, the person responsible for the lead gets a bell ("Follow-up due: Call", or "Overdue follow-up: …" if sent late) and an email "Follow-up due: Call <lead

name> — MW Realty" with an **Open Lead** button. See 2.7.

2.5 Status, stage, closing and activity

- **Status** is Active or Inactive (lead page floating **+** menu "Mark as Inactive / Active"; new leads are Active). It does not hide the lead.
- **Stage** can be changed inline in the list (Stage column), on the lead page, or in bulk. Moving into a stage marked "closed" stamps **Closed On**; moving back to an open stage clears it.
- Every change of stage, source, status, tags, name / email / phone / company / country / message, contact added or removed, assignment and follow-up is written to the lead's **Timeline** › **Recent activity** with the person's name.

2.6 Import (background)

Upload file → File checked at once (format, columns, data rows) → Rows imported in background (worker starts within about a minute) → Progress bar + Added / Updated / Skipped → Bell + email + status file

- Only one import per account at a time. A run that stops moving for 15 minutes is marked failed; rows saved before stay.
- Each row gets **Added**, **Updated** (matched an existing lead) or **Skipped** with the reason. The status file (your file plus **Import Status** / **Import Remarks** columns) can be downloaded for 30 days.
- Direct import: Stage and Source must already exist in Master; missing **tags are created** automatically. The Owner column is only a check — it must be empty or equal your account's display name. Imported leads go through duplicate matching and round robin (Generic kind).
- Facebook CSV: each ad set becomes a Source in your account (created if missing). Campaign, ad set, ad and form are saved on the lead (Table Fields › Campaign). A Facebook lead already imported (same Facebook lead ID) is skipped.

2.7 Follow-ups and reminders NEW

A follow-up is the team's plan to contact a lead again — **Call**, **WhatsApp** or **Email** — at a set time. Nothing is sent to the customer; it records the activity and reminds the team.

Schedule (type, due time, note) → Reminder 15 min before: bell + email → Complete with what happened (+ optional next follow-up) / Reschedule or Cancel

- **Where:** lead page › Profile › **Follow-ups** card (top right): **+** = Schedule follow-up, clipboard icon = **Log activity** (something already done). Also floating **+** menu › **Schedule Follow-up**, and the **Leads** › **Follow-ups** page.
- **To do / Done:** the card lists open follow-ups (soonest first, red **Overdue** badge when the time has passed) with **Complete**, **Reschedule**, **Cancel**; completed and cancelled ones are listed separately under **Done (N)** with the outcome, time and who did it.
- **Log activity** records a contact already made (e.g. "Called — no answer") straight into Done. Log activity and Complete can schedule the **next** follow-up in the same step.
- **Time zone:** due times are entered and shown in **UAE time** (labelled "(UAE time)" / "(UAE)"), whatever the tester's computer is set to. Quick picks: In 1 hour, Tomorrow 10:00, In 3 days, Next week. Times in the past are

refused.

- **Who is reminded:** decided when the reminder goes out — the lead's **assigned agent** (while still active and on that account), otherwise the **owner account** (agency or independent agent). So reassigning a lead moves its reminders to the new agent. The card shows "Reminders go to <name> (notification + email)."
- **One reminder per due time:** sent once, 15 minutes before it is due (or as soon as possible if it was scheduled less than 15 minutes ahead). **Reschedule** sends a new reminder for the new time. **Completed** and **cancelled** follow-ups never remind. Deleted leads are skipped.
- **Audit:** every action is written to the lead's Timeline as "Follow-up": "Scheduled Call for Tue 27 Oct 2026, 10:00 (UAE)", "Logged WhatsApp", "Rescheduled Call from … to …", "Completed Call (was due …)", "Cancelled Call due …" — with the note / outcome and the person's name.
- **Follow-ups page** tabs: **Overdue** (due time passed), **Today** (rest of today, UAE), **Upcoming** (after today), **Done** (completed + cancelled, newest first), 20 per page. The sidebar item shows a red badge with the overdue count.
- The reminder job runs every 5 minutes on the server (scheduler). On a local test machine run `php artisan leads:send-follow-up-reminders` instead of waiting.

3. Who can do what

Action	Super Admin	Agency	Agent
Open Leads (account approved)	**Yes**	**Yes**	**Yes**
Open Leads while KYC pending / rejected	–	**No (locked)**	**No (locked)**
Leads visible	**All accounts + ownerless**	**Own agency's**	**Own + agency leads assigned to them**
Add Lead, edit, stage, tags, notes, emails / phones	**Yes**	**Yes**	**Own + assigned**
Follow-ups: schedule, log, complete, reschedule, cancel NEW	**Any lead**	**Own agency's**	**Own + assigned**
Follow-up reminders received NEW	**No**	**Own leads with no assigned agent**	**Leads assigned to them + own personal**
Delete, restore, delete permanently	**Any lead**	**Own**	**Own personal only**
Owner filter, Owner column, Transfer (Owner card)	**Yes**	**No**	**No**
Assign agent on the lead page	**Agency leads**	**Yes**	**No**

Action	Super Admin	Agency	Agent
Agent filter; Assigned Agent column	Column optional	Yes (column always shown)	No
Lead Assignment settings, Distribute unassigned	No	Yes	No
Import, Export, Table Fields	Yes	Yes	Yes

- **Agency agent:** sees their personal leads plus the agency's leads assigned to them, but only while still in that agency. They can work an assigned agency lead but cannot delete it (no Delete Lead in the menu; bulk delete skips it and reports "0 leads deleted.").
- **KYC pending:** the menu item shows a padlock. Opening `/crm/leads` directly shows "Your account is pending Super Admin approval." with **Try again**. Dashboard and profile still work.
- **Super Admin** opens the CRM from `/admin`. Title is **All Leads** (partners see **My Leads**). Super Admin's own Add Lead and imports go into Super Admin's own (Admin) leads unless an Owner is chosen.

4. Fields and validation

Field / form	Required	Rules / limits / messages
Name (Add Lead)	Yes	Max 255. Empty: "Enter the lead's name."
Email	Email or phone	Valid address with a real domain (e.g. `name@host` is rejected). Max 255. Both empty: "Either email or phone is required."
Phone + country code	Email or phone	Pick the code from the list (default +971), type the number without it. 7–13 digits; digits, spaces, dashes, dots, brackets only. Messages: "The phone number must be 7 to 13 digits (without the country code).", "The phone number may only contain digits."
Message	No	Free text (lead page: max 5000).
Owner	No	Super Admin only. Empty = "My own leads (Admin)".
Source	No	Add Lead only ("Auto — set from where the lead came in" → Direct Lead). Not editable later.
Stage / Tags	No	Own or shared items only: "That stage does not belong to your account.", "One of the selected tags does not belong to your account." Empty stage = default stage.
Company / Country (lead page)	No	Max 255 / max 100.
Add email / phone (lead page)	Yes	"This lead already has that email." / "That phone number already belongs to lead #N (Name)." Removing the last one: "A lead needs at least one email or phone number."
Note	Yes	Max 5000. Empty: "Write a note first." Success: "Note added."

Field / form	Required	Rules / limits / messages
Import file	Yes	.xlsx, .xls or .csv (also .tsv / .txt), max 10 MB. Direct import columns: Name, Email, Phone, Message, Tags, Source, Stage, Notes, Owner (Status optional).
Lead Assignment	–	Automatic needs at least one kind switched on (Save stays disabled otherwise).
Follow-up type NEW	Yes	Call, WhatsApp or Email (default Call).
Follow-up due time NEW	Schedule / Reschedule	Date and time in UAE time. Empty: "Choose when the follow-up is due." In the past: "Choose a time in the future (UAE time)." Success: "Follow-up scheduled." / "Follow-up rescheduled."
Follow-up note NEW	No	What it is for. Max 2000.
What happened (outcome) NEW	Log activity / Complete	Max 2000. Empty: "Write what happened." Success: "Activity logged." / "Follow-up completed." (with a next one: "Activity logged and next follow-up scheduled." / "Follow-up completed and the next one scheduled.")
Next follow-up NEW	No	Tick "Schedule the next follow-up": type + due time (same rules as above) + optional note.
Cancel reason NEW	No	Max 2000. Success: "Follow-up cancelled." Acting twice on a finished follow-up: "This follow-up is already completed." / "...already cancelled."

5. Test scenarios

Priority: High core flow / data loss / access · Medium · Low cosmetic. Use a new, made-up email and phone for every capture test (see section 7).

5.1 Access and locks

	Scenario	Steps	Expected result
LD-01	**KYC pending lock** High	1. Sign in as an agency or agent whose KYC is not approved. 2. Look at the sidebar, then open `/crm/leads` and `/crm/leads/deleted` directly.	Leads has a padlock ("Unlocks after KYC approval") and cannot be clicked. Direct URL shows "Your account is pending Super Admin approval." and **Try again**. No lead data visible.
LD-02	**Scope per role** High	1. Create one test lead in Agency A, one in Agency B, one for an independent agent. 2. Open Leads as Super Admin, Agency A, Agency B and the agent.	Super Admin ("All Leads") sees all three plus an Owner column and owner filter. Each partner ("My Leads") sees only its own. Opening another account's lead URL shows "This lead was not found — it may have been deleted."
LD-03	**Agency agent sees assigned leads only** High	1. Agency A assigns lead L1 to Agent X; L2 stays Unassigned. 2. Sign in as Agent X. 3. Open L1; change stage, add a tag and a note; open the + menu.	X sees L1 (not L2) plus X's personal leads. Edits save. The + menu has no **Delete Lead**; Assigned Agent card has no pencil. No Lead Assignment button or Agent filter.

	Scenario	Steps	Expected result
LD-04	**Agent leaves the agency** Medium	1. Remove Agent X from Agency A (Agents module). 2. As X, open Leads and the old L1 URL.	L1 no longer appears; its URL shows the not-found message. As Agency A, L1 still shows X in its assignment history.

5.2 Capture, duplicates and routing

	Scenario	Steps	Expected result
LD-05	**Property enquiry → agency lead** High	1. On the public website, open an Agency A listing that has an assigned agent. 2. Send the enquiry form with new contact details. 3. Open the lead as Agency A.	Website shows “Thanks — your enquiry has been received and we'll be in touch soon.” Lead: via “Property enquiry form”, source Website, Property = the listing, assigned to the listing's agent (“Property agent”). Agency bell + email; agent bell + email.
LD-06	**Independent agent listing** High	1. Send an enquiry on a listing owned by an independent agent.	Lead belongs to that agent and is worked by that agent. Not visible to any agency.
LD-07	**Ownerless lead (custom request)** High	1. Submit the custom property request form with new details. 2. As Super Admin open All Leads; open the lead; use Owner card › pencil to transfer it to Agency A.	Lead has Owner “-” in the list and “Unassigned (Super Admin)” on the lead page; Super Admins got a bell. After transfer: “Lead transferred.”, Agency A sees it as Unassigned, Assignment history shows “Transferred to …”.
LD-08	**Agent profile request** Medium	1. On the website open the profile of an agent inside Agency A; send “Find me a property”.	Message “Thanks — your request has been sent to <agent>.” Lead owned by Agency A, assigned to that agent with note “Custom request from agent profile”, even if the agency is in Manual mode. Enquiry details (budget, location…) show under Lead Basic Details.
LD-09	**Repeat enquiry merges** High	1. Send a second enquiry to the same account using the same email in CAPITALS (or the same phone written differently, e.g. 050… vs +971 50…). 2. Open the list and the lead.	No second lead. Name shows **×2**; lead page “Enquired 2×”, Enquiries = 2. Timeline has “Enquired again via …”; Source history lists both enquiries. Stage and agent unchanged.
LD-10	**Add Lead duplicate / restore** High	1. Add Lead with the email of an existing lead. 2. Delete a test lead; Add Lead again with its phone.	(2) “This contact already exists as "<name>" — the existing lead was updated instead of creating a duplicate.” (3) “This contact was in Deleted Leads as "<name>" — that lead was restored and updated instead of creating a duplicate.” and it is back in the list.
LD-11	**Public form rate limit** Low	1. Only on a test server: submit enquiry forms more than 20 times within one hour from one IP.	Further submissions are refused (too many requests) until the hour passes. Earlier leads are saved.

5.3 Round robin and assignment (Agency)

	Scenario	Steps	Expected result
LD-12	**Rotation across agents** High	1. Agency with 3 eligible agents. **Lead Assignment**: Automatic, Property enquiries on. 2. Send 4 enquiries on listings with **no** assigned agent.	Leads go to agent 1, 2, 3, then 1 again (continuing from the last one). Label "Round robin". Each agent gets a bell + email. Automatic card says "Round robin across 3 active agents".
LD-13	**Ineligible agents skipped** High	1. Suspend / deactivate one agent (or leave a pending one). 2. Send 3 more enquiries.	Only eligible agents receive leads. Agent filter and assignment lists do not offer the ineligible agent.
LD-14	**No eligible agent** High	1. Test agency with zero eligible agents, Automatic mode. 2. Send an enquiry; inspect the lead.	Lead is created and visible; Assigned Agent "Unassigned" (lead page: "Unassigned (agency level)"). No error to the website visitor. No Distribute button (no agents).
LD-15	**Manual mode and kinds** High	1. Lead Assignment › Manual › Save changes. 2. Send an enquiry. Then switch back to Automatic with only Facebook leads on; send a generic (profile/contact) enquiry. 3. Try Automatic with every switch off.	(1) "Manual assignment on — new leads wait in Unassigned for you to assign."; toolbar shows "Manual". (2) Both new leads stay Unassigned. (3) **Save changes** stays disabled. Saving a valid change shows "Round robin updated."
LD-16	**Listing agent wins over mode** Medium	1. Agency in Manual mode. Send an enquiry on a listing whose assigned agent is eligible.	Lead goes straight to that agent ("Property agent").
LD-17	**Distribute unassigned** High	1. Have 4 unassigned leads and 2 eligible agents. 2. Click **Distribute 4 unassigned** › confirm "Distribute unassigned leads?".	"4 unassigned leads distributed." Leads alternate between the agents; history note "Distributed from unassigned". The button disappears when no unassigned leads remain.
LD-18	**Manual assign / unassign** High	1. Lead page › Assigned Agent › pencil › pick an agent › **Assign**. 2. Pick another agent; then pick "— Unassigned (agency level) —".	"Lead assigned to <name>." (label Manual), then Reassigned, then "Lead moved back to agency level." Assignment history (N) lists all three with time and who did it. Only the newly assigned agent is notified.
LD-19	**Add Lead not auto-assigned** Medium	1. Agency in Automatic mode, eligible agents. Add Lead manually.	"Lead created." Lead is Unassigned (by design) and counts towards the Distribute button.

5.4 Add and edit

	Scenario	Steps	Expected result
LD-20	**Add Lead happy path** High	1. Click **Add Lead**; fill Name, Email, Phone, Message; choose Source, Stage, Tags; **Create Lead**.	"Lead created." Row at the top (newest first). Lead page: via "Added in CRM", chosen source/stage/tags. Without a source: "Direct Lead"; without a stage: the default stage.
LD-21	**Add Lead validation** High	1. Submit with no name; then no email and no phone; then email `a@b`; then a 5-digit phone; then phone with letters.	"Enter the lead's name."; "Either email or phone is required."; invalid email message; "The phone number must be 7 to 13 digits (without the country code)."; "The phone number may only contain digits." Nothing saved.
LD-22	**+ Stage quick add** Low	1. In Add Lead click **+ Stage**, type a new name, **Add**. Repeat with an existing name.	"Stage added." and it is selected; it appears in Master › Stage. Existing name: "A stage with this name already exists."
LD-23	**Super Admin adds for an account** Medium	1. As Super Admin, Add Lead with **Owner** = a test agency; save. Add another with Owner empty.	First lead shows that agency in the Owner column and appears in the agency's list as Unassigned. Second belongs to Super Admin's own (Admin) leads.
LD-24	**Lead page cards** High	1. Edit Name; Lead Basic Details (Company, Country, Enquiry message). 2. Add a second phone and email; make one primary; remove one; try removing the last contact.	"Name updated.", "Lead details updated.", "Phone number added.", "Email added.", "Primary contact updated." (star moves, header Call/Email use it), "Removed."; last one: "A lead needs at least one email or phone number." Each change is in Recent activity.
LD-25	**Contact used by another lead** Medium	1. On lead A add the phone of lead B (same account).	"That phone number already belongs to lead #<B id> (<B name>)." Not added.
LD-26	**Notes** High	1. Floating + › **Add Note** (opens Timeline › Notes). Click **Add note** empty, then with text. 2. Reload; check list Notes column.	Empty: "Write a note first." Then "Note added.", note shows your name and time, Notes tab count +1, Summary "Notes" +1, list Notes column count +1.
LD-27	**Stage, tags and status from lead page** High	1. Stage card › pick a closed stage (e.g. Closed) › Save. Then an open stage. 2. Tags card › + › choose tags › Save. 3. + menu › Mark as Inactive.	"Stage updated." Summary shows "Closed" date, then it disappears after the open stage. "Tags updated." with chips in the header. "Lead marked as Inactive." Header badge Inactive. All logged in Recent activity.

5.5 List: filters, quick filters, sorting, columns

	Scenario	Steps	Expected result
LD-28	**Search and filters** High	1. Type part of a name, email, phone, or a secondary email in "Name, email or phone". 2. Add All stages / All sources / All tags / date range "to"; agency: All agents › Unassigned; Super Admin: All owners. 3. Click **Clear**.	Only matching leads. Clear shows the active-filter count badge and resets everything; URL query mirrors filters so a refresh keeps them. Empty result: "No leads match these filters".
LD-29	**Quick search** Medium	1. Type a stage, source, tag, agent or message word in **Quick search**.	Table narrows; footer "Showing x to y of N leads (filtered from M)". Chip counts do not change with Quick search. No match: "No matching leads".
LD-30	**Quick-filter chips** Medium	1. Click **Active 24h**, **Last 7 days**, **Website Insights**, then the active chip again.	Active 24h = received in last 24 h or the website visitor was on the site then. Last 7 days = received since the start of the day 7 days ago. Website Insights = came from a tracked website visitor. Counts follow the other filters. Clicking again returns to **Total**.
LD-31	**Sort and paging** Medium	1. Click a column header twice (e.g. Received, Lead, Stage). 2. Change "Show 10/25/50/100"; use Previous / numbers / Next.	First click sorts descending, second ascending (arrow icon). Tags, Property, Campaign and Enquiry Page are not sortable. Default 25 rows. Row numbers (#) continue across pages.
LD-32	**Table Fields** Medium	1. **Table Fields**: add Email, Status, Campaign, Property Views; remove Source; drag to reorder; **Save Fields**. 2. Reload; sign in on another browser as the same user. 3. Drag a column header in the table. Then **Reset to default** › Save.	"Table fields saved." Columns and order kept for this user only. Lead is pinned first; Phone (and Assigned Agent for agencies) shows "Always shown" and cannot be removed. Header drag is saved too. Reset restores defaults.
LD-33	**Inline stage and tags in list** Medium	1. Click a row's stage pill; choose another stage. 2. Click "Add tags" / "+N" in Tags; **Save tags**.	"Stage updated." immediately; "Tags updated."; first tag shown, others as +N. Values match on the lead page.
LD-34	**Super Admin global filter by name** Low	1. As Super Admin filter All Leads by a stage name that several accounts also have as their own.	Leads of every account whose stage has that name are listed.

5.6 Selection, bulk actions, export

	Scenario	Steps	Expected result
LD-35	**Buttons need a selection** Low	1. With nothing ticked, hover Assign Stage, Assign Tag, Export, Delete Leads.	Disabled with tooltip "Select leads first". No floating selection bar.

	Scenario	Steps	Expected result
LD-36	**Select this page / select all** High UPDATED	1. Filter to more than one page of leads. Tick the header checkbox. 2. In the dark bar at the bottom click **Select all N**. 3. Untick two rows; go to page 2. 4. Click ✕ in the bar.	(1) Only this page is ticked; the bar shows "25 selected" (page size), **Select all N**, Assign Stage, Assign Tag, Export, Delete (25) and ✕. (2) Count = all matching leads. (3) Count minus 2; header shows a dash (partly selected); page 2 rows are ticked. (4) Bar slides away, all ticks cleared. Changing a filter clears the selection.
LD-37	**Assign Stage in bulk** High	1. Tick 3 leads (one already in stage S). **Assign Stage** › pick S › **Apply (3)**.	"Stage "S" set on 2 leads (1 already had it)." Each lead's timeline records the change. Untouched leads unchanged.
LD-38	**Assign Tag in bulk** High	1. Select all matching; **Assign Tag**; tick 2 tags (or **Add New Tag**); Apply.	"2 tags added to N leads." Existing tags are kept (added, not replaced). Only matching leads changed.
LD-39	**Export** High	1. Tick 2 leads › **Export** › **Download**. 2. Filter, select all across pages, export again.	Pop-up says "Selected in the table" / "Every lead matching your filters" with the count. File `leads-<date-time>.xlsx` with columns Name, Email, Phone, Message, Tags, Source, Stage, Notes, Owner, Status, Received At, Updated At; row count equals the selection.
LD-40	**Bulk delete** High UPDATED	1. Tick 2 disposable leads › **Delete Leads** › confirm "Delete these 2 leads? You can restore them later from Deleted Leads." 2. Filter to a small group of disposable leads › header checkbox › **Select all N** › **Delete (N)** › confirm.	"2 leads deleted." / "N leads deleted." They leave the list and counts; they appear in Deleted Leads. Leads outside the filter are untouched.

5.7 Import

	Scenario	Steps	Expected result
LD-41	**Direct import mixed file** High	1. **Import** › Direct import › **Download the template**. 2. Fill rows: 2 valid new; 1 matching an existing lead; 1 with no name; 1 with no email and phone; 1 with stage "Xyz"; 1 duplicating row 2's email; 1 blank. Clear the Owner column or use your account name. 3. **Upload & Import**; wait.	"Importing N rows in the background…". Progress shows "Starting import…" then a % bar. Finish: "Import finished — N rows" with 2 added, 1 updated, rest skipped. **Download status file**: remarks such as "Name is missing.", "Email or phone is required.", "Unknown stage "Xyz" — it must already exist under Master > Stage.", "Duplicate of row 2 in this file (same email).", "Empty row." Bell + summary email received.
LD-42	**Owner column check** Medium	1. As an agency, import the template keeping the sample Owner value "Admin".	That row is skipped: "Owner "Admin" does not match your account ("<your name>")."

	Scenario	Steps	Expected result
LD-43	**Wrong file or format** High	1. Upload a .pdf; a file over 10 MB; the template with the Tags column removed; a Facebook CSV under Direct import; the template under Facebook leads; a template with headings only.	Each is refused at once with: “Upload an Excel (.xlsx, .xls) or CSV file.”; size error; “The file format has been changed… Missing column(s): Tags.”; “This file is a Facebook leads export. Choose "Facebook leads" to import it.”; “This file is in the MW Realty lead template format… Choose "Direct import"…”; “The uploaded file has no data rows.”
LD-44	**Facebook CSV import** High	1. Import › Facebook leads › **Download a sample file**; edit it to test contacts. 2. Upload; then upload the same file again.	Leads via “Facebook lead ads”, source = ad set name (new Source in your Master list), Campaign column filled, message lists form answers. Second upload: rows skipped “Already imported — this Facebook lead (…) is lead #N.” Round robin follows the Facebook leads switch.
LD-45	**One import at a time** Medium	1. Start a large import; while it runs, upload another file. Close the pop-up and reload Leads.	“<file> is still importing — please wait for it to finish before uploading another file.” The progress card stays above the list after reload; **Refresh leads** appears when done.

5.8 Delete, restore, lead page navigation, mobile

	Scenario	Steps	Expected result
LD-46	**Delete from lead page and restore** High	1. Lead page › + › **Delete Lead** › confirm “Delete this lead?”. 2. **View deleted leads** › **Restore**.	“Lead deleted.”, back to the list. Deleted Leads shows it with Deleted time (Owner column for Super Admin). “Lead restored.” It returns with stage, tags, notes and history intact.
LD-47	**Delete permanently** High	1. Deleted Leads › **Delete Permanently** on one disposable lead › confirm. 2. Tick two › **Select all N** (if shown, in the floating bar) › bulk **Restore** / **Delete Permanently**. 3. Send a new enquiry with the same contact.	Confirm text “Permanently delete <name>? This cannot be undone.” Then “Lead permanently deleted.”, “N leads restored.” / “N leads permanently deleted.” The later enquiry creates a brand-new lead (×1). Empty bin: “No deleted leads.”
LD-48	**Lead page tabs and navigation** Medium	1. Open a website lead and a manual lead. Visit Profile, Timeline (Recent activity / Notes / Source history), Summary, Insights. 2. Use the left/right arrows and the X.	Website lead's Insights shows views, searches, favorites, chats. Manual lead: “No website activity for this lead”. Summary counts match the tabs. Arrows move to the next newer / older lead of your whole list (not the filtered list); disabled at the ends.
LD-49	**Mobile width** Low	1. Open Leads and a lead page at phone width (about 375 px).	Table scrolls sideways with checkbox, # and Lead pinned; toolbar buttons and filters stay usable; lead page cards stack; the + menu opens; the selection bar wraps instead of going off-screen.

5.9 Follow-ups and reminders NEW

Use test leads assigned to a test agent whose login you have. Locally, run `php artisan leads:send-follow-up-reminders` to send due reminders at once; emails go to the mail log / Mailtrap.

	Scenario	Steps	Expected result
LD-50	**Schedule a follow-up** High	1. Lead page › Profile › **Follow-ups** card › **+**. 2. Choose **Call**; set the due time about 10 minutes ahead; Note "Confirm viewing"; **Schedule**. 3. Open the Timeline tab.	"Follow-up scheduled." Card › To do: "Call · Due <day date, time> (UAE)" and the note, with Complete / Reschedule / Cancel. Footer "Reminders go to <assigned agent, else owner> (notification + email)." Timeline: "Follow-up — Scheduled Call for … (UAE)", note and your name.
LD-51	**Validation** High	1. Schedule with the due time cleared. 2. Schedule with a time in the past. 3. Log activity with "What happened?" empty. 4. Tick "Schedule the next follow-up" with a past time.	"Choose when the follow-up is due."; "Choose a time in the future (UAE time)."; "Write what happened."; next time error under the next-follow-up field. Nothing saved, the dialog stays open.
LD-52	**Reminder: bell + email, once** High	1. Wait until 15 minutes before the LD-50 due time (locally: run the reminder command). 2. Sign in as the lead's assigned agent; open the bell; click the item. 3. Check the email inbox / mail log. 4. Run the command again.	Bell "Follow-up due: Call — Call <lead> — due … (UAE). Confirm viewing."; clicking opens the lead. Email "Follow-up due: Call <lead> — MW Realty" with type, due time, lead phone / email, note and **Open Lead**. Second run: "Sent 0 follow-up reminder(s)." — no duplicate.
LD-53	**Who gets the reminder** High	1. Schedule a follow-up on an agency lead assigned to Agent X; reassign the lead to Agent Y before it is due; trigger the reminder. 2. Repeat on an Unassigned agency lead, and on an independent agent's lead.	(1) Y (not X) gets the bell + email. (2) The agency account gets it; the independent agent gets their own. The card footer names the same person.
LD-54	**Reschedule re-arms the reminder** High	1. After LD-52, click **Reschedule** on the same follow-up; pick a new time about 10 minutes ahead; save. 2. Trigger the reminder.	"Follow-up rescheduled." Timeline: "Rescheduled Call from <old> to <new>". A new reminder is sent for the new time (exactly one).
LD-55	**Complete with next follow-up** High	1. Click **Complete**; What happened "Spoke to her — viewing Saturday". 2. Tick **Schedule the next follow-up** › WhatsApp › **Tomorrow 10:00** › **Mark complete**. 3. Click Complete again on the finished one (e.g. second browser tab).	"Follow-up completed and the next one scheduled." The first moves to **Done** (green Done badge, outcome, time, your name); the WhatsApp one appears under To do. Timeline: "Completed Call (was due …)" + "Scheduled WhatsApp for …". Step 3: "This follow-up is already completed."
LD-56	**Cancel stops the reminder** High	1. Schedule a follow-up 10 minutes ahead; **Cancel** it with reason "Customer busy". 2. Trigger the reminder.	"Follow-up cancelled." Listed under Done with a grey Cancelled badge and the reason. Timeline "Cancelled Call due …". No reminder is sent.

	Scenario	Steps	Expected result
LD-57	**Log an activity already done** Medium	1. Card › clipboard icon (**Log activity**) › **WhatsApp** › "Sent the brochure" › **Save activity**.	"Activity logged." It goes straight to Done (no due time, no reminder). Timeline: "Logged WhatsApp — Sent the brochure".
LD-58	**Follow-ups page and access** Medium	1. Sidebar › Leads › **Follow-ups**. Visit Overdue, Today, Upcoming, Done. 2. Schedule one 2 minutes ahead, wait 3 minutes, reload. 3. As another account, open a lead from LD-02 that is not yours and try the follow-up actions via its URL.	(1) Tab counts match the items; each row links to its lead; Complete / Reschedule / Cancel work here too. Empty tabs: "Nothing overdue — nice work.", "Nothing else due today.", etc. (2) It moves to **Overdue** (red badge) and the sidebar Follow-ups item shows a red count. (3) Not-found message — other accounts' follow-ups are never shown or changed.

6. Expected results checklist

- [ ] Each role sees only its leads; KYC-pending accounts are locked out.
- [ ] Website enquiries land in the right account with the right channel, source, property and agent.
- [ ] Same email / phone in the same account updates one lead (×N), never creates a second one.
- [ ] Round robin rotates only across eligible agents; no eligible agent → Unassigned, never lost.
- [ ] Manual mode and switched-off kinds leave leads Unassigned; listing agents still get their enquiries.
- [ ] Filters, quick chips, Quick search, sorting and paging give consistent counts.
- [ ] Table Fields choices and order persist per user; locked fields cannot be hidden.
- [ ] The header checkbox ticks this page; Select all N covers every matching page; bulk actions (including delete) touch only the selection.
- [ ] Every edit appears in Recent activity with the right person and time.
- [ ] Import reports every row as Added / Updated / Skipped with a reason; nothing fails silently.
- [ ] Export rows equal the selection; delete is reversible until Delete Permanently.
- [ ] Follow-ups can be scheduled, logged, completed, rescheduled and cancelled; open and done ones are shown apart. NEW
- [ ] Each due follow-up sends exactly one bell + email to the person responsible at that moment; reschedule re-arms it, complete / cancel stop it. NEW
- [ ] All follow-up times read in UAE time; every follow-up action is in the Timeline. NEW

7. Known behaviour (not bugs) and test-data cautions

By design:

- Leads added with Add Lead are never auto-assigned, even in Automatic mode.
- Distribute ignores the Manual / kind switches and shares out every unassigned lead.
- The Source of a lead cannot be changed after it is created.
- An enquiry from someone who is already another account's lead goes to that account, not to the listing's owner.

- An agency agent cannot delete agency leads; a bulk delete of only such leads says “0 leads deleted.”
- Quick search does not change the chip counts. Previous / next arrows ignore the current filters.
- A Status filter can come from a Dashboard link (`?status=…`); there is no Status control and Clear does not remove it — open `/crm/leads` fresh.
- Direct import creates missing tags, but rejects unknown stages and sources. Leads export “Notes” is an old free-text field, not the Timeline notes.
- The import worker may take up to about a minute to start (“Waiting for the import worker”).
- Agents of an agency see their own and the shared stages / tags in pickers, not the agency's own custom ones.
- **Follow-ups:** the Call / WhatsApp / Email buttons only open the phone / WhatsApp / mail app — nothing is logged automatically; use **Log activity**. Follow-up notes and outcomes appear on the Follow-ups card and the Timeline, not in the Notes tab.
- **Follow-ups:** reminders go out every 5 minutes, so one can arrive up to about 5 minutes later than “15 minutes before”. A follow-up scheduled less than 15 minutes ahead is reminded at the next run.
- **Follow-ups:** Super Admin's own leads with no owner account and no agent get no reminder (nobody to notify). A disabled account receives no reminders.
- **Follow-ups:** there are no repeating follow-ups and no per-user reminder time; the 15-minute lead time is the same for everyone.

Test data: use made-up names and test emails / phones you control; never real customers. A new contact per capture test (old contacts merge into earlier leads). Do not import large files or use Delete Permanently on shared data. Use only a test Facebook Page; do not trigger real ads. Notifications — including follow-up reminders — send real emails to the account addresses — use test accounts.

8. Reporting a bug

Include: role and account (agency / agent / Super Admin), KYC and plan state, assignment mode and switches, lead ID, channel used, contact details used, exact steps, expected vs actual (exact message text), time, and a screenshot. For imports attach the uploaded file and the status file. For follow-ups add the follow-up type, due time (UAE), who the lead was assigned to, and when the reminder arrived (or did not). Mask any personal data.
