MW REALTY CRM · TESTER HANDBOOK · MODULE 03

Lead Insights

Ranking website leads by how they behave on the public site, and checking the numbers

Where: CRM sidebar › Leads › Lead Insights (`/crm/lead-insights`). **Who:** Super Admin (all leads), Agency, Agent. **Locks:** KYC approval required; the plan must include **Lead insights** (paid plans). Without it the page shows an “Unlock lead insights” card.

1. What this module does

Lead Insights lists the CRM leads that are linked to a tracked **website visitor** and shows, for each one, how many listings they viewed, how long they spent on the site, how many searches they ran, how many AI chats they had and when they were last active. Users sort the list to find the most engaged buyers, then open a lead's **Insights** tab for the full activity.

Totals strip

Leads with website activity, **Property views**, **Total time on site**, **Active this week** (with “· N AI chats”).

Search and sort bar

Search box “Name, email or phone”, sort list, filter (Apply) button and **Clear**.

Leads table

Columns: **Lead**, **Owner** (Super Admin only), **Stage**, **Property views**, **Time on site**, **Searches**, **AI chats**, **Last active**, and an **Insights** link. 20 rows per page.

Lead › Insights tab

Opened from any row. Shows the visitor's full activity: cards, Most Interested Properties, Activity Timeline, AI Chat History, What They Search For, Saved by Lead.

2. How it works (business rules)

Visitor browses the public site → Gives details (enquiry form, AI chat, customer sign-in) → Visitor linked to a CRM lead → Lead appears in Lead Insights

2.1 How a lead gets website activity

- The website remembers each browser with a long-lived cookie. Page views, listing views (with time spent), searches, favourites, saved searches, AI chats and enquiries are recorded for that browser.
- When the visitor gives an email or phone (property enquiry form, other website forms, AI chat details form) or signs in to a customer account, the activity is tied to that person. Activity they did **before** giving details in the same browser is attached to them too.
- A **property enquiry** form creates a CRM lead for the listing's owner and links it straight away.
- A lead from the AI chat or a general form first waits in Super Admin's **Website Leads** pool. It may be routed to an agency or agent later (for example after the visitor views the same owner's listings repeatedly), or transferred by Super Admin. Only then does it become a CRM lead of that account.
- If someone uses a **different email or phone** in the same browser, tracking switches to a different person. Signing out of a customer account stops tracking that person in that browser.
- Leads created by hand, imported from a file, or from Facebook / Property Finder have **no** website activity unless later linked by one of the routes above.

2.2 What the list shows

Item	Meaning
Leads with website activity	Number of leads in your scope that are linked to a website visitor. Same number as the **Website Insights** chip on the Leads list.
Property views (strip)	Total listing detail-page views of all those visitors.
Total time on site	Sum of time recorded for all their activity (shown like “1h 5m” or “3m 20s”).
Active this week	Visitors whose last activity was in the last 7 days. “· N AI chats” = chat conversations with at least one message.
Lead column	Initials, name (or “Unknown”) and email, or phone if no email, or “-”.
Owner column	Super Admin only: the account that owns the lead, or “Unassigned”.
Stage	CRM stage with its colour, or “-”.
Property views (row)	Number of listing views, and below it “N listings” = how many different listings.
Time on site	Total time, with a small heat bar relative to the highest value on the current page.
Searches / **AI chats**	Filtered searches run; chat conversations with at least one message.
Last active	Time since the visitor was last seen (e.g. “5 minutes ago”), or “—”.

2.3 Search, sort and paging

- **Search** matches name, email or phone (partial text). It runs about a third of a second after you stop typing; Enter or the filter button also runs it. Maximum 100 characters.
- **Sort** options: **Recently active** (default), **Most time on site**, **Most property views**, **Most AI chats**. Highest first. Ties: newest lead first.
- **Clear** appears when a search or a non-default sort is set; it resets both.
- 20 rows per page. Paging shows **Previous**, “page / last”, **Next** only when there is more than one page.
- The totals strip always shows **all** your website-linked leads; it does not change with the search.
- Clicking a row (or the name or **Insights**) opens the lead at `/crm/leads/<id>#insights`.

2.4 The Insights tab on a lead (destination)

Section	Meaning
Cards	**Time on site** (“N pages viewed”), **Property views** (“N listings · time”), **Searches** (“N saved”), **Favorites** (“customer account” or “not signed in”), **AI chats** (“N messages”), **Form enquiries** (“website forms”).
Footer line	Engagement label **Hot lead**, **Warm lead** or **Cold lead** (from views, time, chats, enquiries and saves); “First seen”; “Last active”; “Came in via …”.
Most Interested Properties	Listings ranked by time spent, with views, owner and “last viewed”. Empty: “No property detail pages viewed yet.”
Activity Timeline	Newest first, grouped by day. **Key events** (default) hides plain page views; **All activity** shows them. Loads more as you scroll. Empty: “No activity tracked yet.” or “No key events yet — switch to All activity to see page views.”
AI Chat History	One row per conversation (date, “N messages”). Expand to read messages and suggested listings. Empty: “No AI chat conversations.”

Section	Meaning
What They Search For	Search criteria as chips, “×N” when repeated. Empty: “No filtered searches yet.”
Saved by Lead	Favourite listings and saved searches (need a signed-in customer account).

A lead with no website link shows “No website activity for this lead” and “This one came in via <channel>.” on its Insights tab. The Insights tab itself is part of Leads and is not plan-locked; only this Lead Insights list is.

3. Who can do what

Action	Super Admin	Agency	Agent
Open Lead Insights	**Yes**	**Approved + plan with Lead insights**	**Approved + plan with Lead insights (agency's plan if on it)**
Leads listed	**All accounts**	**Leads the agency owns**	**Own leads + agency leads assigned to the agent**
Owner column	**Yes**	**No**	**No**
Open a lead's Insights tab	**Yes**	**Yes (own scope)**	**Yes (own scope)**

State	Sidebar	Page
KYC pending	Padlock, tooltip “Unlocks after KYC approval”.	Error message “Your account is pending Super Admin approval.” No data is listed.
Plan without Lead insights (own plan)	Padlock, tooltip “Upgrade your plan to unlock this”.	Card **Unlock lead insights**: “See how your website leads behave on the site — listings they view, time spent, searches and AI chats. Lead insights isn't included in your <plan> plan.” with **View Plans** button.
Agent on agency plan without Lead insights	Padlock.	Same card, text “Lead insights isn't included in <Agency>'s <plan> plan. Ask your agency to upgrade.” No View Plans button.
No plan at all	Padlock.	Card text says “… your current plan.”

Which plans include Lead insights is set by Super Admin in the plan settings. The Plans page lists it as a feature of each plan.

4. Fields and validation

Field	Required	Rules
Search	No	Up to 100 characters; spaces at the ends are ignored. Partial match on name, email or phone.

Field	Required	Rules
Sort	No	One of the 4 options. An unknown value falls back to Recently active.

5. Test scenarios

Priority: **High** core flow / data / access · **Medium** · **Low** cosmetic. Use a **fresh private window** for the public-site side and a unique test email such as `qa.li+01@example.com`.

	Scenario	Steps	Expected result
LI-01	**Open with access** High	1. Sign in as an approved Agency whose plan includes Lead insights. 2. Sidebar › Lead Insights.	Page title “Lead Insights”, totals strip, search/sort bar and table load. No padlock on the menu item.
LI-02	**Plan lock (own plan)** High	1. Sign in as an approved Agency on a plan without Lead insights. 2. Hover the menu item, then open it.	Padlock tooltip “Upgrade your plan to unlock this”. Page shows **Unlock lead insights** card naming the plan, and **View Plans**, which opens Plans.
LI-03	**Plan lock (agency plan)** Medium	1. Sign in as an agent working under that agency's plan. 2. Open Lead Insights.	Card text “… isn't included in <Agency>'s <plan> plan. Ask your agency to upgrade.” No View Plans button.
LI-04	**Upgrade unlocks** Medium	1. Super Admin adds Lead insights to the test plan (or the account moves to such a plan). 2. Reload the CRM.	Padlock gone; the list loads.
LI-05	**KYC pending** High	1. Sign in as a partner not yet approved. 2. Open Lead Insights.	Padlock tooltip “Unlocks after KYC approval”. Error message “Your account is pending Super Admin approval.”; no leads are shown.
LI-06	**Super Admin global view** High	1. Open Lead Insights from Admin › CRM.	No lock. Extra **Owner** column. Leads of all accounts are listed. Intro reads “How website leads behave …” (not “your website leads”).
LI-07	**Create a website lead via property enquiry** High	1. Private window: open the public site, view 2–3 listings of the test agency for at least 30 s each. 2. On one listing submit the enquiry form with the test name/email/phone. 3. In the CRM (that agency) open Lead Insights and search the email.	The lead is listed. Property views ≥ the views you made; “N listings” = distinct listings; Time on site > 0; Last active “a few minutes ago”.
LI-08	**Activity before giving details** Medium	1. In LI-07, note the listings viewed before the form. 2. Open the lead's Insights tab.	Those earlier views appear in Most Interested Properties and the Activity Timeline.
LI-09	**More activity updates the row** High	1. Same private window: view another listing, run a filtered search, open the AI chat and send a message. 2. Reload Lead Insights.	Property views +1, Searches +1, AI chats +1 (if a new conversation), Last active updated. Totals strip increases accordingly.

	Scenario	Steps	Expected result
LI-10	**AI chat lead (Website Leads pool)** Medium	1. New private window: start the AI chat and give a new test email when asked. 2. Check the agency's Lead Insights; then check Super Admin › Website Leads.	The visitor is in Super Admin's Website Leads. It appears in an agency's Lead Insights only after it is routed or transferred to that agency.
LI-11	**Manual lead not listed** High	1. Create a lead by hand in Leads. 2. Search it in Lead Insights. 3. Open its Insights tab.	Not found: “No leads match your search.” The tab shows “No website activity for this lead … This one came in via …”.
LI-12	**Count matches Leads chip** High	1. Note **Leads with website activity**. 2. In Leads, read the **Website Insights** chip count.	Same number for the same account.
LI-13	**Search by name / email / phone** High	1. Type part of a test lead's name; then email; then phone.	List filters automatically after a short pause; matching leads only. Totals strip unchanged. **Clear** button appears.
LI-14	**Search no match** Medium	1. Search “zzzz-no-match”.	Message “No leads match your search.”
LI-15	**Search length limit** Low	1. Paste 150 characters.	The box accepts only 100 characters. No error.
LI-16	**Sort options** High	1. Choose each sort: Recently active, Most time on site, Most property views, Most AI chats.	List reloads at page 1 and is ordered by that column, highest / most recent first. Choosing a non-default sort shows **Clear**.
LI-17	**Clear** Medium	1. Set a search and a sort. 2. Click **Clear**.	Search empty, sort back to Recently active, page 1, Clear button hidden.
LI-18	**Pagination** Medium	1. Use an account with more than 20 website leads (or Super Admin). 2. Click Next, then Previous.	20 rows per page; “2 / N” shown; Previous disabled on page 1, Next disabled on last page; no lead repeats between pages.
LI-19	**Open a lead** High	1. Click a row (not on a link). Go back. Click the name. Go back. Click **Insights**. Also press Enter on a focused row.	Each opens the lead with the **Insights** tab selected (URL ends `#insights`). Row values match the tab's cards.
LI-20	**Agency vs agent scope** High	1. As Agency, assign a website lead to Agent A. 2. Sign in as Agent A (with access) and as Agent B.	Agent A sees the lead; Agent B does not. The agency sees all its own website leads.
LI-21	**Account isolation** High	1. Create a website lead for Agency Y's listing. 2. Check Agency X's Lead Insights.	Not visible to X; visible to Y and Super Admin.
LI-22	**Identity switch** Medium	1. In the same private window submit a second enquiry with a different email. 2. Browse more listings.	New activity goes to the second person's lead; the first lead's counts stop growing.

	Scenario	Steps	Expected result
LI-23	**Favorites and saved searches** Medium	1. Sign in as a test customer with the same email; add a favourite and save a search. 2. Open the lead's Insights tab.	Favorites +1 (“customer account”), Searches “N saved” +1, items listed under Saved by Lead.
LI-24	**Timeline filters and scroll** Medium	1. On a busy lead's Insights tab, switch Key events / All activity. 2. Scroll the timeline and chat list.	All activity adds page views; more items load on scroll without duplicates; counts in the header change with the filter.
LI-25	**Empty state** Medium	1. Approved account with access but no website leads.	Totals all 0 / “0s”. Table message “No leads with website activity yet — they appear here once website visitors (AI chat, enquiry forms, customer accounts) become your leads.”
LI-26	**Mobile width** Low	1. Set browser width to 375 px.	Totals and filter bar stack; table scrolls sideways inside its card; page itself has no horizontal scroll.

6. Expected results checklist

- [ ] Only leads linked to a website visitor are listed.
- [ ] Leads with website activity equals the Website Insights chip in Leads.
- [ ] Row values match the lead's Insights tab and the actions performed.
- [ ] Search, the 4 sorts, Clear and paging work and reset to page 1.
- [ ] Scope: Super Admin all, agency own, agent own + assigned; never another account's leads.
- [ ] Plan lock shows the Unlock card with the right wording (own plan vs agency plan).
- [ ] KYC pending shows the padlock and the approval message.
- [ ] Empty and no-match states show the documented texts.

7. Known behaviour (not bugs)

Note:

- Tracking is tied to one browser and one identity. Changing browser, clearing cookies, or using another email/phone starts or switches to a different visitor.
- Automated browsers or tools without a normal browser identity may not be tracked.
- Activity is saved as it happens, but the list does not refresh itself. Reload the page.
- The totals strip ignores the search box.
- AI chats count only conversations with at least one message.
- The Hot / Warm / Cold label appears on the Insights tab, not in this list.
- AI chat and general-form leads stay in Super Admin's Website Leads pool until routed or transferred, so a partner may not see them yet.
- Time on a page is the time the page was visible. It is saved when the visitor leaves the page or switches tab, so time for the page still open may not show yet. One page view counts at most 4 hours.

Test data: use test emails and phone numbers only. Do not type real personal data into the public enquiry forms or AI chat. Sign out of test customer accounts when done.

8. Reporting a bug

Include: role and account, KYC state, plan, lead ID, the test email/phone used on the website, browser and whether it was a private window, the exact website actions with times, the value shown vs expected (list and Insights tab), and screenshots.
