MW REALTY CRM · TESTER HANDBOOK · MODULE 15

Nearby Places

Landmarks (schools, hospitals, malls, metro stations…) that listings are tagged with, and how they show on the public property page

Where: CRM sidebar › Listings › **Nearby Places** (`/crm/nearby-places` , `/crm/nearby-places/create` , `/crm/nearby-places/{id}/edit`). Used in the property form tab **Nearby Places**.
Who: Super Admin, Agency and Agent.
Locks: Locked for Agency / Agent until KYC approval (padlock, “Unlocks after KYC approval”). No plan lock.

1. What this module does

Nearby Places is one shared list of landmarks. Each place has a **type** (School, Hospital, Metro Station…), a **name** and optional **address** in every active website language, and **map coordinates**. Listings are tagged with places in the property form. The public property page then shows the tagged places on a map in its **Location & Nearby** section, grouped by type, with the distance from the property.

List

Tabs **All** / **My Places** / **Shared**. Columns **#**, **Name**, **Type**, **Address**, **Added By**, **Properties**, **Status**, **Actions**. Button **Add Place**.

Add / Edit form

Type, a language tab per active language with **Name** and **Address**, **Latitude**, **Longitude**, **Active** switch, **Save Place** / **Cancel**.

Property form › Nearby Places

Type → **Place** picker with **Add**, chips of chosen places, links **New Place** and **Manage**.

2. How it works (business rules)

Add place (type, name, coordinates) → Tag it on a listing (property form) → Save listing → Shown on the public property page map

- **Everyone sees and uses every place.** The list shows places added by Super Admin, by your account and by other agencies / agents. Any place can be tagged on any listing.
- **Only the creator can change a place.** Edit, the status switch and delete are shown only for your own places. Other rows show a padlock with tooltip “Only MW Realty can change this place” (shared) or “Only the one who added it can change this place”, and a plain **Active** / **Inactive** text. Super Admin can manage every place.
- **Added By:** places added by Super Admin show **Shared**; your own show **You**; others show the agency / agent name. Each person's own account counts: an agency's agent and the agency are different owners.
- **Order:** account places first, Shared places last; within that, by type. 20 per page.
- **Types** come from Super Admin's list under Master › Property Options (list “Nearby Place Type”). Super Admin sees a **Manage types** link next to Type. Others see “Missing a type? Ask MW Realty to add it via a support ticket.”
- **Status:** only **Active** places appear in the property form picker and on the public page. Switching a place off hides it from the public page of every listing tagged with it, but does not remove the tag.
- **Delete:** allowed only when no listing is tagged with the place. If it is tagged, the delete button is greyed out with tooltip “Tagged on N property/properties — remove it from those first, or switch it off”. The server gives the same message if forced.

- **Properties** column = number of listings (any owner) tagged with the place.
- **Public page:** the **Location & Nearby** map shows only when the listing itself has map coordinates. Places are grouped by type in Super Admin's type order, each with distance from the listing (“350 m” under 1 km, “2.4 km” above), nearest first. Name and address follow the visitor's language (English used when a translation is missing). The page may take up to about 3 minutes to reflect a change that did not edit the listing itself (cache).

3. Who can do what

Action	Super Admin	Agency	Agent
View list (all places)	**Yes**	**Yes**	**Yes**
My Places tab	**No (no own account)**	**Yes**	**Yes**
Add place	**Yes – saved as Shared**	**Yes – own**	**Yes – own**
Edit / switch on-off / delete	**Any place**	**Own only**	**Own only**
Manage place types	**Master › Property Options**	**No**	**No**
Tag places on a listing	**Yes**	**Yes**	**Yes**
KYC pending	n/a	**Locked; page shows “Your account is pending Super Admin approval.”**	**Same**

4. Fields and validation

Field	Required	Rules / limits
Type	Yes	One of the types in the list (“Select type” is not allowed). Max 100.
Name (each language tab)	Yes, in every active language	Max 255 characters. If a required name is empty on a hidden tab, the form switches to that tab.
Address (each language)	No	Max 1000 characters.
Latitude	Yes	Number between -90 and 90.
Longitude	Yes	Number between -180 and 180.
Active	No	On by default for a new place.

Server errors are shown in a red list at the top and under the field. Success toasts: “Nearby place added.” / “Nearby place updated.”

5. Test scenarios

Priority: **High** core flow / data loss / access · **Medium** · **Low** cosmetic. Use two approved accounts (A and B), Super Admin, and a test listing with map coordinates.

	Scenario	Steps	Expected result
NP-01	**Open list** High	1. Sign in as approved Agency A; click **Nearby Places**.	Tabs All / My Places / Shared; table with the 8 columns; **Add Place** button. Shared places appear after account places.
NP-02	**Add a place** High	1. Click **Add Place**. 2. Type = School; Name (each language tab) = “QA Test School”; Latitude 25.2048; Longitude 55.2708. 3. Click **Save Place**.	Toast “Nearby place added.”; back on list; row shows Type School, Added By **You**, Properties 0, switch on.
NP-03	**Required fields** Medium	1. Leave Type at “Select type” and save. 2. Fill Type, leave the Arabic (second) tab Name empty and save.	Save blocked. For the empty name the form jumps to that language tab and highlights the field.
NP-04	**Coordinates out of range** Medium	1. Latitude 95, Longitude 200; save. 2. Latitude “abc”; save.	Red errors: latitude must be between -90 and 90; longitude between -180 and 180; latitude must be a number. Nothing saved.
NP-05	**Long text limits** Low	1. Enter a 256-character name; save.	Error under Name (max 255). Address accepts up to 1000.
NP-06	**Edit own place** High	1. Click the edit icon on your place. 2. Change name and address; save.	Form opens “Edit Nearby Place” with saved values per language. Toast “Nearby place updated.”; list shows new name.
NP-07	**Switch off / on** High	1. Toggle the Status switch of your place off, reload, then on.	Status persists after reload. If the request fails the switch returns to its previous position with toast “Could not update the status.”
NP-08	**Delete unused place** High	1. Click trash on an own place with Properties 0. 2. Confirm **Delete** in “Delete this nearby place?”.	Row removed. Cancel in the dialog keeps it.
NP-09	**Delete blocked when tagged** High	1. Tag your place on a listing (NP-13). 2. Back on Nearby Places hover the trash icon.	Properties column shows 1; trash greyed out with tooltip “Tagged on 1 property — remove it from those first, or switch it off”.
NP-10	**Other account's place** High	1. As Account B open Nearby Places and find A's place. 2. Type `/crm/nearby-places/{A's id}/edit`.	Row shows A's name in Added By, plain Active/Inactive text and a padlock; no edit / trash. Direct edit URL shows an error and no form data; nothing can be saved.
NP-11	**Shared place for non-admin** Medium	1. As Agency open **Shared** tab.	Only Super Admin places, Added By **Shared**, padlock tooltip “Only MW Realty can change this place”.

	Scenario	Steps	Expected result
NP-12	**Tabs filter** Medium	1. Click **My Places**, then **Shared**, then **All**.	URL gets `?scope=mine` / `?scope=shared`; rows match the tab; numbering (#) restarts per page.
NP-13	**Tag a place on a listing** High	1. Edit a test listing › tab **Nearby Places**. 2. Choose Type School, Place “QA Test School (my place)”, click **Add**; save the listing.	Place list loads after choosing a type (“Loading...” then “Select place”). Chip appears; after save and reopen the chip is still there. Same place cannot be added twice.
NP-14	**Picker empty / inactive** Medium	1. Choose a type with no places. 2. Switch a place off and look for it in the picker.	“No places of this type yet”. Inactive places are not offered.
NP-15	**Use another account's place** Medium	1. As Account B tag A's place and a Shared place on B's listing; save.	Allowed; both saved on B's listing. A's place is listed with the “(my place)” suffix (any account place has it, see section 7); the Shared place has none. Properties count of A's place goes up by 1.
NP-16	**Public page display** High	1. Open the public page of the tagged, active listing (has map coordinates). 2. Go to **Location & Nearby**.	Map with markers for the places, grouped by type with the type labels; each shows distance (m / km), nearest first; hovering a marker shows name, type and distance.
NP-17	**Inactive place hidden publicly** High	1. Switch the tagged place off. 2. Reload the public page (wait up to 3 min if needed).	Place no longer on the map/list. CRM listing still has it tagged. Switching on brings it back.
NP-18	**Listing without coordinates** Medium	1. Tag places on a listing that has no map location; open its public page.	No nearby map section for that listing (map shows only when the listing has coordinates).
NP-19	**Language** Medium	1. Give the place different names per language. 2. View the public page in each language.	Name / address shown in the visitor's language.
NP-20	**Remove tag, then delete** Medium	1. Remove the chip from the listing and save. 2. Delete the place.	Properties drops to 0; trash becomes active; delete succeeds.
NP-21	**Super Admin adds / manages** High	1. Open CRM from Admin; Add Place. 2. Edit and switch off an agency's place.	New place shows Added By **Shared**. Super Admin can edit / toggle / delete any place. **Manage types** link opens Master › Property Options in a new tab. No **My Places** tab.
NP-22	**New type appears** Medium	1. Super Admin adds an active type in Master › Property Options › Nearby Place Type. 2. Agency opens Add Place.	New type is in the Type list and in the property form Type picker. Non-admin sees the hint “Missing a type? Ask MW Realty to add it via a support ticket.”
NP-23	**KYC-pending** High	1. Sign in as a not-approved account; check sidebar and open `/crm/nearby-places`.	Padlock “Unlocks after KYC approval”; page shows “Your account is pending Super Admin approval.” with **Try again**.
NP-24	**Empty state** Low	1. On **My Places** with no own places.	“No nearby places yet. Add your first one.” with link to the form.

	Scenario	Steps	Expected result
NP-25	**Pagination** Low	1. With more than 20 places, go to page 2.	20 per page; # continues (21, 22…); URL keeps the tab.
NP-26	**Cancel** Low	1. Change fields on edit; click **Cancel**.	Back to list; nothing saved.
NP-27	**Mobile width** Low	1. Open list and form at ~375 px; open public map on phone.	Table scrolls inside its card; form fields stack; map usable.

6. Expected results checklist

- [ ] All places visible to all approved users; only the creator (or Super Admin) can edit, switch or delete.
- [ ] Name is required in every active language; coordinates within range.
- [ ] A place tagged on any listing cannot be deleted.
- [ ] Only active places appear in the picker and on the public property page.
- [ ] Public page groups places by type with correct distances, only for listings with coordinates.
- [ ] KYC-pending accounts are locked out.

7. Known behaviour (not bugs)

By design:

- Places added by other agencies / agents are visible and usable by everyone; this is a shared landmark list.
- In the property form picker, “(my place)” marks any place added by an agency or agent account (not only yours); Shared places have no suffix.
- An agency cannot edit places its agents added, and the reverse.
- Switching a place off keeps it tagged on listings; it is only hidden.
- Public page changes can take up to about 3 minutes to appear.

Test-data cautions: prefix every test place with “QA” and delete it afterwards (remove tags first). Do not edit or switch off Shared places on a live site as Super Admin — every listing using them is affected.

8. Reporting a bug

Include: role and account, place ID and name, listing reference, language, steps, expected vs actual, time, screenshot (and the public page URL if relevant). Use test data only.
