SYSTEM OVERVIEW

MW Realty Property Portal & CRM

A UAE real-estate marketplace with a built-in CRM for agencies and agents, and an administration console for the platform operator.

01 Brief Description

MW Realty is an online real-estate portal for the UAE. Buyers and tenants search residential and commercial listings on the public website. Licensed agencies and brokers publish those listings and manage the enquiries they receive in a built-in CRM. The MW Realty team runs the platform from an administration console.

PUBLIC WEBSITE

Search & enquire

Listing search with list and map views, property details, comparison, mortgage and cost calculators, market insights and an AI assistant. Available in English and Arabic, in multiple currencies.

PARTNER CRM

List & follow up

Agencies and agents publish listings, work leads through a pipeline, manage their team, run promotions and view reports.

ADMINISTRATION

Verify & operate

Partner KYC approval, listing permit and listing review, plans and payments, website content, SEO, and staff roles.

How a listing and an enquiry move through the system

1. Onboarding
The agency or agent registers and uploads licence documents (trade licence, ORN, BRN). MW Realty approves the KYC.

2. Listing
The partner creates a listing and enters its DLD advertising permit number, expiry and QR code.

3. Review
The Super Admin checks the permit and the listing details, then approves the listing or sends it back.

4. Publication
The listing goes live on the website and shows its permit details.

5. Lead
Visitor enquiries become leads and go to the listing's agency or agent automatically.

Listing compliance. MW Realty does not issue advertising permits. It records the permit the brokerage obtained from DLD (Trakheesi), with the Madmoun QR code and RERA Form A, and checks them. Only after approval can a listing appear on the website. Each permit number can be used on one listing only. Listings with an expired permit are taken off the website automatically every night, and the partner is notified 7 days before expiry. If the permit, price, purpose, type, bedrooms or size of an approved listing changes, the listing goes back for review. The system also checks every saved listing for duplicates of the same unit listed by another agency.

Main capabilities

Area	Capabilities
Listings	Residential and commercial listings for sale and rent, Premium (featured) listings, sold and rented history, import from Excel / CSV and Property Finder, AI-assisted descriptions, watermarking
Leads	Capture from every website form, the AI chat, Facebook Lead Ads and imports. Automatic routing (owner, assigned agent, round robin). Merging of duplicates, pipeline stages, follow-ups and reminders
Partner management	KYC verification, agency teams and memberships, subscription plans, prepaid credits, two-factor authentication
Insights	Dashboard, reports, lead, property and agent insights, advertisement impression and click reports
Website content	Pages, banners, blogs, market insights, careers, landing pages, translations, currencies and SEO, all managed without code changes
Mobile apps	Token-authenticated APIs for a customer app and an agent app on the same backend

02 Tech Stack & Architecture

One Laravel (PHP) application serves the public website, the partner CRM, the administration console and the mobile APIs. All four share one database and one set of business rules.

Layer	Technology
Backend language & framework	PHP 8.5, Laravel 13
Public website & CRM	Vue 3 single-page applications with Vue Router, Tailwind CSS 4, built with Vite 7
Administration console	Server-rendered Laravel Blade with Bootstrap 5. Role and permission based access
APIs	REST / JSON. Laravel Sanctum bearer tokens for mobile apps, session authentication for the web CRM. OpenAPI documentation generated with Scribe
Database	MySQL
Background processing	Laravel queues and scheduler for emails, notifications, imports, permit expiry, Premium start and end, and credit expiry
Maps	Leaflet and MapLibre GL
Payments	Stripe for plan subscriptions and credit purchases. Card data is held by Stripe and never stored by MW Realty

Layer	Technology
Media storage	Cloudinary, or local server storage. KYC and permit documents are kept on private storage
Integrations	Facebook Lead Ads, Property Finder (listing import), Google sign-in (customers), Google Gemini AI (chat assistant, descriptions), email service, currency rate feed
Documents & files	DomPDF (invoices), Laravel Excel (imports and exports), QR code generation (2FA)

Architecture

Component	Entry point	Used by
Public website	/	Visitors and customers
Partner CRM	/crm	Agencies, agents and the Super Admin
Administration console	/admin	Super Admin and MW Realty staff
Website & customer API	/api	Website and customer mobile app
CRM API	/api/crm	Web CRM and agent mobile app

Security

Control	Implementation
Partner verification	Most CRM modules stay locked until the account's KYC is approved by the Super Admin
Two-factor authentication	Authenticator app (TOTP) with recovery codes for CRM accounts. An email code is required on new devices. Agencies can make 2FA compulsory for their agents
Data separation	Each agency sees only its own and its team's data. Each agent sees only their own and assigned records
Staff access	Role and permission model in the administration console. Only the Super Admin can change roles and permissions
Abuse protection	Rate limits on sign-in, verification codes, sign-up, forms and the AI chat. Rich text is sanitised

03 User Roles & Logins

There are seven roles across three sign-in points. Partners and customers sign in on the website login page. MW Realty staff sign in to the administration console.

Role	Sign-in	Area
Visitor	No sign-in	Public website
Customer (User)	/login, User tab, or Google	Public website and customer profile
Agency (company)	/login, Agent / Agency tab	Partner CRM
Independent agent	/login, Agent / Agency tab	Partner CRM
Agency agent	/login, Agent / Agency tab	Partner CRM, within the agency's plan
Super Admin	/admin/login	Administration console and a global view of the CRM
Admin staff (sub-admin)	/admin/login	Administration console, limited by role permissions

Visitor

PUBLIC

Searches and views listings, compares properties, uses the calculators and market insights, asks the AI assistant, and sends enquiries and viewing requests. An enquiry creates a lead for the listing's agency or agent.

Customer

REGISTERED BUYER / TENANT

Everything a visitor can do, plus a personal profile with a wishlist, saved searches, their enquiry history and account settings. Customers have no access to the CRM or the administration console.

Agency

COMPANY ACCOUNT

Owns the subscription plan, credits, listings and leads. Adds or invites agents and approves join requests. Sets round-robin lead assignment and can make 2FA compulsory for its agents. Sees its own and its team's data. Most modules unlock after KYC approval.

Independent agent

BROKER ACCOUNT

Works like an agency for their own business, with their own plan, credits, listings, leads and advertisements, but has no team.

Agency agent

TEAM MEMBER

A broker who belongs to an agency. Works the leads and listings assigned to them, uses the agency's plan, and cannot buy plans, credits or advertisements. Membership needs approval from both the agency and MW Realty.

Super Admin

PLATFORM OPERATOR

Full access to the administration console. Approves partner KYC and memberships, reviews listing permits, listings and advertisements, and manages plans, payments and website content. Can view every account's data in the CRM. Only the Super Admin can create staff users and roles.

Admin staff (sub-admin)

MW REALTY EMPLOYEE

Uses only the console menus their role allows, for example blogs, enquiries or SEO. The Super Admin defines each role from view, create, edit and delete permissions per module. Staff roles never get access to the CRM.

04 Screenshots & Walkthrough

The main screens for each role, taken from the QA environment with test data. Personal details of enquirers are hidden.

VISITOR & CUSTOMER

Public website

No sign-in is needed to search and enquire. A customer who signs in also gets a personal profile.

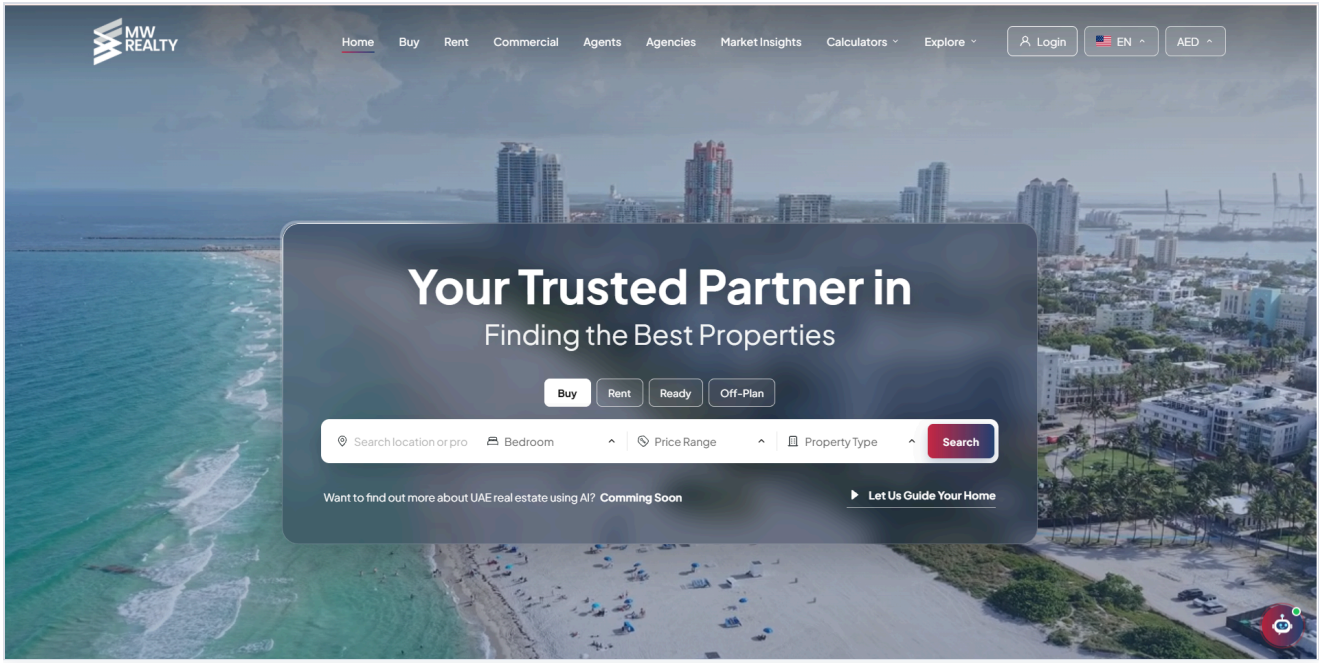

Figure 1. Home page. Search by location, bedrooms, price range and property type, for sale or rent, ready or off-plan. The visitor can switch language and currency at the top, and the AI assistant opens from the bottom right.

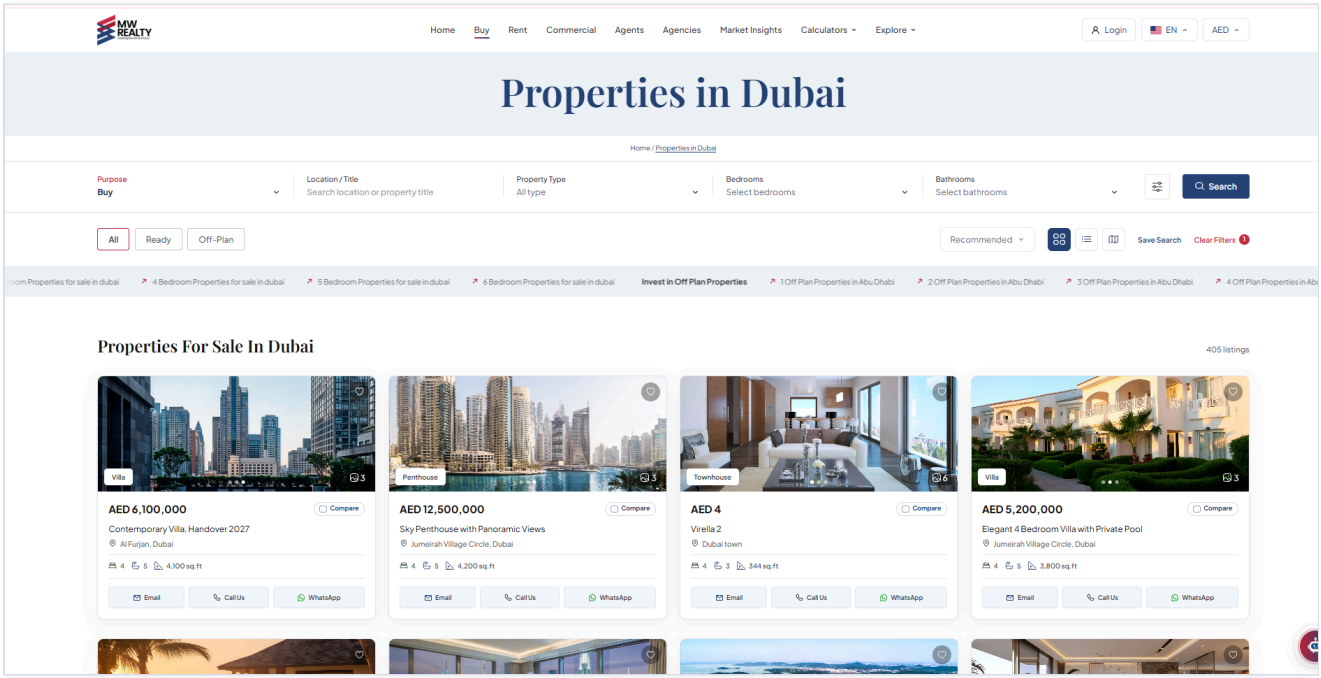

Figure 2. Property search. Filter by purpose, location, type, bedrooms and bathrooms. Results show as a grid, a list or a map. Visitors can save a search, add listings to Compare, and contact the agent by email, phone or WhatsApp.

Figure 3. Property details. Photos, price and key facts, with tabs for Overview, Price & Availability, Gallery, Location & Nearby, Mortgage & Investment and Market Insights. The agency that listed the property is shown beside the details.

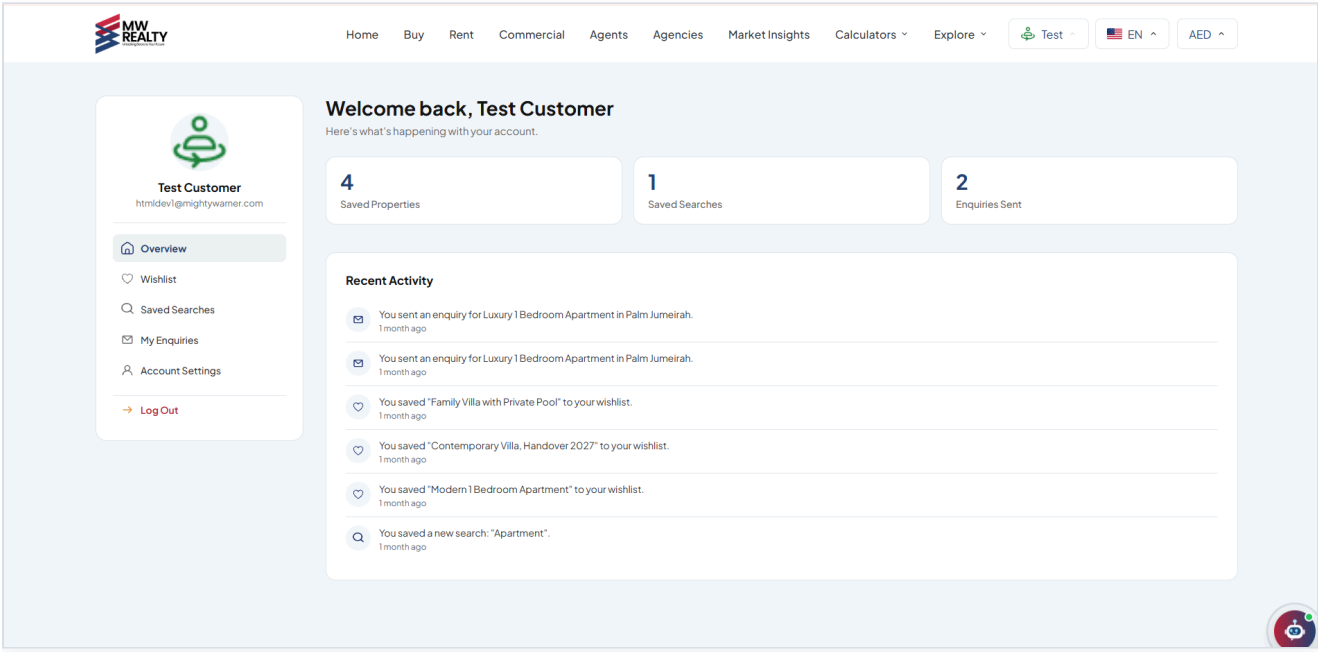

Figure 4. Customer profile (signed in). Saved properties, saved searches and enquiries sent, with recent activity. The menu gives access to Wishlist, Saved Searches, My Enquiries and Account Settings.

AGENT Partner CRM

This agent belongs to an agency and works under the agency's plan. The menu has My Agency, but no Agents or Advertisements.

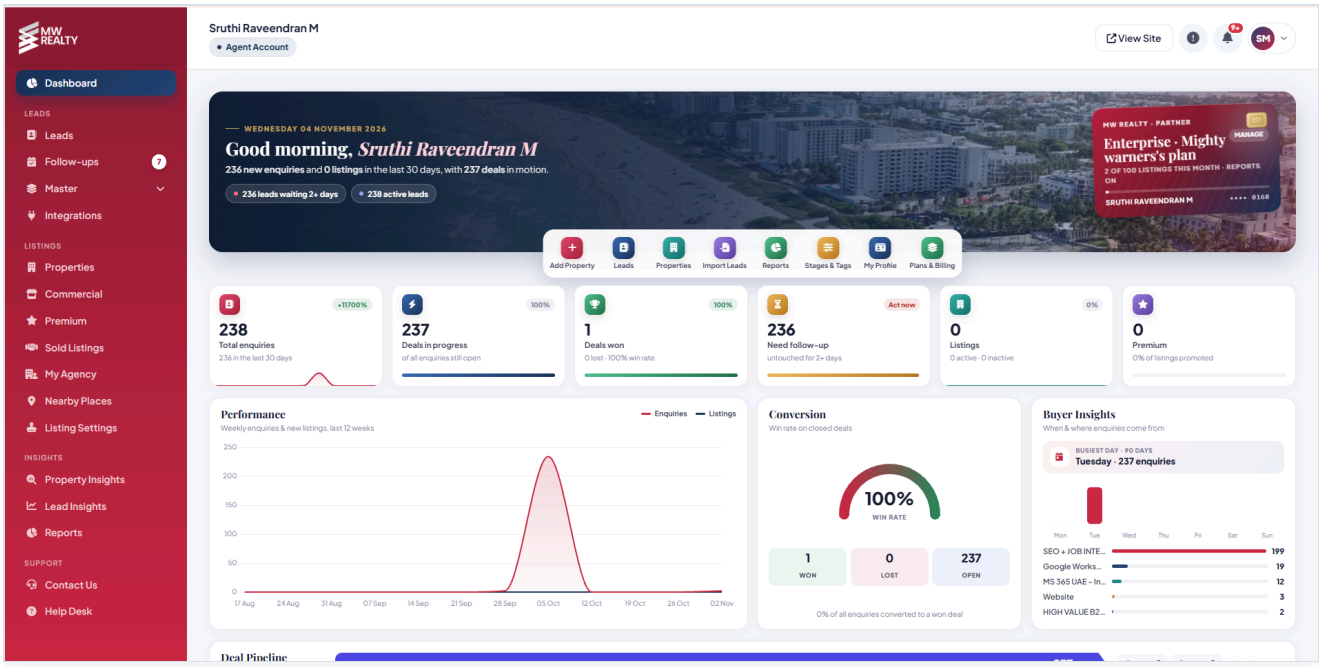

Figure 5. Agent dashboard. Enquiries, deals in progress, deals won, leads that need follow-up, listings and Premium listings, with weekly performance, win rate and lead sources. The plan card shows the agency plan the agent works under.

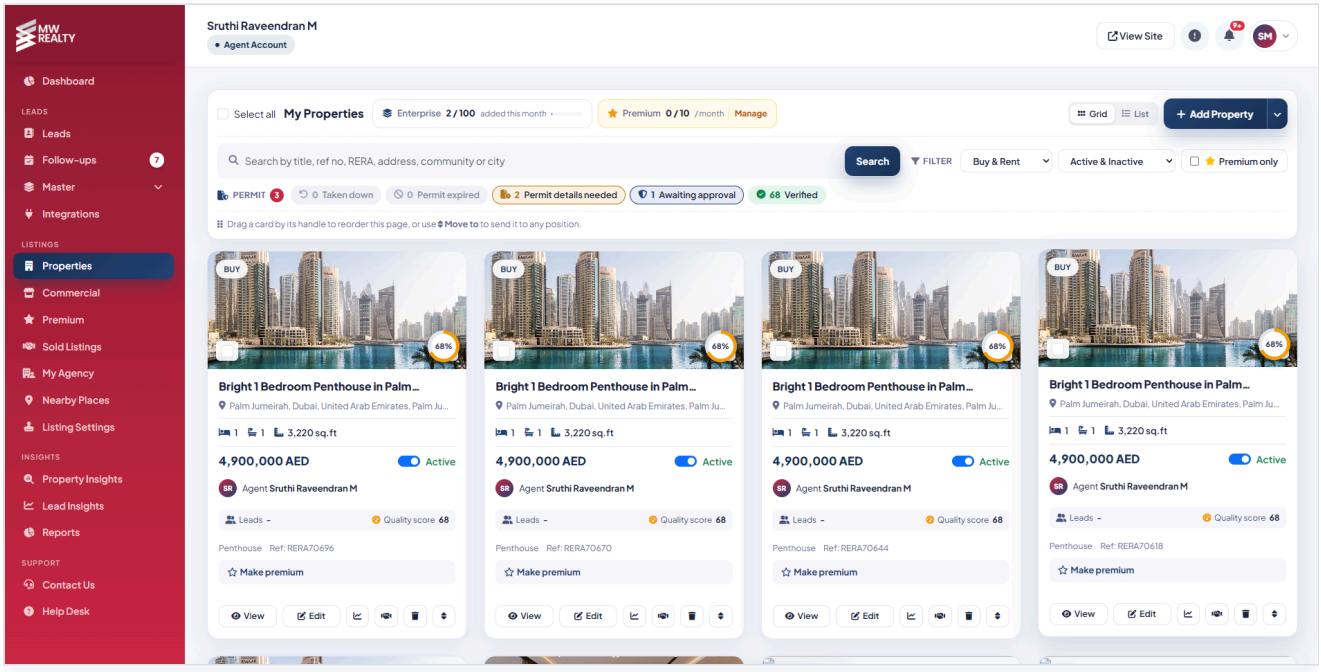

Figure 6. Agent properties. The agent's listings with plan usage and Premium quota. The permit strip counts listings that are taken down, have an expired permit, still need permit details, are awaiting approval, or are verified. Each card shows the live status and a quality score.

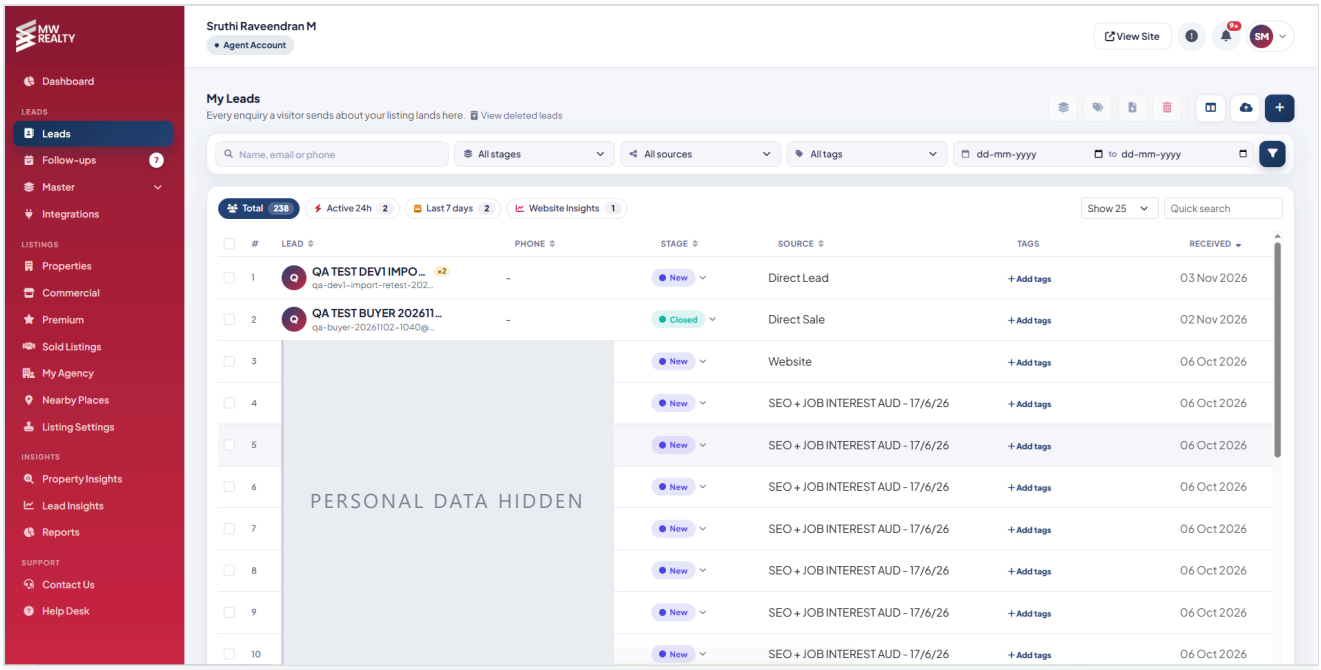

Figure 7. Agent leads. Every enquiry on the agent's listings, with stage, source, tags and date received. Leads can be filtered by stage, source, tag and date.

AGENCY Partner CRM

The company account sees its whole team's data. It also has Agents, Advertisements, Agent Insights and a credits wallet.

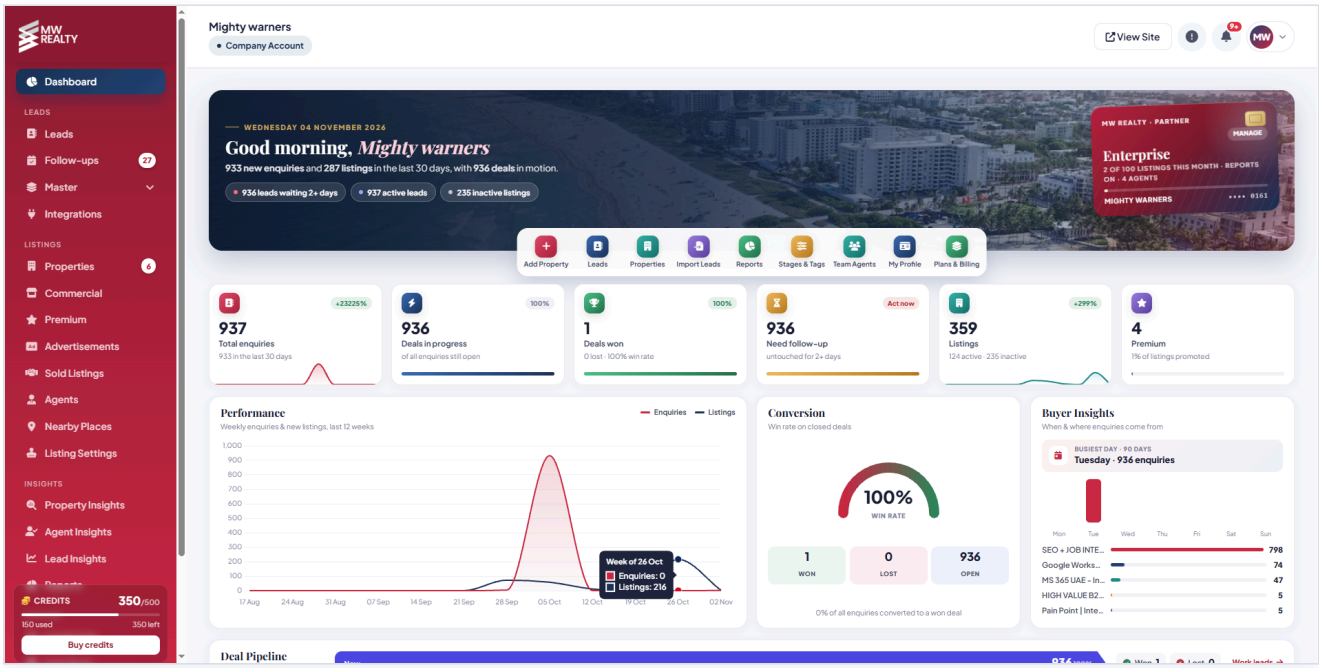

Figure 8. Agency dashboard. The same overview as an agent's, covering the whole agency. It also shows the plan (listings this month, reports, number of agents) and the credit balance.

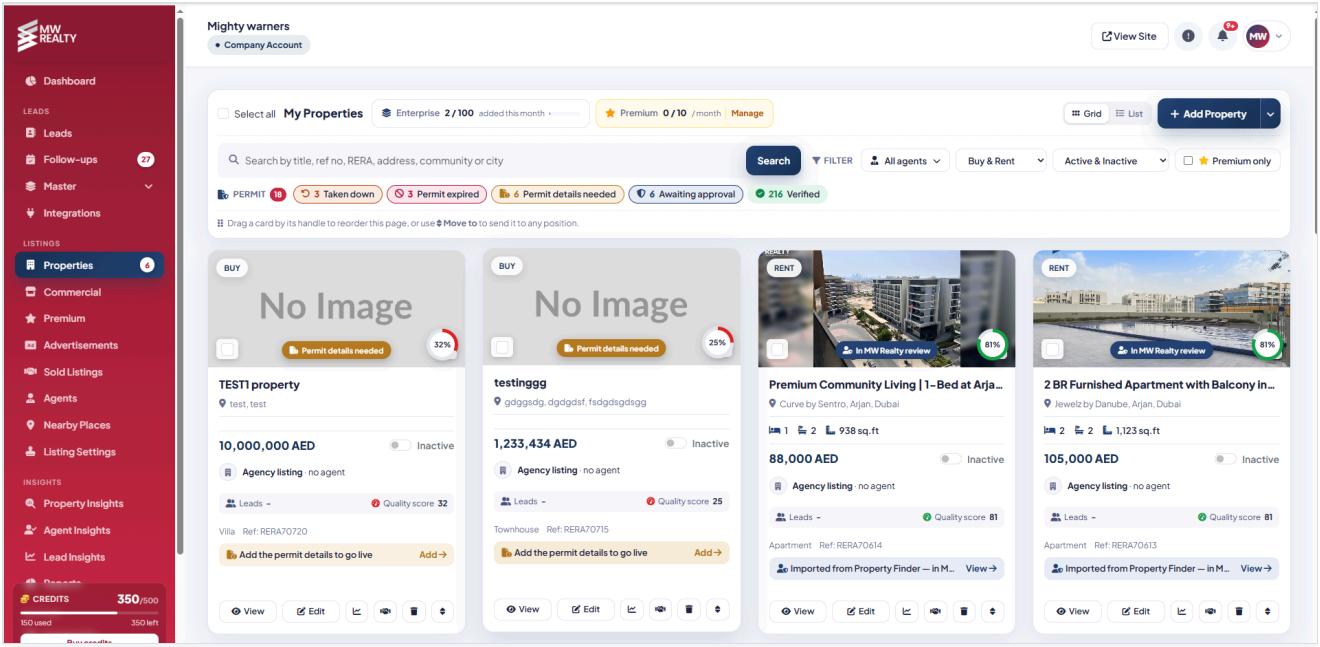

Figure 9. Agency properties. All of the agency's listings, filterable by agent. A listing without permit details shows "Add the permit details to go live" and stays offline. Listings imported from Property Finder show "In MW Realty review" until they are approved.

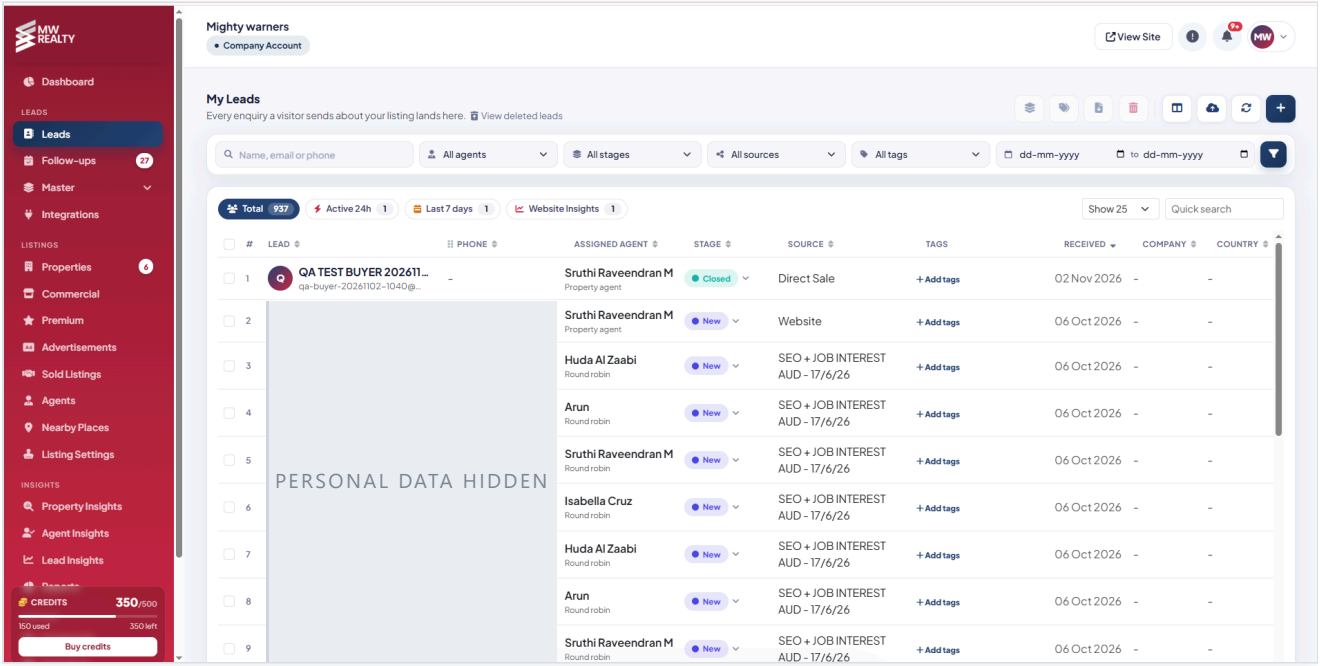

Figure 10. Agency leads. All agency leads with the assigned agent. New leads are shared among the agents automatically by round robin.

SUPER ADMIN Global view & compliance

The Super Admin opens the CRM from the administration console and sees every account. The Approvals menu holds Listing Permits and Listing Review.

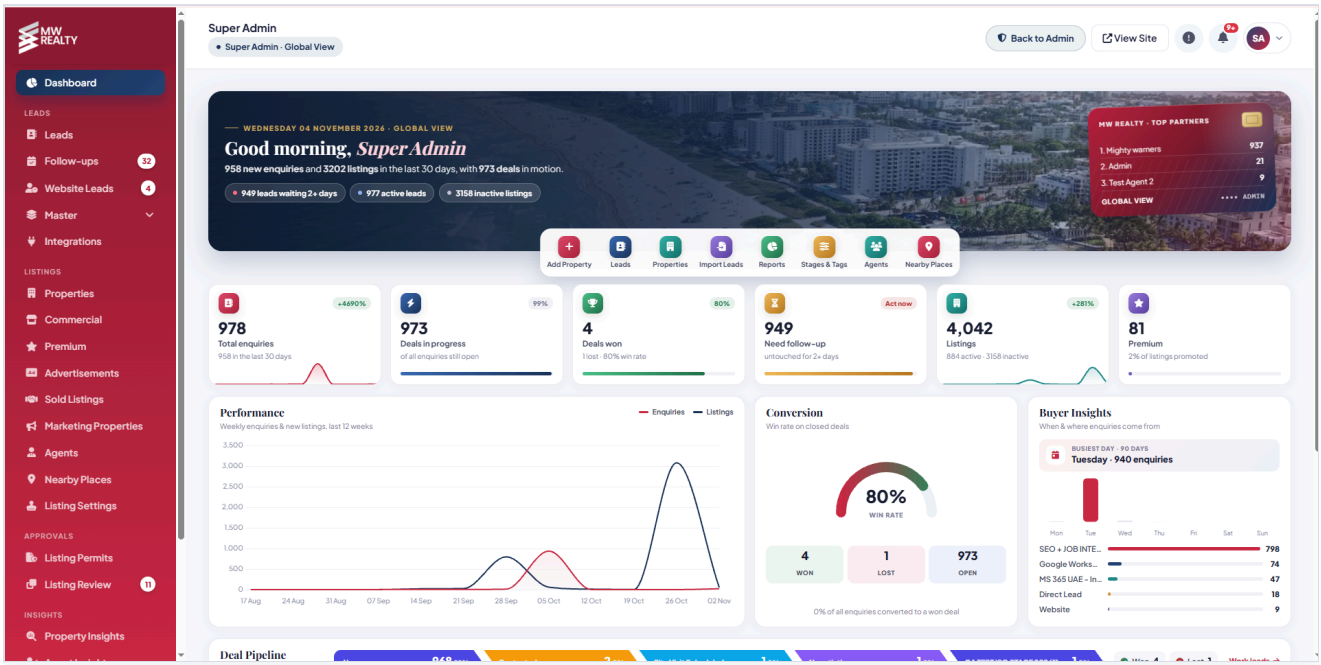

Figure 11. Super Admin dashboard. Enquiries, deals and listings across all agencies and agents, with the top partners. Extra menus: Website Leads, Marketing Properties, Listing Permits and Listing Review.

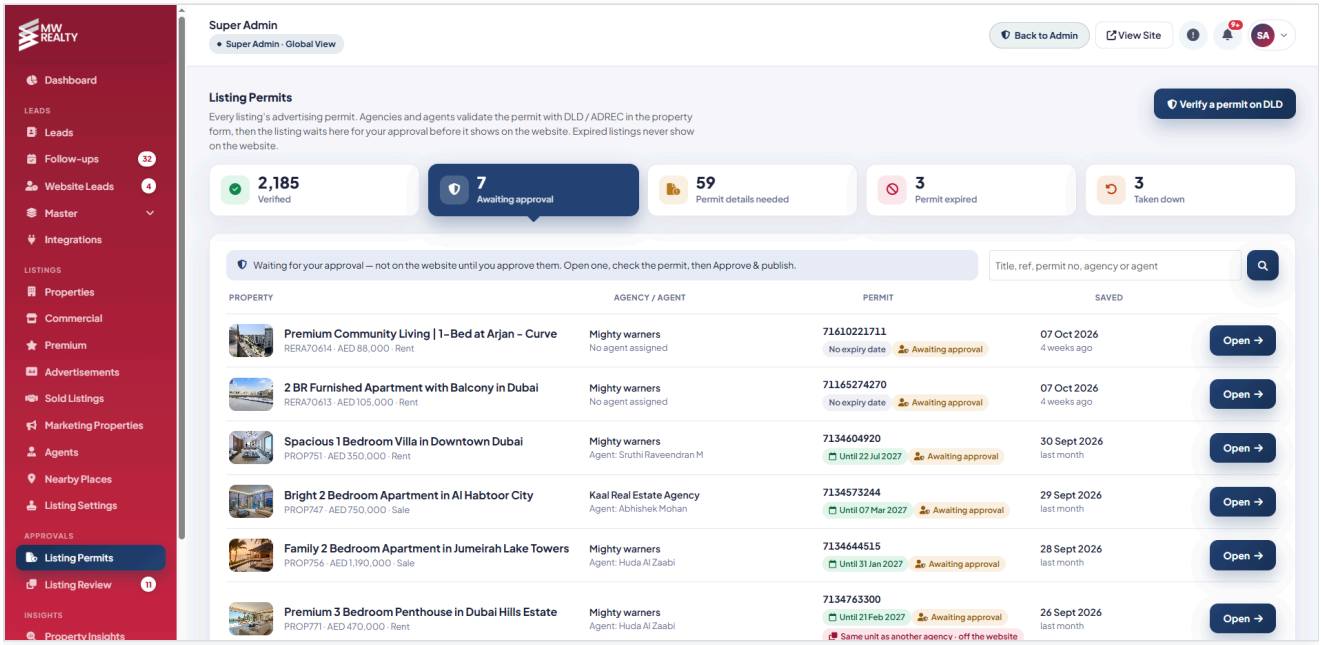

Figure 12. Listing Permits. Every listing's advertising permit, grouped as Verified, Awaiting approval, Permit details needed, Permit expired and Taken down. Each row shows the permit number, expiry date, agency and agent. The Super Admin can check a permit on DLD, then opens the listing to approve and publish it. A listing for the same unit as another agency's is flagged and kept off the website.

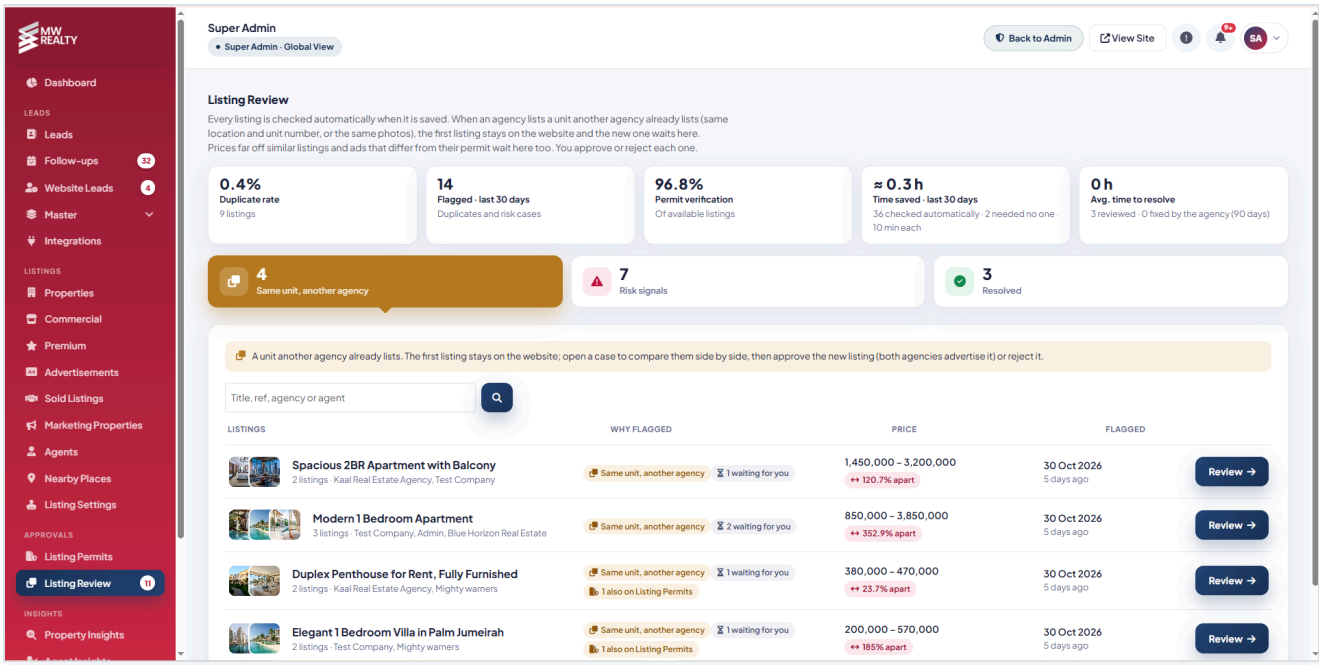

Figure 13. Listing Review. Each listing is checked automatically when saved. A listing is held for review when its unit or photos match another agency's listing, when its price is far from similar listings, or when the ad differs from its permit. Summary figures show the duplicate rate, cases flagged, the share of listings with a verified permit, and the time taken to resolve cases. The Super Admin approves or rejects each case after comparing the listings side by side.

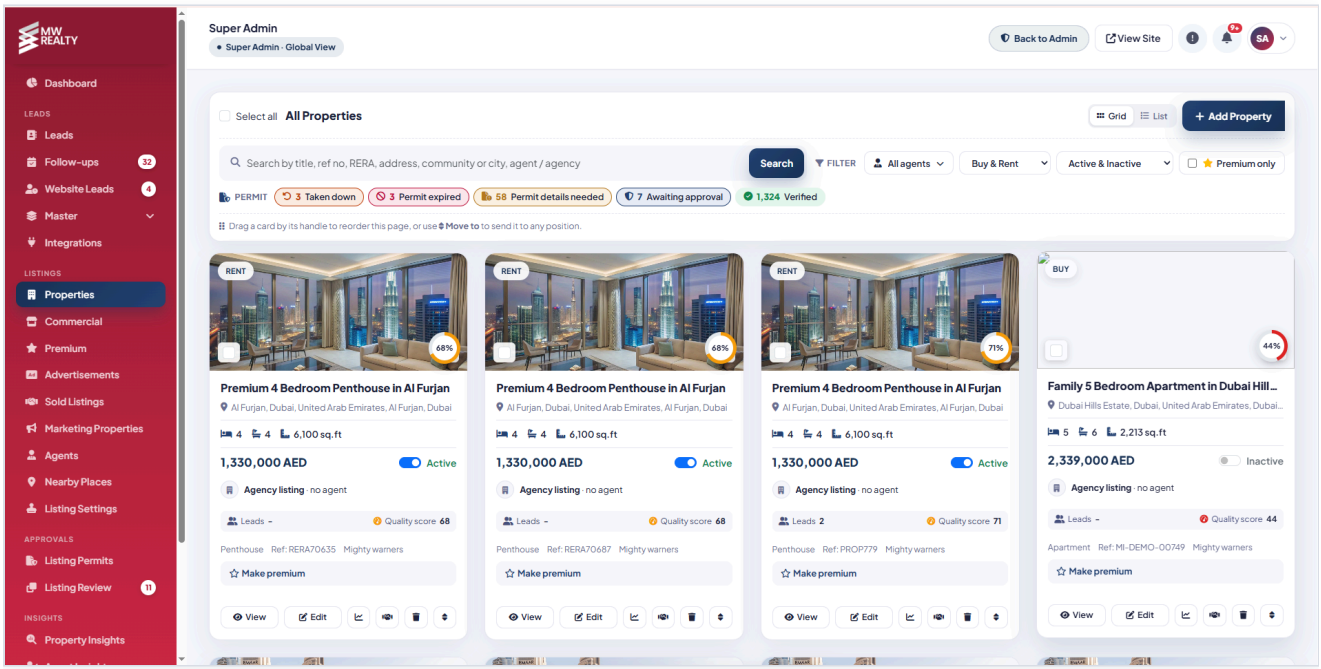

Figure 14. All properties. Every listing on the platform with its agency, plus permit status counts across all partners.
