MW REALTY CRM · TESTER HANDBOOK · MODULE 04

Website Leads

Visitors who identify themselves on the public website, their tracked activity, the Lead Pool, automatic routing and manual transfer

Where: CRM sidebar › Leads › Website Leads (`/crm/website-leads`), lead profile at `/crm/website-leads/<id>` . **Who:** Super Admin only (open the CRM from Admin). Agency and Agent accounts never see this menu item. **Locks:** no KYC or plan lock (Super Admin is never locked). The menu item shows a badge with the number of Lead Pool leads created in the last 7 days.

1. What this module does

When a visitor on the public website tells us who they are (AI chat details, a contact or enquiry form, or a customer account), the system creates a **website lead** for that person. From then on, everything they do on the website in that browser is tracked: pages and listings they open, time spent, searches, favourites, saved searches, AI chats and forms.

A website lead that does not belong to any agency or agent yet waits in the **Lead Pool**. It is handed to an agency or agent in two ways: **automatically** when the visitor shows repeated interest in one account's listings, or **manually** when Super Admin clicks **Transfer**. A handed-over lead becomes a normal CRM lead in that account, and its website activity stays visible on the CRM lead's Insights tab.

List screen (Website Leads)

Three tabs: **Lead Pool**, **Routed Leads**, **All Website Leads**, each with a count. Search box "Name, email or phone", source filter "All sources", tick boxes and a **Transfer** button. Columns: Lead, Phone, Came in via, Insights, Routed to, Last active. 20 rows per page, most recently active first.

Lead profile

Header with name, status chip **In pool** / **Routed**, "First seen", "via <source>", quick buttons Call, WhatsApp, Email, **Transfer**, and stats (Property views, Time on site, AI chats, Last active). Two tabs: **Profile** and **Insights**. Previous / Next arrows and a close (X) button.

Profile tab

Cards: Name, Contact, Lead Basic Details (Came in via, Customer account, First seen, Last active, Searches, Favorites / saved searches, Form enquiries, Time on listings), **Routed To** (with **Transfer lead** button) and **Most Interested In** (top 3 listings).

Insights tab

Stat cards (Time on site, Property views, Searches, Favorites, AI chats, Form enquiries), engagement badge (Hot / Warm / Cold lead), Most Interested Properties, Activity Timeline (Key events / All activity), AI Chat History, What They Search For, Saved by Lead (Favorites / Searches).

2. How it works (business rules)

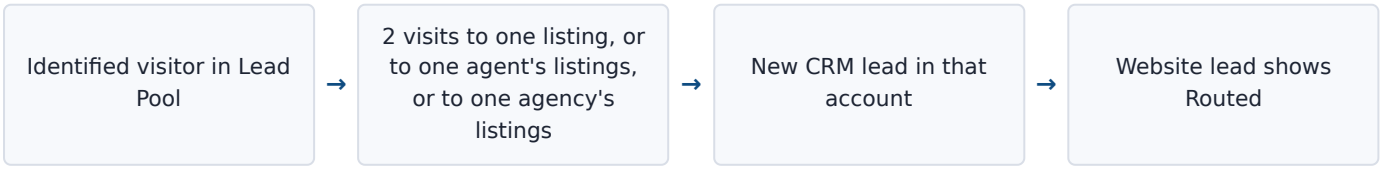

2.1 How a visitor becomes a website lead

A website lead needs an email, a phone or a customer account. The system first looks for an existing website lead with the same customer account, then the same email, then the same phone. If one exists, it is reused (empty fields are filled in, known fields are never overwritten). Otherwise a new one is created and its **Came in via** source is set from the first action:

Public website action	Came in via	Where it lands
AI chat: after the first free question the chat asks for name, email and phone; the visitor fills the details form	AI Chat	Lead Pool (until routed)
Contact page form, Home page form, calculator pages' form	Contact Form	Lead Pool
Landing page enquiry form	Landing Page	Lead Pool
Customer sign-up (after OTP), sign-in with password, OTP or Google; also any page view while signed in	Customer Account	Lead Pool
Property detail page: Contact agent / enquiry form, Book a viewing, brochure or floor plan download	Property Enquiry	A CRM lead is created for the listing's agency / agent at once, so the website lead is normally **Routed** right away
Property enquiry sent from inside the AI chat	AI Chat	As above: CRM lead for the listing's owner
"Find me a property" request on an agent's or agency's profile page	Property Enquiry	CRM lead for that agent / agency (Routed)
"Can't find what you're looking for?" custom request	Property Enquiry	An unassigned CRM lead (no agency) is created; the website lead stays in the **Lead Pool**

- **Anonymous history is kept:** pages viewed and an AI chat started before the visitor identified themselves are attached to the lead at the moment they identify (same browser). Anonymous activity that is never identified is deleted after 30 days by a nightly clean-up.
- **One browser, changing identity:** if a different email / phone is used in the same browser, tracking switches to that other person's lead. Going back to the first email / phone (or signing in as that customer) switches it back. Customer **sign-out** stops tracking the browser as that person.
- **What is tracked:** page views; listing detail pages (`/property-details/…`) as **property views** (only for listings that are live); listing pages with filters (`/properties` , `/commercial` , `/premium-properties` , `/marketing-properties`) as **searches**; contact button clicks on a listing; favourites added / removed and saved searches (signed-in customers); AI chats; forms. Time on a page counts only while the tab is visible (maximum 4 hours per page view). A page must stay open about 1 second to count. Known bots / crawlers are not tracked.

2.2 Automatic routing (Lead Pool → agency / agent)

- **Threshold:** 2 visits to the **same listing**, or 2 visits in total to listings of the **same agent**, or 2 visits in total to listings of the **same agency**. The check runs on every property view and also at the moment the visitor identifies (so earlier anonymous views count).
- **30-minute rule:** views of the same listing within 30 minutes of the previous view of that listing count as **one** visit (refresh, back / forward). Views of *different* listings each count straight away.
- **Needs contact details:** the lead must have an email or a phone. Listings with no agency / agent (MW Realty's own) never route.
- **Who gets it:** the listing's owning account; the listing's normal lead assignment picks the agent. The CRM lead message reads like: *Interested in "<listing title>" — visited this listing 2 times on the website* (or "this agent's listings" / "this agency's listings"), with "after chatting with the AI assistant" added for AI Chat leads, and a pointer to the Insights tab. The account receives its normal new-lead notification.
- **One person, one account:** once routed, the lead stays with that account. Later visits to other accounts' listings do not move or copy it. If the person's email / phone already matches a CRM lead in any agency / agent account (e.g. an earlier enquiry or a Facebook lead), the website lead is linked to that existing lead instead of creating a new one. The same rule applies to new property enquiries: a person who already belongs to account A who enquires on account B's listing is recorded in account A.

2.3 Manual transfer (Super Admin)

- Transfer one lead (profile page) or many (list page: tick rows, or tick the page then **Select all N matching leads**, up to 500 per transfer).
- Target list: only **approved and active** agencies and agents, agencies first, searchable, 20 at a time (more load on scroll). Each row shows "Agency", "Agent · <agency name>" or "Independent agent".
- Optional note (max 1000 characters).
- **It is a move, not a copy.** If the person has no CRM lead yet, a new one is created in the target account. If they already have a CRM lead in another account, that lead **moves** to the target with its history and notes, and any other copies in other accounts are merged into it (removed from those accounts; restorable from Deleted Leads).
- Choosing an agent who works inside an agency: the lead goes into the **agency** and is assigned to that agent. Choosing an independent agent: the lead goes to the agent.
- The target account is notified (bell and email). Timeline gets a "Transferred by Super Admin" event.
- Success toast: **"1 lead transferred to <name>."** or **"N leads transferred to <name>."**

2.4 Tabs and statuses

Tab / chip	Meaning
Lead Pool / **In pool**	No CRM lead in any agency / agent account yet. A lead whose only CRM lead is unassigned (no owner, e.g. custom request or enquiry on an MW Realty listing) is still In pool.
Routed Leads / **Routed**	Has at least one CRM lead owned by an agency or agent (automatic routing, property enquiry or transfer).
All Website Leads	Everyone, both states.

Engagement badge on the Insights tab: score = property views × 2 + AI chats × 3 + form enquiries × 5 + favorites × 3 + saved searches × 3 + whole minutes on site. 15 or more = **Hot lead**, 6–14 = **Warm lead**, below 6 = **Cold lead**.

3. Who can do what

Action	Super Admin	Agency	Agent
See "Website Leads" in the sidebar	**Yes**	**No**	**No**
Open list / profile / insights (also by typing the URL)	**Yes**	**No – error, no data**	**No – error, no data**
Transfer leads	**Yes**	**No**	**No**
Receive routed / transferred leads in CRM Leads	**—**	**Yes**	**Yes**
See the website activity of their own routed lead (CRM lead › Insights tab)	**Yes**	**Own leads**	**Own / assigned leads**

KYC state and plan do not affect this module (it is Super Admin only). They only matter for the receiving account's own Leads screen.

4. Fields and validation

Field	Required	Rules / limits
Search (list)	No	Max 100 characters. Matches name or email (partial). Phone matches only when the search has at least 4 digits (spaces / symbols ignored).
Came in via filter	No	All sources, AI Chat, Contact Form, Landing Page, Property Enquiry, Customer Account. Applies on change.
Transfer › Agency or agent	Yes	**Transfer** button stays disabled until one is picked from the list. Typing again clears the pick. Server message if the account is not valid: "Choose an active, approved agency or agent."
Transfer › Note	No	Max 1000 characters (field stops typing at 1000).
Selection	Yes	Toolbar **Transfer** disabled with no ticks (tooltip "Select leads first"). Max 500 leads per transfer.

5. Test scenarios

Priority: **High** core flow / data loss / access · **Medium** · **Low** cosmetic. Use a fresh private browser window per test visitor, and a unique test email / phone each time (for example `wl-test-01@example.com`).

	Scenario	Steps	Expected result
WL-01	**Super Admin opens Website Leads** High	1. Sign in to Admin, open the CRM. 2. Sidebar › Leads › **Website Leads**.	Page "Website Leads" opens on the **Lead Pool** tab. Three tabs with counts. Hint text under the title changes per tab. Badge in the sidebar = pool leads created in the last 7 days.
WL-02	**Agency / Agent cannot access** High	1. Sign in as an Agency, then as an Agent. 2. Check the sidebar. 3. Type `/crm/website-leads` and `/crm/website-leads/1`.	No Website Leads menu item. Direct URLs show an error message instead of data; no names, emails or counts are shown.
WL-03	**Contact form creates a pool lead** High	1. New private window. Open the public Contact page. 2. Submit with a new test name, email and phone. 3. As Super Admin, search that email in Lead Pool.	Website shows "Thanks — we've received your message and will be in touch soon." Lead appears in Lead Pool with Came in via **Contact Form**, Routed to **In pool**, Last active "just now". Timeline shows "Identified" and "Submitted a form".
WL-04	**Home page / landing page forms** Medium	1. Submit the Home page enquiry form with a new identity. 2. Submit a landing page form with another identity.	Home page lead: **Contact Form**. Landing page lead: **Landing Page**. Both in Lead Pool.
WL-05	**AI chat creates a lead after the free question** High	1. New private window. Open the AI chat, ask one question. 2. Try a second question. 3. Fill the details form (name, email, phone).	Second question asks for details ("Please share your details to keep chatting."). After the form: lead with Came in via **AI Chat**, AI chats = 1. The first (anonymous) question is visible in AI Chat History.
WL-06	**Customer sign-up / sign-in** High	1. Register a new customer account on the website and verify the OTP. 2. Browse a few pages.	Lead with Came in via **Customer Account**, a "Customer" badge in the list and "Customer account: Yes" on the profile. Page views appear in the timeline (All activity).
WL-07	**Favourites and saved searches** Medium	1. As the signed-in customer from WL-06, add 2 listings to favourites, remove 1, save a search. 2. Open the lead › Insights.	Timeline shows "Added to favorites", "Removed from favorites", "Saved a search". Saved by Lead › Favorites lists the 1 current favourite; Searches lists the saved search. Favorites stat = 1.
WL-08	**Searches are tracked** Medium	1. As an identified visitor, open `/properties` and apply filters (e.g. bedrooms 2). 2. Check Insights.	"Searched listings" in timeline with the filters. Searches stat increases. "What They Search For" shows e.g. "Bedrooms: 2" with a count. Opening `/properties` without filters is a plain page view, not a search.

	Scenario	Steps	Expected result
WL-09	**Anonymous history attaches on identify** High	1. New private window. Browse 3 pages and 1 listing without giving details. 2. Then submit the Contact form.	New lead's timeline (All activity) includes the page and property views made before the form. First seen = time of the first anonymous view.
WL-10	**Property enquiry goes straight to the listing owner** High	1. New identity. On a live listing owned by a test agency, send the Contact agent / enquiry form. 2. Check Website Leads and the agency's CRM Leads.	Website message "Thanks — your enquiry has been received and we'll be in touch soon." CRM lead exists in the agency's Leads. Website lead shows Came in via **Property Enquiry**, status **Routed**, Routed to = the agency. It is **not** in Lead Pool.
WL-11	**Viewing / brochure / floor plan forms** Medium	1. On an owned listing, Book a viewing with a new identity. 2. With another identity download the brochure (if the listing has one).	Each creates a CRM lead for the listing owner and a Routed website lead. Timeline "Submitted a form" titles: "Viewing request", "Brochure download".
WL-12	**Enquiry on an MW Realty (no owner) listing or custom request** Medium	1. Send a "Can't find what you're looking for?" request with a new identity. 2. Check Website Leads.	Lead stays in **Lead Pool** (In pool). Routed To card lists an entry "Unassigned Leads". Header chip still "In pool".
WL-13	**Auto-route: same listing twice** High	1. Create a pool lead (Contact form). 2. Same browser: open listing A (owned by test agency X). 3. Wait 30+ minutes, open listing A again.	After the second view the lead moves to Routed Leads, Routed to = agency X. Agency X has a new CRM lead whose message says "visited this listing 2 times on the website". Timeline shows "Routed to agency / agent".
WL-14	**Refresh within 30 minutes does not route** High	1. New pool lead. Open listing A. 2. Refresh / reopen it several times within 10 minutes.	Property views count goes up, but the lead stays **In pool** (all views count as one visit).
WL-15	**Auto-route: two listings of the same agent** High	1. New pool lead. Open listing A, then listing B, both assigned to the same agent (no wait needed).	Routed after the second listing. CRM lead message "visited this agent's listings 2 times". Lead goes to the listings' owning account.
WL-16	**Auto-route: two listings of the same agency, different agents** Medium	1. New pool lead. Open listings C and D of agency X with different agents.	Routed to agency X; message "visited this agency's listings 2 times". Agent chosen by agency X's normal lead assignment.
WL-17	**Views split across accounts do not route** Medium	1. New pool lead. Open 1 listing of agency X and 1 listing of agency Y.	Still In pool.

	Scenario	Steps	Expected result
WL-18	**Anonymous views route at identify time** Medium	1. New private window. Without identifying, open 2 listings of agency X. 2. Then submit the Contact form.	The lead is created and routed to agency X at once (appears in Routed Leads, not Pool).
WL-19	**Routed lead stays with its first account** High	1. Use the routed lead from WL-13 (agency X). 2. View 2 listings of agency Y.	No new CRM lead in agency Y. Routed to still shows only agency X.
WL-20	**MW Realty listings never route** Low	1. Pool lead views a listing without agency / agent twice (30+ min apart).	Lead stays In pool.
WL-21	**Transfer one lead from profile** High	1. Open a pool lead. Click **Transfer** (header) or **Transfer lead**. 2. Search an agency, pick it, add a note, click **Transfer**.	Toast "1 lead transferred to <agency>." Status chip becomes **Routed**; Routed To lists the agency. The agency gets a new CRM lead with message "Transferred from Super Admin's Website Leads by <admin>." plus the note, and a bell / email notification. Lead leaves the Pool tab; counts update.
WL-22	**Transfer dialog validation** Medium	1. Open Transfer; do not pick anyone. 2. Type a name that does not exist. 3. Pick a target, then edit the search text. 4. Paste more than 1000 characters into Note.	Transfer button disabled without a pick. "No matches." shown for unknown names. Editing the text clears the pick (button disabled again). Note stops at 1000 characters. Cancel closes without changes.
WL-23	**Transfer targets list** Medium	1. Open Transfer, click the search field, scroll down the list.	Agencies listed first, then agents. Meta line "Agency", "Agent · <agency>" or "Independent agent". More rows load on scroll. Pending (not approved) or inactive accounts are not listed.
WL-24	**Transfer to an agency agent** High	1. Transfer a pool lead to an agent shown as "Agent · <agency>". 2. Check that agency's Leads.	CRM lead belongs to the agency and is assigned to that agent. Website lead Routed to = the agency.
WL-25	**Bulk transfer of ticked rows** High	1. Tick 3 pool leads. Check "Selected Leads 3" badge. 2. Click toolbar **Transfer**, pick a target, Transfer.	Dialog title "Transfer 3 leads". Toast "3 leads transferred to <name>." Selection clears; list reloads; 3 fewer in Pool.
WL-26	**Select all matching** Medium	1. With more than 20 pool leads, tick the header checkbox. 2. Click "Select all N matching leads". Untick one row. 3. Click "Clear selection".	Banner "All 20 leads on this page are selected." then "All N matching leads are selected." (with "(up to 500 per transfer)" when N > 500). Unticking lowers the count by 1. Clear selection resets. Only test the actual transfer with a filter that matches test leads only.
WL-27	**Transfer an already-routed lead (move)** High	1. Take a lead routed to agency X (test data). 2. Transfer it to agency Y.	The CRM lead **moves** from X to Y (no longer in X's Leads; history kept). Agency Y is notified. Routed to = Y only. Timeline shows "Transferred by Super Admin" with "from X".

	Scenario	Steps	Expected result
WL-28	**Search by name, email, phone** Medium	1. Search part of a test name, then part of an email. 2. Search 3 digits of a phone, then 4+ digits.	Name / email partial matches work. 3 digits do not match by phone; 4+ digits do. "Clear" with a count badge appears; clicking it removes filters but keeps the tab.
WL-29	**Source filter and tabs** Medium	1. Select each source in "All sources". 2. Switch tabs while a filter is set.	Only leads with that Came in via are shown. Tab counts stay global (not filtered). URL keeps status / source / search; Back button restores the previous view.
WL-30	**Empty states** Low	1. Search a value that matches nothing. 2. Open a lead with no views.	"No website leads match these filters." Profile: "Not routed yet — they haven't viewed a listing that belongs to an agency or agent." and "No property detail pages viewed yet." Insights: "No AI chat conversations.", "No filtered searches yet.", "No favorite properties.", "No saved searches."
WL-31	**Pagination** Low	1. With more than 20 leads, go to page 2.	Next 20 rows; ticks from page 1 are cleared when the page changes.
WL-32	**Row click and Insights link** Low	1. Click a row (not the checkbox). 2. Back; click the Insights icons in a row.	Row opens the profile on the Profile tab. Insights icons open the profile directly on the **Insights** tab. Clicking the checkbox does not open the lead.
WL-33	**Profile navigation** Low	1. Use Previous / Next arrows. 2. Click X; click "Website leads" back link.	Arrows move through all website leads by last activity (not limited to the current tab); disabled at the ends. X returns to the list; back link opens the All Website Leads tab.
WL-34	**Time on site** Medium	1. Identified visitor keeps a listing open and visible for 2 minutes, then switches tab for 2 minutes, then closes.	Time for that view is about 2 minutes (hidden time not counted). Time on site / Time on listings increase accordingly.
WL-35	**Engagement badge** Medium	1. New lead from Contact form (enquiry = 5 points). Check badge. 2. Add 1 property view (2 points). Check again.	First: **Cold lead** (score below 6, unless minutes on site add more). After: **Warm lead**. 15+ points shows **Hot lead**.
WL-36	**Timeline filters and AI chat history** Medium	1. On Insights, switch **Key events** / **All activity**. 2. Open a conversation in AI Chat History.	Key events hides plain page views; All activity shows them; counter changes. Chat shows the messages in order. Long lists load more on scroll (20 at a time).
WL-37	**Same email reuses the lead** High	1. Submit the Contact form with email E. 2. In a different browser, start the AI chat and give the same email E.	No second website lead. The same lead now has the AI chat. Came in via stays **Contact Form** (first source is kept).
WL-38	**Identity switch and sign-out** Medium	1. In one browser submit a form as person P1, then as P2, then browse. 2. Sign in as customer C, sign out, browse again.	After P2's form the browsing goes to P2's lead, not P1's. After sign-out, new browsing is not added to C's lead.

	Scenario	Steps	Expected result
WL-39	**Existing CRM contact wins (one person, one account)** Medium	1. Agency X already has a CRM lead with email E (test data). 2. Visitor with email E submits the Contact form, then enquires on agency Y's listing.	After the Contact form alone the website lead may still show In pool. After the enquiry, the enquiry is recorded on agency X's lead (not a new lead in agency Y) and the website lead shows Routed to agency X.
WL-40	**Routed lead in the agency's CRM** Medium	1. Sign in as the agency that received a routed lead. 2. Open the lead in Leads and its Insights tab.	The agency sees the same website activity (views, chats, searches) as Super Admin saw.
WL-41	**Mobile width** Low	1. Open the list and a profile at about 375 px width.	Table scrolls sideways inside its box; tabs, filter bar, Transfer dialog and profile cards are usable; no page-wide horizontal scroll.

6. Expected results checklist

- [ ] Only Super Admin can see and open Website Leads; partners get no data.
- [ ] Contact / Home / landing page forms, AI chat details and customer accounts create a lead with the correct "Came in via".
- [ ] Property enquiries create a CRM lead for the listing's owner immediately; the website lead shows Routed.
- [ ] Anonymous activity before identifying is attached to the lead.
- [ ] Routing happens after 2 visits to one listing / one agent / one agency; refreshes within 30 minutes count once.
- [ ] A routed person stays with the first account; no duplicates across accounts.
- [ ] Transfer creates or moves the CRM lead, notifies the account, and shows the correct toast.
- [ ] Tab counts, badge, search (incl. 4-digit phone rule), source filter and pagination are correct.
- [ ] Insights numbers match what the tester did (views, time, searches, favourites, chats, forms).

7. Known behaviour (not bugs)

By design:

- Tab counts do not change when you search or filter; they always show the totals.
- "Came in via" is the **first** way the person identified; it does not change later.
- A lead with only an "Unassigned Leads" entry in Routed To is still **In pool** .
- A property enquiry from someone who already belongs to another account goes to that other account, not to the listing's owner.
- Routing requires an email or phone, a live listing, and a listing that belongs to an agency / agent.
- Previous / Next on the profile walk through all website leads, not only the current tab.
- Favourites and saved-search lists only exist for customer accounts; for others only counts from tracked events show.
- Bots and automated browsers (e.g. headless test tools, Lighthouse) are not tracked. Manual testing in a normal browser is needed.
- Anonymous (never identified) activity is deleted after 30 days.

> **Test-data cautions:** use only test emails / phones and test agencies / agents. Transfer is a **move**: transferring a real person's lead removes it from another account. Do not use "Select all matching" without a filter that matches only your test leads. Transfers and routing send real notifications and emails to the receiving account. Do not use real visitor records.

8. Reporting a bug

Include: scenario ID, role, test identity (email / phone), website lead ID, listing IDs and their agency / agent, exact times of each listing view (to prove the 30-minute gap), tab and filters used, expected vs actual, screenshot. Note whether you used a private window and whether you were signed in as a customer.
