MW REALTY CRM · TESTER HANDBOOK · MODULE 05

Master Data

Lead stages, tags and sources (shared and account-owned), linked leads, and Property Options for Super Admin

Where: CRM sidebar › Leads › Master › **Stage** (`/crm/master/stages`), **Tag** (`/crm/master/tags`), **Source** (`/crm/master/sources`), **Property Options** (`/crm/master/property-options`). **Who:** Super Admin, Agency and Agent; Property Options is Super Admin only. **Locks:** locked until KYC approval (“Unlocks after KYC approval”). No plan lock.

1. What this module does

Master holds the lists used to classify leads. **Stage** = where the lead is in the sales pipeline. **Tag** = extra labels (a lead can have many). **Source** = where the lead came from. Super Admin also manages **Property Options**: the dropdown choices on the property listing form and in the website search.

Stage

Name, colour, “Closed?” flag, one Default. Drag to reorder. Used in the Leads Stage column, filters, bulk Assign Stage and reports.

Tag

Name and colour. Alphabetical, 50 per page, with search. Used in tag pickers, filters and bulk Assign Tag.

Source

Name only. Drag to reorder. Chosen when a lead is added by hand; set automatically for website, import and Facebook leads.

Each list page shows a table: (drag handle), **Name** (with **MW Realty** badge for shared items), **Closed?** and **Default** (stages only), **Leads** (count) and **Actions** (**Edit**, **Delete**, or “View only”). Button **Add Stage** / **Add Tag** / **Add Source** opens a small form.

2. How it works (business rules)

2.1 Shared (MW Realty) items and own items

Super Admin adds an item	→	Shared item, badge “MW Realty”	→	Every agency and agent can use it, but not edit / delete it
Agency or agent adds an item	→	Own item of that one account	→	Only that account sees, uses, edits and deletes it

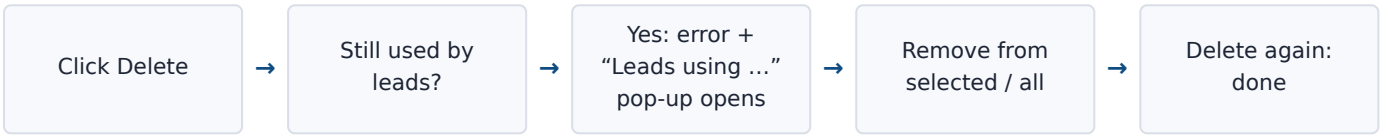

- Super Admin's Master pages list **only the shared items**. Partners see the shared items plus their own, mixed in one list.
- An agency's own items are **not** shared with its agents, and an agent's own items are not shared with the agency. Each account has its own list.
- Shared rows show a lock instead of the drag handle and “View only” in Actions for partners. The page note says: “MW Realty stages are set for every account — you can use them but not change them.” Super Admin's note says the items are “shared with every agency and agent”.
- **Shared defaults** installed with the system (Super Admin may have changed them): Stages New (default), Hot Buyer, Active Buyer, Active Seller, Closed (closed), Negotiation, Dropped (closed), Connected. Tags Buyer Lead, Seller Lead, Hot Lead, Follow Up, VIP. Sources Website, Referral, Walk-in, Social Media, Property Portal.

- **System sources** (Website, AI Chatbot, Brochure Download, Floor Plan Download, Custom Request, Agent Profile, Agency Profile, Direct Sale, Direct Lead, Import, Landing Page) are shared items added automatically when a lead arrives through that channel. Any other channel creates a source in the lead's own account — for example each Facebook ad set name, or “Book Viewing”.

2.2 Names must be unique

- Partners cannot add an item with the same name as one they already see (their own or a shared one). Stage: “A stage with this name already exists.” (upper/lower case ignored). Tag / Source: “The name has already been taken.”
- Two different accounts may each have their own item with the same name.
- **Merge rule:** when Super Admin adds (or renames to) a shared item whose name equals an account's own item, that account's own copy is merged into the shared one: its leads move to the shared item and the own copy disappears from the account's list. This is quiet (not written to the lead timeline).

2.3 Lead counts, linked leads and deleting

- **Leads** column = how many leads **you can see** use the item (deleted leads are not counted). For a shared item, a partner sees only its own leads; Super Admin sees all accounts.
- For editable items with a count above 0 the number is a link. It opens **Leads using “Name”**: search by name, email or phone, 20 rows per scroll, owner shown for Super Admin, buttons **Remove from selected (N)** and **Remove from all N** (browser confirm “Remove “Name” from N leads?”). Result: “Removed from N leads.”
- Removing a stage leaves the lead with **No stage**; removing a source leaves **No source**; both are written to each lead's timeline (“Stage changed from X to No stage”). Removing a tag just takes the tag off.
- Delete is refused while leads use the item: “This stage is still used by leads. Remove it from them first.” (same for tag / source). The default stage cannot be deleted (no Delete button; “The default stage can't be deleted.”).
- Leads in Deleted Leads do not block deletion. If such a lead is restored later, it has no stage / source / tag for the deleted item.

2.4 Order, default and closed stages

- Stages and Sources keep a drag order; the new order is saved when you drop (“Drag your own rows to reorder.”). Only own rows move; shared rows stay where they are. If saving fails: “The new order could not be saved.” Tags are always alphabetical.
- The same order is used in every Leads picker and filter (All stages, All sources, Assign Stage, the Stage column pill). Tags appear alphabetically there too.
- **Default stage:** new leads start in the owner's own default stage if it has one, else in the shared default. **Set default** appears on own stages only: “Default stage updated.”
- **Closed?** (“Counts as closed (the lead is finished — won or lost)”): moving a lead into a closed stage stamps its Closed On date. A closed stage whose name contains lost, drop(ped), cancel(led), reject(ed), dead or junk counts as **lost** in reports; other closed stages count as **won**. Changing the flag later does not re-stamp leads already in that stage.

2.5 Other places that create items

- Leads › Add Lead › **+ Stage**; Leads › Assign Stage / Assign Tag › **Add New Stage / Add New Tag** — these create own items (Super Admin: shared, or for the chosen Owner when adding a lead for an account).

- Leads › Import: missing tags are created as own tags; Facebook CSV creates own sources from ad set names. Unknown stages and sources in a Direct import are rejected.

2.6 Property Options (Super Admin only)

- Left menu groups: **Listing form dropdowns** (Property Type, Listing Type, Completion Status, Category, Location (communities), Furnishing, Emirate, Rental Period), **Website search** (Bedrooms, Bathrooms), **Features (with icons)** (Amenities, Easy Access, Attributes), **Nearby places** (Nearby Place Type). Each shows its option count.
- Table: Icon (feature lists), **Name** (every active language), **Code**, **Listings** or **Places** (usage), **Shown** switch, Edit / Delete. Search box appears when a list has more than 8 options.
- **Shown** off = hidden from new listings; listings that already use it keep it. Drag rows to set the form order.
- Code is saved on listings. It is made from the name when empty (e.g. “Sea View” → `sea_view`). Bedrooms / Bathrooms keep the value as typed: a number, “N+” or “studio”. Once used, the code is locked (“Used by listings, so the code can't change. You can still rename it.”).
- An option in use cannot be deleted (Delete greyed, tooltip “Used by N listings — switch it off instead”).
- Changes affect every agent's property form and the public website search / filters.

3. Who can do what

Action	Super Admin	Agency	Agent
Open Stage / Tag / Source (approved)	**Yes**	**Yes**	**Yes**
Open while KYC pending / rejected	–	**No (locked)**	**No (locked)**
Use shared items on leads and filters	**Yes**	**Yes**	**Yes**
Add, edit, delete, reorder shared items	**Yes**	**No**	**No**
Add, edit, delete, reorder own items	–	**Yes**	**Yes**
Set default stage	**Shared**	**Own only**	**Own only**
Linked leads pop-up / remove from leads	**All accounts**	**Own items, own leads**	**Own items, visible leads**
Property Options	**Yes**	**No**	**No**

- KYC pending: Master has a padlock; direct URLs show “Your account is pending Super Admin approval.”
- Property Options is not in a partner's menu. A partner opening `/crm/master/property-options` sees “Only Super Admin can manage property options.”

4. Fields and validation

Form	Field	Required	Rules / limits
Stage	Name	Yes	Max 100. Unique among own + shared (case ignored).
Stage	Color / Closed?	Color yes	8 preset colours or a custom one. Default colour if none. Closed? switch.
Tag	Name / Color	Yes / Yes	Name max 100, unique among own + shared.
Source	Name	Yes	Max 100, unique among own + shared. No colour.

Form	Field	Required	Rules / limits
Property option	Name — <language>	Default language	Max 255 each. Empty default: “Enter the name (EN).”
Property option	Code	Auto	Max 100, unique in the list: “That option already exists.” Bedrooms / Bathrooms: “Use a number (e.g. 6), "N+" for N or more (e.g. 6+), or "studio".”
Property option	Icon (feature lists)	No	SVG, PNG, JPG or WEBP, max 1 MB.

5. Test scenarios

Priority: **High** core flow / data loss / access · **Medium** · **Low** cosmetic. Prefix every test item name with “QA ” so it is easy to find and remove.

	Scenario	Steps	Expected result
MD-01	**KYC lock** High	1. Sign in as a KYC-pending agency; look at Master; open `/crm/master/stages`.	Padlock “Unlocks after KYC approval”; direct URL gives “Your account is pending Super Admin approval.” and no data.
MD-02	**Partner sees shared + own** High	1. As an approved agency open Stage, Tag and Source.	Shared rows have the **MW Realty** badge, a lock icon and “View only”; no Edit/Delete/Set default on them. Info note explains the rule.
MD-03	**Add own stage** High	1. **Add Stage** › Name “QA Viewing”, pick a colour, Closed off › **Add Stage**.	Green note “Stage added.” Row at the end of the list, editable, Leads 0. Appears in Leads › All stages filter, Stage pill and Assign Stage.
MD-04	**Duplicate names** High	1. Add stage “new” (shared “New” exists); add stage “QA viewing” again. 2. Add a tag “VIP”; add a source “Website”.	“A stage with this name already exists.” for both stages; “The name has already been taken.” for tag and source. Nothing created.
MD-05	**Same name in another account** Medium	1. Agency A adds tag “QA Investor”; Agency B adds tag “QA Investor”.	Both succeed. A does not see B's tag and vice versa.
MD-06	**Agency vs its agent** Medium	1. Agency A adds source “QA Agency Src”. Agent X (member of A) adds source “QA Agent Src”. 2. Check both Source pages and the Leads source filter for each.	Each account sees only its own item plus the shared ones.
MD-07	**Edit own item** Medium	1. Edit “QA Viewing”: rename, change colour, switch Closed on › **Save**. 2. Open a lead in that stage.	“Stage updated.” New name / colour show on leads at once. Closed? = Yes. Renaming to an existing name is refused.
MD-08	**Empty / long name** Low	1. Try to save with an empty name; then paste 120 characters.	Empty is blocked by the form. Input stops at 100 characters.
MD-09	**Delete unused item** High	1. Delete an own stage / tag / source with Leads 0 › confirm “Delete the stage “QA …”?”.	“Stage deleted.” / “Tag deleted.” / “Source deleted.” Row gone; gone from Leads filters and pickers.

	Scenario	Steps	Expected result
MD-10	**Delete item in use** High	1. Put 3 test leads in stage “QA Viewing”. 2. Click **Delete** on it.	Red note “This stage is still used by leads. Remove it from them first.” and the **Leads using “QA Viewing”** pop-up opens with the 3 leads.
MD-11	**Remove from selected / all** High	1. In the pop-up tick 1 lead › **Remove from selected (1)** › confirm. 2. **Remove from all 2** › confirm. Close; delete the stage. 3. Open one of the leads.	“Removed from 1 lead.”, then “Removed from 2 leads.”; count in the table updates. Delete now succeeds. Lead shows **No stage**; Timeline: “Stage changed from QA Viewing to No stage”.
MD-12	**Linked leads search and paging** Low	1. Open the count link of an item used by more than 20 leads; scroll; search by a phone number.	More rows load on scroll (20 at a time); search narrows the list. Super Admin also sees each lead's owner. Empty: “No leads use it.”
MD-13	**Source removal** Medium	1. Remove an own source from a lead via the pop-up; open the lead.	Source card shows “No source”; Timeline: “Source changed from … to No source”. Source stays read-only on the lead.
MD-14	**Tag removal** Medium	1. Tag used by 2 leads › count link › Remove from all › delete tag.	Tag disappears from both leads; tag deleted. (Tag removals here are not logged on the lead.)
MD-15	**Deleted leads do not block** Medium	1. Put one test lead in “QA Tmp” stage; delete the lead (Deleted Leads). 2. Delete the stage; restore the lead.	Leads count is 0 and delete succeeds. The restored lead has no stage.
MD-16	**Default stage** High	1. As an agency, **Set default** on an own stage. 2. Add Lead without a stage; also send a website enquiry to this agency. 3. Try to delete the default stage.	“Default stage updated.” New leads start in that stage. The default row has no Delete button. The shared “New” may still show a Default badge (see section 7).
MD-17	**Closed stage effect** Medium	1. Move a lead into a closed stage (e.g. Closed), then to an open stage.	Lead Summary shows a Closed date and Table Fields › Closed On is filled; after moving back it is empty.
MD-18	**Reorder own rows** Medium	1. Drag an own stage above another; reload. Try dragging a shared row. 2. Open Leads › All stages and a Stage pill.	Order is kept after reload and used in Leads pickers. Shared rows cannot be dragged. Same for Sources. Tags have no drag (alphabetical).
MD-19	**Tag search and paging** Low	1. With more than 50 tags, use the page arrows; type in “Search tags”.	50 per page, “1 / N” indicator; search filters by name. No match: “No tags match your search.”
MD-20	**Super Admin shared item** High	1. As Super Admin add stage “QA Global”. 2. As two different agencies, open Stage and a lead's stage picker.	Both agencies see “QA Global” with the MW Realty badge, View only, and can set it on their leads. Super Admin's Leads count includes all accounts.
MD-21	**Merge rule** High	1. Agency A adds own tag “QA Merge” and puts it on 2 leads. 2. Super Admin adds a shared tag “QA Merge”. 3. As Agency A open Tag and the 2 leads.	Agency A now has only the shared “QA Merge” (MW Realty badge); its 2 leads still carry the tag (now the shared one). Same applies to stages and sources.

	Scenario	Steps	Expected result
MD-22	**Partner cannot change shared items** High	1. As an agency try to edit, delete, reorder, set default or remove-from-leads on a shared item (UI and, if allowed, a direct request).	No controls in the UI; any direct attempt fails (not found). Shared item unchanged for everyone.
MD-23	**Effect on Leads filters** High	1. Filter Leads by an own stage, a shared source and a tag; then delete an unused own item and reopen the filter. 2. Super Admin: filter All Leads by a shared stage.	Filters return matching leads only. The deleted item is gone from the dropdowns. Super Admin's filter returns every account's leads in a stage of that name.
MD-24	**Quick add from Leads** Medium	1. Leads › tick a lead › Assign Tag › **Add New Tag** › name + colour › Add › Apply.	Tag is created as an own tag (visible in Master › Tag) and applied to the lead.
MD-25	**Automatic sources** Medium	1. Import a Facebook CSV with ad set “QA Set 1”. Send a Book a viewing request. 2. Open Master › Source.	“QA Set 1” and “Book Viewing” appear as own (editable) sources of the receiving account. Website, Brochure Download etc. stay shared.
MD-26	**Property Options access** High	1. As an agency open `/crm/master/property-options`. As Super Admin open Master.	Agency: “Only Super Admin can manage property options.” with Try again; no menu item. Super Admin: menu item present, page loads with grouped lists and counts.
MD-27	**Add property option** High	1. Property Type › **Add option** › Name (EN) “QA Duplex”, other languages optional, Code empty › Save. 2. Open the property form and the website search.	“Option added.” Code `qa_duplex`, Listings 0, Shown on. It appears at the end of the Property Type dropdown and website search.
MD-28	**Option validation** Medium	1. Save with empty default-language name; add “QA Duplex” again; in Bedrooms add “two”.	“Enter the name (EN).”; “That option already exists.”; “Use a number (e.g. 6), "N+" for N or more (e.g. 6+), or "studio".”
MD-29	**Edit, hide and delete option** High	1. Edit an unused option's name and code › Save. Edit a used option. 2. Switch **Shown** off on a used option; open the property form and an existing listing that uses it. 3. Delete an unused option; hover Delete on a used one.	“Option updated.” Used option: Code field read-only with the lock note. Hidden option is not offered for new listings; the existing listing keeps it. Delete asks “Delete this option?” and removes it; used option's Delete is disabled with “Used by N listings — switch it off instead”.
MD-30	**Icons and order** Low	1. Amenities › add an option with a PNG icon under 1 MB; try a 2 MB file. 2. Drag rows to a new order; reload.	Icon shows in the table and on the property page. Oversized file is refused. Order is kept and used on the property form.
MD-31	**Mobile width** Low	1. Open Stage and Property Options at phone width.	Tables scroll sideways; Add / Edit forms usable; no overlapping text.

6. Expected results checklist

- [ ] Shared items are visible and usable by every partner but only Super Admin can change them.
- [ ] Own items stay inside their account (agency and its agents have separate lists).
- [ ] Duplicate names are refused within what an account can see; other accounts may reuse a name.

- [ ] An item used by leads cannot be deleted until removed from them; the default stage cannot be deleted.
- [ ] Remove-from-leads changes only the chosen leads and logs stage / source changes on the lead.
- [ ] Drag order is saved and used in all Leads pickers and filters.
- [ ] Closed stages stamp and clear the Closed On date correctly.
- [ ] Property Options changes show on the property form and website search; used options cannot be deleted or re-coded.

7. Known behaviour (not bugs)

By design:

- A partner with its own default stage still sees the shared “New” marked Default (two Default badges). New leads use the partner's own one.
- Shared items show no clickable lead count for partners (they cannot remove a shared item from leads).
- The Leads count ignores deleted leads, so delete may succeed even if a deleted lead used the item.
- Super Admin adding a shared item with an existing account item name silently merges that account's copy.
- New system / Facebook sources appear in Master by themselves when leads arrive.
- The Source on a lead is read-only, but removing a source in Master leaves the lead with “No source”.

Test data: prefix test items with “QA ” and use test leads only. As Super Admin, never edit, merge, remove-from-all or delete a real shared stage / tag / source, or a real Property Option — it changes every account and the public website at once. Clean up QA items after testing.

8. Reporting a bug

Include: role and account, KYC state, list (Stage / Tag / Source / Property Options › list name), item name and whether it is shared or own, lead IDs involved, exact steps, expected vs actual (exact message), time and a screenshot.
