MW REALTY CRM · TESTER HANDBOOK · MODULE 09

Listing Permits

Super Admin’s view of every listing’s advertising permit: approve listings that wait for MW Realty, and take listings off the website

Where: CRM sidebar › Listings › Listing Permits (`/crm/listing-permits` and `/crm/listing-permits/:id`). **Who:** Super Admin only (open the CRM from Admin). Agencies and agents never see this menu; the pages refuse them. **Locks:** none for Super Admin.

1. What this module does

Dubai and Abu Dhabi rules require an advertising permit on every property ad. Agencies and agents enter the permit in the listing form (Core details) and click **Validate** to check it with DLD (RERA permits) or ADREC. Listing Permits lets Super Admin see the permit status of every listing (Properties and Commercial), check a permit against the ad, **Approve & publish** listings that wait for MW Realty, and **Take down** any listing.

List (`/crm/listing-permits`)

Intro text, button **Verify a permit on DLD** (opens the DLD website), five status cards with counts that work as tabs, a search box, rows with Property, Agency / Agent, Permit, Saved / Verified date and **Open**. 20 per page.

Review page (`/crm/listing-permits/:id`)

Header with status chip and **Full listing**; permit card (emirate, type, license, QR, number, expiry, verification link); “Does the ad match the permit?”; Review history; Checklist; action cards **Approve & publish** and **Take down**.

2. How it works (business rules)

Owner saves listing → Status worked out → Validate or Super Admin approval → Verified = may be live → Expiry / Take down = offline

2.1 Status cards (tabs)

Card label	Meaning	Who acts
Verified	Permit verified online, checked by MW Realty, or no permit needed. Can be live (if the owner has it Active).	Super Admin may take it down.
Awaiting approval / Not verified / approval	Complete permit details but not live yet: waiting for Super Admin approval, or (RERA / ADREC) not validated yet. Label is “Awaiting approval” when every listing needs approval, otherwise “Not verified / approval”.	Super Admin approves; or owner validates.
Permit details needed	Emirate, permit number, expiry date or QR code missing.	Owner completes the form.
Permit expired	Taken offline automatically after the permit expired.	Owner enters and validates the renewed permit.
Taken down	Super Admin took it down.	Owner changes the permit details and saves.

Sold and rented listings are not shown in the list or counts. The list opens on the pending card when every listing needs approval, otherwise on **Verified**. Rows are newest first (last submitted / saved).

2.2 Approval policy

- **Mode A – approval not required (default):** a RERA or ADREC listing whose permit the owner validated online becomes Verified and can go live by itself. DTCM and “None (DIFC/JAFZA only)” listings cannot be validated online, so they always wait for Super Admin. A RERA / ADREC listing that was not validated online (e.g. the DLD / ADREC service is not connected on the server) also sits in the pending card and Super Admin can approve it after checking by hand.
- **Mode B – approval required:** every listing waits for Super Admin approval, even after a successful Validate. Changing price or permit details of an approved listing sends it back to Awaiting approval.
- Northern Emirates outside Al Ain needs no permit: Verified on save in mode A.
- Listings Super Admin creates (MW Realty listings) that need approval are approved automatically on save once the permit details are complete (history note “Approved on save (MW Realty listing).”).
- Ask the project lead which mode your test server uses. The intro text on the list shows it: mode B says “… the listing waits here for your approval before it shows on the website.”; mode A says “…a verified listing goes live by itself. DTCM and None (DIFC / JAFZA) listings can't be validated online, so they wait for your approval.”

2.3 Approve & publish

- Shown only when the listing is in the pending card, is not sold, and nothing is missing. The card text explains what to check (verified online / not verified / can’t be validated online / no permit issued), ending “Approving publishes the listing on the website.”
- Confirm pop-up “Approve this listing?” – “It goes live on the website now. The agency / agent is told by email and in the portal.” Button **Approve & publish**.
- Result: status Verified, listing switched Active and on the website; a permit that was not verified online is recorded as “Checked by MW Realty”. Toast “Listing approved — it is live on the website.” and the list returns to the pending card. Owner and assigned agent get “Listing approved” (bell + email).
- Refused (server): sold – “This listing is marked sold — nothing to approve.”; wrong status – “Only listings waiting for approval can be approved.”; incomplete – “Cannot approve yet. Missing: … .”

2.4 Take down

- Available on every listing that is not sold and not already Taken down.
- Confirm pop-up “Take this listing down?” – “It goes off the website now and stays offline until the agency / agent changes the permit details and validates it again.” Button **Take down**.
- Result: status Taken down, listing switched off. Toast “Listing taken down — it stays off the website until its permit details are changed.” Owner and assigned agent get “Listing taken down” (bell + email); their Properties menu badge counts it; the edit form shows a red banner and all fields become editable again.
- The listing leaves Taken down only when the owner changes a permit-related field (emirate, permit type / city / number / expiry / QR / link, price, offering type, property type, bedrooms, size) and saves. Saving without such a change keeps it Taken down.

2.5 Automatic jobs and notifications

- **Daily, shortly after midnight (UAE time):** Verified listings whose permit expiry date has passed become “Permit expired”, are switched off, and the owner + assigned agent are notified (“DLD permit expired”).
- **7 days before expiry:** one reminder “DLD permit expiring soon” per permit.
- When a listing goes to Awaiting approval (saved by an agency / agent), every Super Admin gets a bell notification and the site’s notification email address gets an email; the owner gets “Listing sent for approval”.

- Every status change is written to **Review history** with who did it (agency, agent, admin or system) and a note.

2.6 Review page details

- **Permit card:** “DLD Advertising Permit” / “ADREC …” / “DTCM …”; Emirate, Permit type (and city), license number; QR image (“No QR uploaded” if none); Permit number; Expires (red if expired, otherwise “in N days”); Verification link or “Not provided — use the QR or the … website.”; for RERA a button **Check permit number on DLD**. Banner: “Verified with DLD on …”, “Checked by MW Realty on … (approved without online validation)”, or “Not verified…”. No-permit listings show “DIFC / JAFZA free-zone listing — no advertising permit is issued.” or “No advertising permit is needed for this location.”
- **Does the ad match the permit?** If verified online: a table “<issuer> permit / This ad” for Category, Purpose, Type, Location, Bedrooms, Size (sq.ft), Price; rows that differ are highlighted with a warning icon. Otherwise a list of the ad’s facts (Purpose, Type, Price, Bedrooms, Size, Location, Agency ORN, Agent BRN) to compare by hand.
- **Checklist:** “<issuer> permit number”, “Permit valid (not expired)”, “Permit QR code” (RERA / ADREC), “Permit verified” (RERA / ADREC), or “No permit needed (…)”; plus “Missing: …” in yellow.
- Sold / rented listings show “This listing is marked sold — nothing to check.” and no actions.

3. Who can do what

Action	Super Admin	Agency	Agent
See Listing Permits menu	**Yes**	**No**	**No**
Open `/crm/listing-permits` by URL	**Yes**	**Refused (403)**	**Refused (403)**
Approve & publish	**Pending, complete, not sold**	**No**	**No**
Take down	**Yes**	**No**	**No**
Validate permit / fix details	**In listing form**	**Own listings**	**Own + assigned**
See own listing’s permit status	**All**	**Cards, pills, banner**	**Cards, pills, banner**

4. Fields and validation

There are no input forms on these screens except the search box (max 100 characters; searches title, address, community, city, reference no, RERA ID, agency / agent name and permit number). Permit fields are entered in the listing form – see Module 07 section 4.

5. Test scenarios

Priority: **High** core flow / data loss / access · **Medium** · **Low** cosmetic. Prepare test listings with an Agency test account (Module 07). Note which approval mode the server uses (section 2.2).

	Scenario	Steps	Expected result
LP-01	**Access – Super Admin** High	1. Sign in to Admin, open the CRM. 2. Sidebar › Listings › Listing Permits.	List opens with intro text, **Verify a permit on DLD**, five cards with counts and the default card selected (section 2.1).
LP-02	**Access – Agency / Agent** High	1. Sign in as Agency; check the sidebar. 2. Type `/crm/listing-permits` and `/crm/listing-permits/<id>`. 3. Repeat as Agent.	No Listing Permits menu. Pages show an error instead of data (access refused); no approve / take down possible.
LP-03	**Status cards and counts** High	1. Click each card. 2. Compare counts with the rows (use pagination).	URL gets `?tab=…`; card highlighted; hint text changes; rows match the status; counts include Properties and Commercial and exclude sold listings.
LP-04	**Empty card** Low	1. Open a card with 0 listings.	“Nothing in <label> right now.”
LP-05	**Search** Medium	1. Search by title, reference, permit number, agency name, agent name. 2. Search for nonsense; clear with ×.	Matching rows within the selected card. No match: “No listings match your search.” × restores the card list.
LP-06	**Row details** Medium	1. Check rows with: future expiry, expiry within 30 days, past expiry, no permit number, no permit needed, not verified.	Chips: “Until <date>”, “N days left” (amber), “Expired <date>” (red), “No expiry date”, “No permit” (warning), “No permit needed”, “Verified with DLD/ADREC”, “Verified”, “Not verified”, “Awaiting approval”. Agency/Agent column shows owner and “Agent: …” or “No agent assigned”; MW Realty listings show “MW Realty”.
LP-07	**DTCM listing waits for approval** High	1. Agency saves a Dubai DTCM rent listing with number + future expiry. 2. Super Admin checks bell / notification email, then opens the pending card.	Super Admin notified; listing in pending card with “Awaiting approval”; owner got “Listing sent for approval”. Not on website.
LP-08	**Approve & publish** High	1. Open the DTCM listing, check Checklist (all green). 2. Click **Approve & publish** › confirm. 3. Check website and owner account.	Toast “Listing approved — it is live on the website.”; back on the pending card; listing now under Verified. Listing is Active and visible on the website; owner and agent receive “Listing approved”. History shows “Verified · <admin> · date” with “Approved by MW Realty.”
LP-09	**Cancel approve** Low	1. Click **Approve & publish**, then cancel the pop-up.	Nothing changes.

	Scenario	Steps	Expected result
LP-10	**Incomplete listing cannot be approved** High	1. Open a “Permit details needed” listing.	Checklist shows red items and “Missing: …”. No Approve card; a “Not on the website” card says permit details are incomplete. Only **Take down** is available.
LP-11	**Expired permit in pending** Medium	1. Agency saves a DTCM listing whose expiry date is in the past. 2. Open it in Listing Permits.	Status “Permit expired” (not pending); Expires shown in red; checklist “Permit valid (not expired)” red; no Approve card; card text “The permit expired…”.
LP-12	**RERA validated online (mode A)** High	1. (DLD validation connected) Agency validates a test RERA permit and saves. 2. Open it in Listing Permits.	Under Verified (not pending). Banner “Verified with DLD on …”; comparison table filled from DLD with mismatches highlighted; card “Permit verified … — the listing can be live.” Only Take down offered.
LP-13	**RERA not validated online** High	1. Agency saves a RERA listing with number, expiry, QR but no successful Validate (e.g. service not connected). 2. Super Admin opens it.	Pending card, row chip “Not verified”. Banner “Not verified…”; Approve card “The permit isn't verified with DLD. Check it on the DLD website (or the QR) before approving.” After approval the permit banner reads “Checked by MW Realty on …”.
LP-14	**Approval required mode (mode B)** High	1. (Mode B server) Agency validates a RERA permit successfully and saves. 2. Super Admin approves; then Agency changes the price and updates.	Listing waits under “Awaiting approval” even though verified; Approve card says “DLD verified the permit — check the ad matches it, then approve.” After the price change it returns to Awaiting approval and goes offline; Super Admin is notified again.
LP-15	**Comparison mismatch** Medium	1. On a listing verified online, compare permit vs ad values (e.g. price differs).	Differing rows are highlighted with a warning icon “Differs from the permit”. Matching rows are plain.
LP-16	**Take down a live listing** High	1. Open a Verified, Active test listing. Click **Take down** › confirm. 2. Check website, owner bell / email and owner’s Properties menu.	Toast “Listing taken down — it stays off the website until its permit details are changed.”; list opens. Listing in “Taken down” card, inactive, not on website. Owner gets “Listing taken down”; Properties menu badge +1; card shows “Taken down by MW Realty — update and validate the permit” with **Fix now**.
LP-17	**Taken down stays down until permit change** High	1. Owner edits only the description of the taken-down listing and saves. 2. Owner then changes the permit (e.g. expiry date or number), validates if possible, and saves.	Step 1: still Taken down. Step 2: status recalculated (Verified, Not verified, Awaiting approval… depending on permit and mode); history shows the change.
LP-18	**Take down not offered** Low	1. Open a listing already in Taken down. 2. Open a sold listing’s review page by id.	Taken down: no Take down card. Sold: “This listing is marked sold — nothing to check.” and no actions.

	Scenario	Steps	Expected result
LP-19	**Owner side – not live reasons** Medium	1. As owner, open edit form of listings in each status.	Banners: Awaiting approval “Not on the website yet: waiting for MW Realty to approve this listing…”; Not verified “…the permit isn't verified. Click Validate…”; Expired “The permit expired, so the listing is offline…”; Taken down “MW Realty took this listing down…”; Permit details needed lists what is missing. Button **Open permit details** opens Core details.
LP-20	**Expiry job** Medium	1. Ask a developer to set a Verified test listing’s permit expiry to yesterday and run the daily expiry job (or wait until the next day).	Listing moves to “Permit expired”, switched off and removed from website; owner gets “DLD permit expired”; history entry by System “DLD permit expired on …”.
LP-21	**Expiry reminder** Low	1. Verified listing with expiry in 5 days; after the daily job, check the owner’s bell / email. Run again next day.	One “DLD permit expiring soon” notification; no repeat the next day.
LP-22	**Renewal after expiry** Medium	1. Owner opens an expired listing, enters the renewed permit number / expiry, validates, updates.	All fields editable (no padlocks). Listing leaves “Permit expired”; Verified (mode A, validated) or pending. Owner must switch it Active again if needed.
LP-23	**No-permit listings** Medium	1. Open a “None (DIFC/JAFZA only)” listing and a Northern Emirates (other city) listing.	None: pending; permit card “DIFC / JAFZA free-zone listing — no advertising permit is issued.”; Approve card “No advertising permit is issued for this listing — check the listing details, then approve it.” Northern: Verified, “No permit needed”.
LP-24	**Review page links** Low	1. Click **Full listing**, the QR image, the verification link, **Check permit number on DLD**, “Back to …”.	Full listing opens the CRM detail page (Properties or Commercial) in a new tab; QR and links open in a new tab; DLD button opens the DLD validation website; Back returns to the listing’s status card.
LP-25	**Review history** Medium	1. Open a listing that went through several statuses.	Newest first; each entry shows status label, actor (agency / agent name, admin, or System), date-time and note. New listing with no changes: at least the creation entry; otherwise “No history yet.”
LP-26	**Pagination** Low	1. On a card with more than 20 rows, go to page 2; refresh.	“Showing 21–40 of N”; page kept in URL after refresh.
LP-27	**Super Admin listing auto-approval** Medium	1. As Super Admin, add a DTCM listing in Properties with complete permit details.	Saved directly as Verified (history “Approved on save (MW Realty listing).”); no pending entry; no Super Admin notification.
LP-28	**Mobile width** Low	1. Open the list and a review page at about 375 px.	Cards and rows stack; action cards appear below the details; no page-wide horizontal scroll.

6. Expected results checklist

- ☐ Only Super Admin can open Listing Permits and approve / take down.
- ☐ Cards, counts, search and pagination return the right listings; sold listings are excluded.
- ☐ Review page shows correct permit, QR, expiry, verification state, comparison, checklist and history.

- [ ] Approve is only possible for pending, complete, unsold listings; it publishes the listing and notifies the owner.
- [ ] Take down removes the listing from the website, notifies the owner and stays until permit details change.
- [ ] Expired permits go offline automatically; a single 7-day reminder is sent.
- [ ] DTCM and None always need approval; RERA / ADREC follow the server's approval mode.

7. Known behaviour (not bugs)

By design:

- In mode A a RERA / ADREC listing validated online never appears in the pending card – it goes straight to Verified.
- When DLD / ADREC validation is not connected, all RERA / ADREC listings stay "Not verified" until Super Admin approves them.
- Approving switches the listing Active even if the owner had it Inactive; the owner can switch it off again.
- There is no "request changes" note: Take down sends a standard message; explain the reason to the owner outside the system if needed.
- Verified listings can be live only if the owner has them Active; Listing Permits does not show the Active switch.
- The "Verified / Saved" column shows the review date on the Verified card and the submitted / saved date on the others.

Test data cautions: use only test listings and test permit numbers. Do not take down or approve real client listings on a shared server. Do not run the expiry job on production. Do not validate real permits of other brokers.

8. Reporting a bug

Include: Super Admin account, listing ID / reference, permit type and emirate, status before and after, approval mode, DLD / ADREC validation result, expiry date, steps, expected vs actual, exact message, time, screenshot. Mask real permit numbers and contact details.
