MW REALTY CRM · TESTER HANDBOOK · MODULE 13

Marketing Properties

Super Admin's hand-picked list behind the home page “Realty Property” section and the public `/marketing-properties` page

Where: CRM sidebar › Listings › **Marketing Properties** (`/crm/marketing-properties`). **Who:** Super Admin only (opens the CRM from Admin). Agencies and agents never see this menu. No KYC or plan lock applies.

1. What this module does

MW Realty chooses listings from any agency or agent and puts them, in a chosen order, on the **Marketing list**. The first 12 listings show in the home page section **Realty Property**; all of them show on the “View more” page `/marketing-properties` (browser tab “Realty Properties”), in the same order. Nothing is paid and the listings themselves are not changed.

1 Agencies & agents

Search and tick one or more accounts (chips appear; **Clear**). Each row shows type (Agency / Agent) and number of active listings.

2 Their properties

Active listings of the ticked accounts with a count; search by title or reference; tick and click **Add selected (N)**. Listings already on the list show “On list”.

Marketing list

The list in order with position numbers, **Drag to reorder**, ↑ / ↓ buttons and remove (bin). A divider marks the home-page cut-off. **View on website** opens the public page.

2. How it works (business rules)

Tick accounts → Tick listings → Add selected → Top of list → Reorder / remove → Website updates

- **Adding:** new listings go to the **top** of the list (in the order ticked) and flash briefly. Listings already on the list are skipped. Message: “1 property added to the top of the list.” / “N properties added…” or “Those properties are already on the list.”
- **Which listings can be picked:** only **active** listings whose owner is one of the ticked accounts, or where a ticked agent is the listing agent. MW Realty's own listings (no owner account) are not offered. Up to 500 per add.
- **Accounts list:** agencies first, then agents, alphabetical; search by name, company name or email; 20 at a time, more on scroll.
- **Order:** drag a row, or use ↑ / ↓. The new order saves straight away (“Order saved.”).
- **Home cut-off:** rows 1–12 are above the divider “Above this line: shown on the home page · below: only on the “View more” page”.
- **Removing:** confirm “Remove from the list?” (“…will no longer show in Realty Property.”). Message “Removed from the list.” The listing itself is not deleted or changed.
- **Website:** changes show on the home page and `/marketing-properties` straight away (the cache is cleared on every change). The public page keeps Super Admin's order (it is not shuffled) and includes residential and commercial listings. It has its own map view `/marketing-properties/map` .
- **Inactive listings:** a listing on the list that later becomes inactive (deactivated, permit expired, sold or rented) stays on the CRM list but is hidden on the website; the home section then shows the next active

ones.

- **Empty list fallback:** while the list has no active listing, the home “Realty Property” section shows the latest listings automatically (skipping those already in the Luxury slider) and its button links to `/properties`. Once something is picked, the button links to `/marketing-properties` (unless Admin set a custom link in Common Titles › Realty Property).
- **Headings:** the section eyebrow, title, description and button text come from Admin › Common Titles › Realty Property, and are reused on the `/marketing-properties` page.

3. Who can do what

Action	Super Admin	Agency	Agent
See menu / open page	**Yes**	**No**	**No**
Add, reorder, remove	**Yes**	**No**	**No**
Call the page / its data directly	**Yes**	**Refused**	**Refused**
See the public page	**Yes**	**Yes**	**Yes (anyone)**

4. Fields and validation

Item	Rules
Accounts to load listings	At least 1, at most 50 ticked. Without any: “Choose an agency or agent above to see their listings.” and the property search is disabled.
Add selected	Disabled until at least one listing is ticked. 1–500 listings per click. Inactive or already-listed ones are skipped.
Empty / error texts	“No agencies or agents yet.” · “These accounts have no active listings.” · “Nothing matches your search.” · “Could not load. Try again.” · list empty: “Nothing picked yet — the home page shows the latest listings automatically until you add some.”

5. Test scenarios

Priority: **High** core flow / public site / access · **Medium** · **Low** cosmetic.

	Scenario	Steps	Expected result
MK-01	**Access — Super Admin** **High**	1. Admin › CRM › Listings › Marketing Properties.	Page “Marketing Properties” loads with the two pickers and the Marketing list.
MK-02	**Access — Agency / Agent** **High**	1. Sign in as Agency, then Agent; check sidebar; open `/crm/marketing-properties`.	No menu item. Direct URL shows no data (access refused).
MK-03	**Account search and multi-select** **Medium**	1. Search an agency name, tick it; search an agent, tick it. 2. Remove one chip; click **Clear**.	Chips for each ticked account; properties list shows listings of all ticked accounts with a count; removing / clearing updates the list and clears ticked listings.

	Scenario	Steps	Expected result
MK-04	**Only active listings offered** High	1. Tick an account that has active and inactive listings.	Only active listings appear (for an agent, also listings where they are the listing agent).
MK-05	**Add listings** High	1. Tick 3 listings; click **Add selected (3)**.	“3 properties added to the top of the list.” They appear at positions 1–3 and flash; in the picker they now show “On list”.
MK-06	**Duplicates skipped** Medium	1. Try to add a listing already on the list (e.g. via another account that is its listing agent).	No checkbox (“On list”) — or if sent, “Those properties are already on the list.” No duplicate row.
MK-07	**Property search** Low	1. Search by part of a title, then by reference.	Matching listings only; nonsense gives “Nothing matches your search.”
MK-08	**Reorder by arrows** High	1. Click ↓ on row 1, ↑ on the last row. 2. Reload the page.	“Order saved.” toast; order persists after reload. ↑ disabled on first row, ↓ on last.
MK-09	**Reorder by drag** Medium	1. Drag a row to a new position; reload.	Drop marker shows; new order saved and kept.
MK-10	**Home cut-off divider** Medium	1. Have 13+ listings on the list.	Divider after row 12; rows 1–12 highlighted as home rows.
MK-11	**Home page section** High	1. Open the website home page; find “Realty Property”.	Shows the first 12 active list items in the CRM order; button opens `/marketing-properties`.
MK-12	**“View more” page** High	1. Click **View on website** (or open `/marketing-properties`).	Browser tab “Realty Properties | MW Realty”; all active list items (residential and commercial) in CRM order; paging works; map view `/marketing-properties/map` shows the same listings.
MK-13	**Instant website update** High	1. Move a listing to position 1; reload home page. 2. Remove a listing; reload `/marketing-properties`.	Changes visible immediately on both pages.
MK-14	**Remove from list** High	1. Click the bin icon, confirm **Remove**. 2. Check the listing in Properties.	“Removed from the list.”; positions renumber; listing itself unchanged and still live on normal pages.
MK-15	**Listed item becomes inactive** Medium	1. Deactivate (or mark sold) a listing that is on the list. 2. Check CRM list and website.	Still on the CRM list; hidden from home and `/marketing-properties`; next active listing fills the home section.
MK-16	**Empty list fallback** Medium	1. Remove every listing (use a test environment). 2. Open home page.	CRM shows “Nothing picked yet — …”. Home “Realty Property” shows automatic latest listings; button goes to `/properties`.
MK-17	**Common Titles text** Low	1. In Admin › Common Titles › Realty Property change the title; reload home and `/marketing-properties`.	New heading on both.

	Scenario	Steps	Expected result
MK-18	**Large account (scroll loading)** Low	1. Tick an account with 20+ listings; scroll the properties box.	More listings load on scroll; status line updates.
MK-19	**Phone width** Low	1. Open the CRM page at ~375 px; open the public pages on a phone.	Panels stack; ↑ / ↓ buttons usable (drag may be hard on touch); public cards readable.

6. Expected results checklist

- [ ] Only Super Admin can see and change the list.
- [ ] Only active listings of ticked accounts can be added; no duplicates.
- [ ] New items land on top; order changes are saved and survive reload.
- [ ] Home “Realty Property” shows the first 12 active items in order; `/marketing-properties` shows all active items in order.
- [ ] Website updates straight after add / remove / reorder.
- [ ] Removing never deletes or changes the listing.

7. Known behaviour (not bugs)

- Inactive or sold items stay on the CRM list (not marked as inactive there) but are hidden on the website, so the home section may show item 13 when one of the first 12 is inactive.
- Accounts awaiting KYC can also appear in the account picker; only their active listings can be added.
- MW Realty's own listings (no owner account) cannot be added here.
- The public page is headed “Realty Properties” (or the Common Titles › Realty Property title) although the CRM menu is “Marketing Properties”.
- The public `/marketing-properties` page keeps the CRM order; other listing pages shuffle their default order.

Test-data cautions: this list is shown on the live home page. On a shared or production site, change it only with permission, use test listings, and restore the original order when finished (write it down first).

8. Reporting a bug

Include: Super Admin user, accounts ticked, listing references, action (add / reorder / remove), list position before and after, website URL checked and what it showed, time, expected vs actual, screenshot.
