MW Realty: Project & Workflow Overview

What the product is, who uses it, how the public website, Admin and CRM work together, and how to test it

Read this first. This is the first document in the tester handbook. It explains the whole system so that you can test any module. The 23 module guides (01–23) then go into detail, screen by screen. When a module guide and this overview seem to disagree, the module guide is more specific: follow it, and tell the team about the difference.

1. What MW Realty is

MW Realty is a **real-estate marketplace for the UAE** with a built-in **CRM for agencies and agents**. Buyers and tenants search residential and commercial listings on the public website and contact the agency or agent behind each listing. Agencies and agents publish their listings and work their enquiries (called **leads**) in the CRM. The MW Realty team runs the platform from the **Admin (CMS)**. They approve partners, set up plans and manage the website content.

In one sentence: what a visitor does on the website becomes a tracked lead, and the system sends that lead to the right agency or agent to follow up.

The three areas and the shared services

1. Public website (`/`)

Property search, listing pages, agency and agent profiles, blogs, market insights, calculators, contact forms, AI chat, customer accounts (wishlist, saved searches).

2. Admin / CMS (`/admin`)

MW Realty staff only. Website content, partner (client) accounts and KYC approval, plans, payments, coupons, credits, support tickets, translations, SEO, staff roles and permissions.

3. Partner CRM (`/crm`)

Agencies and agents: dashboard, leads, listings, Premium, ads, team, integrations, reports, support, profile/KYC, security, plans and credits. The Super Admin also uses it, with a global view of all accounts.

Shared services

One backend and one database serve all three areas (and a mobile app API). Shared services: visitor tracking, emails and bell notifications, background jobs, media storage, Stripe payments, and the Facebook and Property Finder connections.

Who uses it (user types)

User type	Signs in at	What they do
Visitor	No sign-in	Browses and searches. Sends enquiries, viewing requests and contact forms, and uses the AI chat. Activity is tracked anonymously by a browser cookie until the visitor gives contact details.
Customer account (shown as “User”)	`/login` › **User** tab, or “Continue with Google”	A buyer or tenant account. Wishlist (heart icon), saved searches, My Enquiries and Account Settings at `/profile`. Customers cannot open the CRM.

User type	Signs in at	What they do
Agency (company account)	`/login` › **Agent / Agency** tab	Owns the plan, credits, listings, leads and a team of agents. Can make two-factor authentication (2FA) compulsory for its agents.
Agent	`/login` › **Agent / Agency** tab	Either **independent** (has their own plan and credits, works like a one-person agency) or a **member of an agency** (uses the agency's plan and credits and works the leads assigned to them).
CMS staff	`/admin`	Admin users with a role. Each menu and action needs a permission (for example *blogs.edit*), so different staff see different menus. Only the Super Admin can open the CRM.
Super Admin	`/admin`, then the **CRM** button in the top bar	Full Admin access. In the CRM they have no account of their own. They see every account's data, plus modules that only they can use: Website Leads, Listing Permits, Marketing Properties, Property Options and ad review.

Old links `/agent-login`, `/agency-login` and `/portal/login` all lead to `/login`. The same applies to `/agent-signup` and `/agency-signup`, which lead to `/signup`.

2. Public website: from discovery to enquiry

The website is a single-page app. Its content comes from the backend. Listings appear only while they are **switched on** and **allowed to be live** (see section 6A). Banners, home sections, filters, blogs and other copy are managed in Admin.

Page / tool	URL	What it does
Home	`/`	Banner search, New Projects by city, Premium, Luxury Projects, “Realty Property” (the Super Admin’s Marketing Properties list), communities, popular places, testimonials and the ad slider.
Properties search	`/properties`, `/properties/map`	Filters (Purpose, Location / Title with suggestions, Property Type, Price Range, Bedrooms, Bathrooms, Area, features, amenities), list or map view, **Save Search**, the **Custom Property Request** form and wishlist hearts.
Commercial	`/commercial`, `/commercial/map`	Commercial listings only, with their own filter set.
Premium	`/premium-properties` (+ `/map`)	Listings currently featured as **Premium** (from a plan quota or paid with credits).
Marketing properties	`/marketing-properties` (+ `/map`)	The full list the Super Admin curates in CRM › Marketing Properties, in the same order.
Property details	`/property-details/{slug}`	Tabs Overview, Features & Amenities, Gallery and Floor Plans. Also: permit details, nearby places, Similar Properties, the **Enquire About This Property** form (**Send Enquiry**), **Request Viewing**, brochure and floor-plan downloads (contact details first), and call/WhatsApp buttons.
Agents / Agencies	`/agents`, `/agent-details/{slug}`, `/agencies`, `/agency-details/{slug}`	Public profiles of approved partners with their listings. Each profile has a property request form (“find me a property”) that goes to that agent or agency.
Content	`/blogs`, `/market-insights`, `/careers`, `/about`, legal pages, landing pages `/{slug}`	Content managed in Admin. Careers has an application form. A form on a landing page is captured as an enquiry.
Calculators	`/mortgage-calculator`, `/eligibility-calculator`, `/rent-vs-buy-calculator`, `/refinance-calculator`	Calculations run in the browser. Copy, FAQs and enquiry-form text come from Admin › Calculators.
Contact	`/contact`	Office details and the contact form. A submission is saved in Admin › Enquiries and the admin is emailed.
Sign up / Log in	`/signup`, `/login`, `/verify-email`, `/forgot-password`	Sign up has three **Account Type** tabs: **User**, **Agent** and **Agency**. Log in has two tabs: **User** and **Agent / Agency**. Every sign-up confirms the email address with a one-time code. Google sign-in is for customers only.
Customer profile	`/profile`	Overview, Wishlist, Saved Searches, My Enquiries and Account Settings. A guest who clicks a heart is sent to `/login`.
AI chat widget	All pages	The visitor can ask one question freely. To keep chatting, they must fill in the **Want to keep chatting?** form (name, email, phone). The AI answers only with listings that a real site search returns. Conversations are saved.

Page / tool	URL	What it does
Language & currency	Header	The language dropdown lists the languages enabled in Admin (English and Arabic files exist; Arabic switches the layout to right-to-left). Prices are stored in AED. The currency switcher converts them with Admin-set rates, and the browser remembers the visitor's choice.

How a visitor action becomes a lead or tracked activity

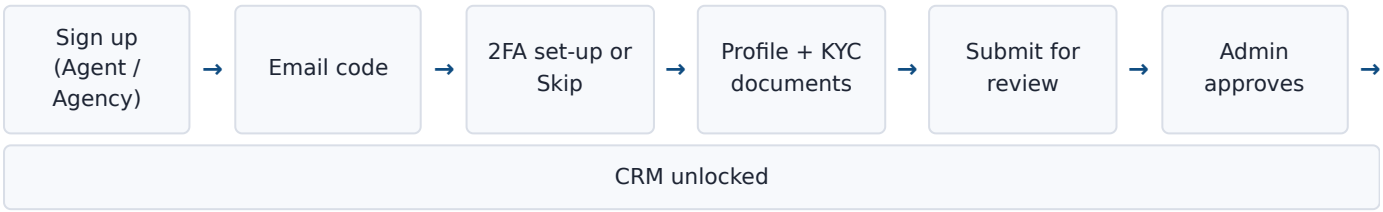

Every browser gets an anonymous visitor cookie. Page views, listing views, time on page, searches, favourites, saved searches, chats and contact-button clicks are recorded for it. When the person **identifies themselves** (any form, the AI chat details form, or a customer sign-in), they become a **website lead**. Their earlier anonymous activity is then attached to them.

Visitor action	What the system creates	Where you see it
Send Enquiry, Request Viewing, brochure or floor-plan download on a listing	A CRM lead for the listing's owner. It is routed to an agent (see 6B). The owner and agent get a bell notification and an email.	CRM › Leads (owner or agent). The visitor's activity shows on the lead.
Property request form on an agent or agency profile	A CRM lead for that agent or agency	CRM › Leads
Custom Property Request (Properties page)	A lead with no owner (no listing attached). The Super Admin is notified.	Super Admin: unassigned leads / Website Leads
Contact form, landing-page form, AI chat details, customer sign-up or sign-in	A website lead in the Super Admin's **pool**. Contact and landing-page forms are also saved under Admin › Enquiries.	CRM › Website Leads (Super Admin)
A pool lead visits the same listing, or the listings of the same agent or agency, **twice**	The lead is routed automatically to that agency or agent as a CRM lead and stays with that account	CRM › Leads of that account
Listing cards seen, contact clicks, ad impressions and ad clicks	Counters	Listing performance, Reports, the Advertisements report

> **One person, one account.** The system matches leads by email or phone. If the person is already a lead of one agency or agent, a new enquiry from them stays with that account. Inside one account, a repeat enquiry with the same email or phone is **merged** into the existing lead (the enquiry count goes up and a "repeat enquiry" entry is added). No duplicate lead is created. Use a new email and phone when you need a fresh lead.

Form limits per network (IP) address: about 20 lead/enquiry submissions per hour, 10 sign-ups per hour and 5 login attempts per minute for each email. AI chat allows 8 messages per minute and 150 per day. If you hit a limit you will see a "too many requests" error. This is expected and is not a bug.

3. Partner lifecycle: from sign-up to full access

1. **Registration** (`/signup`, Agent or Agency tab). The required fields include name, email (must not already be used), phone and password (at least 8 characters, entered twice). The Agency tab also asks for the agency name. An agent can pick an existing agency at sign-up. This sends a **join request** to that agency, and the agent starts as independent until the request is accepted and approved. Every new account starts with status **pending**, KYC **draft**, and the default **Free** plan.
2. **Email verification.** A code is emailed and is valid for **10 minutes**. A wrong or old code shows “Invalid or expired code.” and **Resend** sends a new one. In a test environment, codes may be turned off and replaced by a fixed test code. Ask the team which applies.
3. **Two-factor authentication (2FA).** After the code is accepted, the account goes to `/crm/security/two-factor`. There the user sets up an authenticator app or chooses **Skip for now**. If an agency has made 2FA compulsory, its agents cannot skip, and every CRM page stays blocked until 2FA is set up. Once 2FA is on, signing in from a new browser asks first for a code sent by email, then for the authenticator code. A browser that has been verified once is trusted after that.
4. **Profile and KYC** (CRM › My Profile). Identity details, registration details (agent: BRN and brokerage; agency: trade licence, ORN, office), tax (TRN), public profile, and documents. Documents are JPG, PNG or PDF, up to 4 MB each: Emirates ID, passport, RERA card / RERA certificate, trade licence. A completeness percentage and a to-do list show what is missing.
5. **Submit for review.** The Super Admin gets a bell notification and the site’s notification address gets an email. The CRM banner changes to “KYC submitted — waiting for review”.
6. **Admin review** (Admin › Clients). The admin can approve, reject (with a reason), mark single documents as verified or rejected (a rejected document sends KYC back as “changes requested”), or **request information** about chosen sections. Approval is only possible after the partner has submitted. Each decision emails and notifies the partner.

What is locked before approval

Until the account is **approved**, the CRM shows a banner: “Finish your KYC to unlock the CRM” (not submitted yet), “KYC submitted — waiting for review” (waiting), or “Your application needs changes” (rejected, with the reason). Locked menu items show a padlock with the tooltip **“Unlocks after KYC approval”**. The lock is also enforced by the server: opening a locked screen by URL is refused with “Your account is pending Super Admin approval.”

Available before approval

Dashboard, My Profile, Security (2FA), Contact Us (support tickets), Help Desk, notifications, plan payment history and invoices.

Locked until approval

Leads, Lead Insights, Master, Integrations, Properties, Commercial, Premium, Advertisements, Agents, Nearby Places, Listing Settings, Reports, Plans (choosing or buying) and Credits.

Plans and gated features

Each account has a plan (Free or paid, monthly or yearly). An **agency agent uses the agency’s plan** and has nothing to buy, as long as the agency’s plan includes team agents. Plans control:

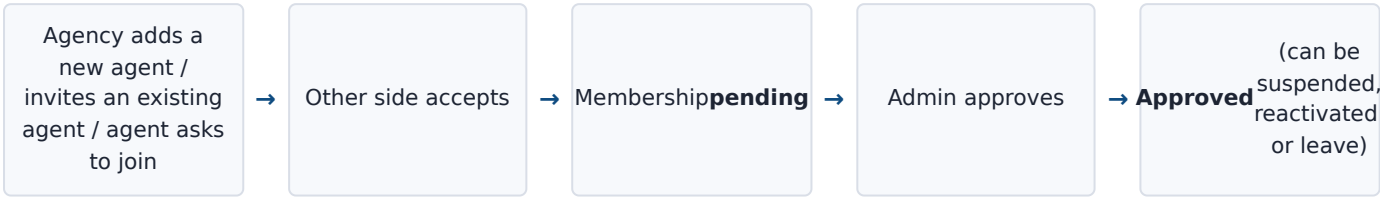

- **Listing allowance:** on the Free plan, a cap on the number of listings held at once. On a paid plan, a number of **new listings per calendar month**. Deleting a listing does not give the slot back, and unused slots do not carry over to the next month.

- **Premium quota** (listings featured per month or at once, with a maximum number of days), **website ads** (ads per month and the longest booking), **team agents** (limit), and **Reports** access.
- **Gated sections:** Lead insights, Property insights, Listing settings (watermark), Facebook Lead Ads integration and Property Finder integration. A locked section shows a padlock with **“Upgrade your plan to unlock this”** (Reports: “Upgrade your plan to unlock reports”; Advertisements: “Upgrade your plan to advertise on the website”). Opening the page shows an “Unlock …” card instead of the content.

Credits

Credits are pay-as-you-go add-ons next to the plan. They are bought with **Top up** (card, through Stripe) or granted by Admin. Each batch **expires** after a validity period set in Admin. Credits pay for an **extra listing** after the plan allowance is used up, for **Premium** for 7, 15 or 30 days without using the plan quota, and for ads beyond the plan’s ads per month. The wallet belongs to the account that owns the listings, so agency agents spend the agency’s credits and have no Credits page of their own. Admin can switch credits off. Buying is then refused, but any credits already held can still be used.

Agency and agent relationship

An agent has one account for life. Joining, leaving and re-joining only add membership records. The agency’s plan limits how many agents it can have. An agent created by an agency gets a **set-password email** when the admin approves them. An agent manages invitations and join requests under **My Agency**. An agency sees join requests as a badge on **Agents**.

4. CRM: the partner workbench

The CRM (`/crm/...`) builds its side menu for the signed-in account. Items may be hidden (wrong role), locked (padlock plus a reason in the tooltip) or show a red **badge** count. Write down your role, KYC state and plan whenever you report what you see.

Section › Module	What it is	Who sees it	Lock / badge	Guide
Dashboard	Overview of leads, pipeline, follow-ups and listings	All	Never locked	01
Leads › Leads	Enquiries: list, detail, notes, stage, tags, source, assignment, import/export, Deleted Leads	Agency, Agent, SA	KYC	02
Leads › Lead Insights	Website activity of your own leads (views, time spent, chats)	Agency, Agent, SA	KYC, then plan (Lead insights)	03
Leads › Website Leads	Identified website visitors and the unrouted pool. Transfer to an account.	SA only	Badge: new pool leads from the last 7 days	04
Leads › Master	Stage, Tag and Source lists used on leads. **Property Options** (listing-form dropdowns) is for the SA only.	Agency, Agent, SA	KYC	05
Leads › Integrations	Facebook Lead Ads and Property Finder	Agency, Agent, SA	KYC, then plan (either integration)	06

Section › Module	What it is	Who sees it	Lock / badge	Guide
Listings › Properties	Residential listings: create or edit, photos, DLD permit, status, performance	Agency, Agent, SA	KYC. Badge: listings taken down or with an expired permit.	07
Listings › Commercial	The same as Properties, for commercial listings	Agency, Agent, SA	KYC	08
Listings › Listing Permits	Permit review queue: approve or take down	SA only	None	09
Listings › Premium	Live and scheduled Premium (featured) listings. Book several at once.	Agency, Agent, SA	KYC	10
Listings › Advertisements	Book banner ads on site pages and see their report. SA: MW Realty's own ads, review of client ads, placements.	Agency, independent Agent, SA (hidden for agency agents)	KYC, then plan (ads). SA badge: ads waiting for review.	11
Listings › Sold Listings	Sold or rented listings, proof documents, put back on the market	Shown only when the account has sold/rented listings	None	12
Listings › Marketing Properties	The curated list for the home page "Realty Property" section and `/marketing-properties`	SA only	None	13
Listings › My Agency	The agent's agency membership: invitations, join requests, leave	Agents only	Badge: invitations	14
Listings › Agents	The agency's team, adding agents, lead-assignment settings (round robin)	Agency, SA	KYC. Badge: join requests.	14
Listings › Nearby Places	Places shown near listings (a shared list plus your own)	Agency, Agent, SA	KYC	15
Listings › Listing Settings	Watermark stamped on listing photos	Agency, Agent, SA	KYC, then plan (Listing settings)	16
Insights › Reports	Leads, Properties, Sales and Agents reports	Agency, Agent, SA	KYC, then plan (reports access)	17
Support › Help Desk	Quick guides for each screen (also the "!" icon in the top bar)	All	None	18
Support › Contact Us	Support tickets to MW Realty	Agency, Agent (not SA)	Badge: tickets waiting for your reply	19
Account › Credits	Balance, history, calculator, Top up	Agency, independent Agent (not agency agents or SA)	KYC. Hidden when credits are off and none are held.	20
Account › My Profile	Profile, KYC documents, submit for review, public page preview	Agency, Agent	Never locked	21
Account › Security	2FA, recovery codes, agency 2FA enforcement	Agency, Agent	Never locked	22

Section › Module	What it is	Who sees it	Lock / badge	Guide
Account › Plans	Current plan, upgrade or downgrade, checkout, payments and invoices	Agency, Agent	KYC (choosing or buying a plan)	23

SA = Super Admin. The Super Admin's account menu has only **Back to Admin**. A sidebar **credits card** appears when the plan allowance is used up or nearly used up, or when the account holds credits.

Rules that apply across the CRM

- **Data scope.** An agency sees its own and its team's data. An agent sees their own data and what is assigned to them. The Super Admin sees everything. A record that belongs to another account must never open, not even by typing its ID in the URL.
- **Saved does not mean live.** A listing appears on the website only when it is switched on **and** its permit state allows it (section 6A).
- **Plan limits are checked when you act** (creating a listing, booking Premium or ads, adding agents). When the limit is reached, the CRM offers credits or an upgrade.
- **Session security.** If an account is disabled in Admin, or its password changes, its other open sessions are signed out on their next click.

5. Admin / CMS: operating the marketplace

The Admin (`/admin`) is used by MW Realty staff. The menu depends on each user's **role and permissions** (User Management › Admins, Roles, Permissions), so a missing menu item may simply mean a missing permission. Only the **Super Admin** gets the **CRM** button in the top bar. The table is an overview only. Admin screens are not covered by the 23 CRM guides, except where a CRM module depends on them.

Admin area	What it controls
Clients	Agent and agency accounts: KYC review (approve, reject, request info, per-document status), enable or disable, reset password or 2FA, assign a plan, payment status. Also agency–agent memberships (approve, reject, suspend, remove) and **plan upgrade requests**. Badges count what is waiting.
Plans, Payments, Coupons	Plan definitions (price, monthly or yearly, listing limit, Premium quota, ads, agent limit, reports, gated features), every plan payment with invoices, and discount codes (once, N months or forever).
Credits, Credit History	Turn credits on or off, set credit pricing and validity, grant credits to an account, and view or export the credit ledger of every account.
Support Tickets, Help Desk	Reply to tickets from CRM › Contact Us. Edit the quick-guide content shown on each CRM screen.
Website Content	Home sections and headings, banners, about, why choose us, builders, testimonials, FAQs, blogs and categories, market insights (topics, regions), landing pages (and their enquiries), careers (vacancies, candidates), calculators, contact page, legal pages.
Filters & locations	Search filters for each listing page (Properties, Commercial, Premium, Off-plan), communities, Find Properties, locations. The dropdowns of the listing form are now edited in CRM › Master › Property Options.
Enquiries, Newsletter, Unassigned leads	Contact-form enquiries, newsletter sign-ups, and property leads that arrived with no owner (to hand to a partner).
General Settings & SEO	Languages and Translations (website text), Currencies (rates, default), Site Information, metadata, sitemap, robots.txt, URL redirects and 404 logs.

Admin area	What it controls
Done in the CRM by the Super Admin	Listing permit review (Listing Permits), ad management and client ad review (Advertisements), Website Leads, Marketing Properties, Property Options, review of Property Finder imports.

6. End-to-end flows (the business logic)

A. Partner onboarding → first listing → permit → live on the site

Approved partner → Create listing (plan slot or credit) → Permit details complete? → Validated / approved → Switch on → Live on website

UAE law requires an **advertising permit** for most listings. MW Realty never issues permits. It records them, checks them, and keeps a listing off the website until the permit is in order. The permit needed depends on the emirate:

- **Dubai:** RERA/DLD permit (Trakheesi, with a Madmoun QR code), DTCM (holiday homes, rent only), or "None" (DIFC / JAFZA). **Abu Dhabi** and the city of **Al Ain**: ADREC permit. **Other Northern Emirates cities:** no permit needed.
- The system recalculates the permit state on every save. The states are: **Permit details needed** (incomplete), **Not verified** (entered but not validated or approved yet), **Verified** (may be live), **Taken down** (removed by the Super Admin with a reason), and **Permit expired**.
- A RERA or ADREC permit is checked with **Validate** in the listing form when the authority's online check is connected. DTCM and "None" always wait for Super Admin approval on **Listing Permits**. The environment can also be set so that **every** listing waits for approval. Ask the team how your test environment is set up. The online DLD/ADREC check may not be connected there.
- A **Verified** listing that is edited without changing permit details (description, photos) stays live. Changing the permit, price, purpose, type, bedrooms or size sends it back for checking.
- The website switch can only stay on while the listing is Verified, not sold, and its permit has not expired. Each permit number can be used on only one listing. Listings created by the Super Admin themselves (MW Realty's own) are approved when saved, once their permit details are complete.

B. Buyer enquiry → lead routing → follow-up

Visitor sends enquiry → Owner = listing's account → Duplicate? merge → Assign agent → Bell + email → Follow-up in Leads

Situation	Who gets the lead
The listing has an eligible agent (approved member of the same agency, account active)	That agent
The listing belongs to an independent agent	That agent
Agency listing with no eligible agent, and the agency's assignment mode is **automatic** for this kind of lead (property, generic or Facebook)	The next agent in the **round-robin** rotation. Suspended, pending or departed agents are skipped.
The agency is in **manual** mode, or has no active agents	The agency, unassigned. The agency assigns it by hand.

Situation	Who gets the lead
A listing or form with no owner (for example a Custom Property Request)	The Super Admin’s unassigned pool. The Super Admin is notified and can transfer it.

After that, the team works the lead in CRM › Leads: stage, tags, notes, follow-up, reassignment. Marking a listing **sold or rented** links it to the buyer’s lead, moves that lead to the “won” stage, and takes the listing off the website.

C. Website lead pool → transfer

Visitor identifies (chat / form / customer account) → Website Leads pool → 2 visits to one account’s listings = auto-route **or** Super Admin transfers by hand → CRM lead for the partner

Repeated views of one listing within 30 minutes count as a single visit. Once a person has been routed to an account, they stay with that account.

D. Plan purchase / upgrade → unlocks

Plans page → Choose plan + interval (+ coupon) → Stripe checkout (test card) → Plan active → Locks removed, limits raised

- **Upgrade:** charged now (the new price minus the unused part of the current period). A new billing period starts today. **Downgrade:** no refund. The account keeps the current plan until the next renewal. **Cancel:** auto-renew is turned off, and the account drops to Free when the period ends.
- When Stripe is not configured (or for a plan Stripe cannot sell), the choice becomes a **plan upgrade request** that an admin approves in Admin › Clients. An admin can also assign a plan directly. Each paid renewal creates a payment and an invoice.

E. Credits

Allowance used up → Credits card / Credits page → Top up (Stripe) or Admin grant → Spend on extra listing / Premium / ad → Batches expire

The batches that expire first are spent first. Cancelled or rejected bookings give their credits back.

F. Website ads

Partner books a banner (page, hours/days) → Pending → Super Admin approves / rejects → Runs in the page’s ad slider → Impressions + clicks report

Bookings start on the hour and last whole hours, in Dubai time. Each page has a limited number of client ad slots at any one time. Ads included in the plan are used first, and after that each booking costs credits. A booking that is rejected, cancelled before it runs, or still not reviewed when its time ends is closed, and its credits or allowance are returned.

G. Integrations

- **Facebook Lead Ads:** connect through Facebook Login, then link each Facebook Page to one account. New leads from that Page arrive automatically as CRM leads, and **Sync now** pulls in recent leads. A daily check flags Pages whose access has stopped working and emails the owner to reconnect.

- **Property Finder:** an agency or independent agent connects with an API key and secret. The first sync is **Import all listings**, later ones are **Sync new listings**. Imported listings are created off the website and wait for the Super Admin's review. Approving one puts it into the normal permit flow. Rejecting one deletes it, and it is never imported again. Plan limits stop the import when the plan is full. Agency agents can see the connection and run a sync, but cannot change it.

Background jobs you may notice

Job	When	Visible effect
Email and notification queue	Every minute	All emails are queued. Allow 1–2 minutes before you report a missing email. Sign-up and login codes are sent immediately.
Permit expiry	Daily, 00:05 UAE time	Listings whose permit has expired go off the website (status Permit expired). A reminder is sent 7 days before expiry.
Premium start/end	Every 15 minutes	Scheduled Premium starts, and ended Premium is removed. The change can take up to 15 minutes.
Ad settlement	Every 15 minutes	Client ads still unreviewed when their time ends are closed and refunded.
Credit expiry	Hourly (and whenever a balance is read)	An "Expired credits" line appears in the history.
Subscription renewal reminder	Daily, 09:00 UAE time	Email and bell notification the day before an auto-renewal.
Expired documents	Daily	Email when a passport, trade licence or TRN expiry date has passed (once per date).
Facebook Page check	Daily, 08:00	Broken Pages are flagged and a reconnect email is sent.
Visitor tracking clean-up	Daily, 03:30	Anonymous activity older than 30 days is deleted. The history of identified leads is kept.
Property Finder import	Its own queue	Long imports run in the background, and the screen shows progress.

Emails and bell notifications to expect

Partner receives

Sign-up code and new-device code. KYC approved, rejected, info requested, or document flagged. Agency membership changes. New lead (owner and assigned agent). Lead import finished. Listing sent for approval, approved, taken down, permit expiring or expired. Ad reviewed. Facebook leads synced or assigned, Facebook reconnect. Property Finder results. Ticket replies. Plan invoice, renewal reminder. Document expired.

Super Admin / site address receives

New KYC submission or resubmission. Plan upgrade request. Listing waiting for approval. Lead with no owner. Contact, landing-page, career and newsletter submissions. New support ticket messages.

7. How to test

Test environment and accounts to request

Ask the project team for the test site URL and for the accounts below. Do not create real partner accounts with real company documents.

Account	State	Used for
Super Admin	CMS login with the superadmin role	Admin, global CRM view, SA-only modules, approvals, transfers
Agency A	KYC approved, **paid** plan with all gated features, team agents, ads and Premium	Full CRM, round robin, integrations, reports
Agency B	KYC approved, **Free** plan	Plan locks (“Upgrade your plan…”), listing caps, credits
Agency C	KYC **pending** (not approved)	KYC locks, banners, refused URLs
Agent A1	Approved member of Agency A	Agent scope, assigned leads, agency plan inherited, no Credits or Advertisements
Independent agent	Approved, own plan	Agent with own plan, credits and ads
Customer	Website “User” account	Wishlist, saved searches, My Enquiries, tracking

Also ask: whether email codes are real or fixed, which mailbox receives test emails, whether Stripe is in test mode, whether listings need Super Admin approval, and whether the DLD/ADREC online check is connected.

Test data rules

- Use **disposable** emails and phone numbers that you control. Never enter real buyers’ or real agents’ contact details.
- Payments: **Stripe test mode and test cards only**. If a real payment page appears, stop and report it.
- Do not connect real Facebook Pages or real Property Finder accounts unless the team gives you test ones. Do not post real permit numbers that belong to other companies.
- Upload only sample images and dummy PDFs, within the size limits. Start test records with “TEST” so they are easy to find and clean up.

Browsers and devices

Test on current Chrome, plus at least one of Firefox, Safari or Edge, on desktop (1366 px wide or more) and at **mobile width** (about 375–414 px, a real phone or browser device mode). At mobile width, check that menus open, tables scroll instead of overflowing, and forms and dialogs fit on the screen. On the public site, check Arabic (right-to-left) on at least the main pages.

Checks that apply to every module

- ☐ **Access by URL:** paste a locked page’s URL (KYC- or plan-locked) or another account’s record ID. You must get a refusal or an “Unlock” card, never the data.
- ☐ **Role menus:** the menu matches the table in section 4 for each account type.
- ☐ **Refresh:** after saving, reload the page. Values, filters you applied and the current tab must behave consistently. No data may be lost.
- ☐ **Validation:** required fields, maximum lengths, formats and file types and sizes show clear messages next to the field. Nothing half-saved remains.
- ☐ **Double click:** pressing Save or Submit twice must not create duplicates.

- [ ] **Lists:** search, filters, sorting and pagination agree with each other. Empty states show a message.
- [ ] **Cross-area effects:** after a CRM action, check the public website (listing shown or hidden, Premium badge, ad visible) and the Admin side where relevant.
- [ ] **Notifications:** the expected bell notification or email arrives (allow 1–2 minutes), with correct names and links.
- [ ] **Language and currency** (public site): switching keeps you on the same page, and prices convert correctly.
- [ ] **Sessions:** logging out works. A disabled account is logged out.

Severity and priority

Severity	Meaning	Examples
Critical	Data loss or leak, security or access bypass, payment error, core flow fully blocked	Agent sees another agency's leads. A locked page opens by URL. A test card is charged twice.
High	A main feature is wrong or broken, with no workaround	Enquiry not routed. Listing live without a valid permit. Plan does not unlock.
Medium	Feature partly wrong, or a workaround exists	Filter ignores one value. Wrong count in a badge. Missing email.
Low	Cosmetic, text or layout issue	Typo, misaligned button, small overflow at mobile width.

The test scenarios in the module guides are tagged High (core flow, data or access), Medium or Low (cosmetic). Run all High scenarios first.

Bug report template

Title	Module – short description of the wrong behaviour
Environment	URL, browser and version, desktop or mobile width, language and currency
Account	Role (SA / Agency / Agent / Customer), account email, KYC state, plan
Record	Lead, listing, ticket or ad ID, or URL
Steps	Numbered steps from a known starting point
Expected / Actual	Quote the guide's expected result, then exactly what happened (exact message text)
Evidence	Screenshot or recording, time (UAE), whether it still happens after a refresh, and whether it happens every time
Severity	Critical / High / Medium / Low

Reading order of the module guides

1. **Start with the account:** 21 My Profile → 22 Security → 23 Plans → 20 Credits (these unlock everything else).
2. **Listings:** 07 Properties → 08 Commercial → 09 Listing Permits → 15 Nearby Places → 16 Listing Settings → 10 Premium → 12 Sold Listings → 13 Marketing Properties → 11 Advertisements.
3. **Team and leads:** 14 Agents → 05 Master Data → 02 Leads → 04 Website Leads → 03 Lead Insights → 06 Integrations.
4. **Overview and support:** 01 Dashboard → 17 Reports → 19 Contact Us → 18 Help Desk.

8. Glossary

Term	Meaning in MW Realty
Partner / client account	An Agency or Agent account. In Admin they appear under “Clients”.
KYC	“Know Your Customer”: the identity and licence details and documents a partner submits. Admin approves the account after reviewing them.
Approved / pending / rejected	Account status. Only **approved** accounts can use leads, listings and the other locked modules.
BRN / ORN / TRN	Broker Registration Number (agent), Office Registration Number (agency), Tax Registration Number.
Lead	A person who enquired, with contact details, stage, tags, source, notes and activity. A lead belongs to one account (owner) and may be assigned to one agent.
Website lead / lead pool	A website visitor who identified themselves. Until routed to an account, they wait in the Super Admin’s **pool** (Website Leads).
Round robin	Automatic assignment of agency leads to the agency’s active agents in turn, set on the Agents screen (automatic or manual mode, per kind of lead).
Stage / Tag / Source	Master lists for leads: pipeline step, labels, and where the lead came from.
Premium (featured)	A listing promoted for a period: Premium badge, Premium page and home section. Comes from the plan quota or is paid with credits.
Credits	Prepaid units with an expiry date, spent on extra listings, Premium or ads.
Plan allowance	The number of listings a plan allows: a monthly number on paid plans, a total cap on the Free plan.
Gated feature	A section only some plans include: Lead insights, Property insights, Listing settings, Facebook and Property Finder integrations. Reports and ads are also plan-based.
Advertising permit	The government permit needed to advertise a listing. **DLD/RERA** (Dubai, through Trakheesi, with a **Madmoun** QR code), **DTCM** (Dubai holiday homes), **ADREC** (Abu Dhabi and Al Ain). Form A is the owner–brokerage agreement behind a DLD permit.
Compliance (permit) status	Permit details needed · Not verified · Verified · Taken down · Permit expired. Only **Verified** listings can be live.
Live / switched on	The listing’s website on/off status. It can only be on while the listing is Verified, not sold, and its permit is valid.
House listing	A listing owned by MW Realty itself (created by the Super Admin, no partner owner).
2FA	Two-factor authentication with an authenticator app code. A new browser also needs an email code.
Bell notification	An in-app notification under the bell icon (CRM and Admin).

9. Technologies and versions

For reference only. Testers do not need to install anything. “Requires” is the allowed version range in the project files. “Locked” is the exact version installed for this code base. Sources: composer.json / composer.lock and package.json / package-lock.json. Server PHP, database, mail, Stripe keys and integrations are configured separately for each environment.

Area	Technology	Version in this project	Role
Backend language	PHP	Requires ^8.5 (dependency platform set to 8.5.0)	Server logic, APIs, Admin and CRM back end
Backend framework	Laravel	Requires ^13.0; locked v13.38.0	Routing, authentication, validation, queues, scheduled jobs
API authentication	Laravel Sanctum	^4.3; locked v4.3.3	Tokens for the mobile app and customer API
Social login	Laravel Socialite	^5.31; locked v5.31.0	“Continue with Google” for customers
Admin / CMS	MW CMS package (mightywarnerskochi/cms), Blade templates, Bootstrap 5.3	dev-main; roles via spatie/laravel-permission 6.25.0	Admin screens, roles and permissions, translations
Payments	Stripe PHP SDK	^21.3; locked v21.3.2	Plan subscriptions, checkout, credit top-ups, webhooks
Media	Cloudinary PHP	^3.1; locked 3.3.0	Image and file storage
Other backend	laravel-dompdf, Laravel Excel, libphonenumber-lite, HTMLPurifier, bacon-qr-code	v3.1.2; 4.0.5; 9.0.41; v4.19.1; v3.1.1	PDF invoices, lead import/export, phone validation, safe rich text, 2FA QR codes
Frontend framework	Vue (JavaScript ES modules)	Requires ^3.5.42; locked 3.5.42 (no Node version pinned)	Public website and CRM single-page apps
Routing	Vue Router	^4.6.4; locked 4.6.4	Page navigation on the public site and in the CRM
HTTP client	axios	^1.11.0; locked 1.20.0	Browser calls to the APIs
Styles	Tailwind CSS (+ @tailwindcss/vite)	^4.0.0; locked 4.3.3	Website and CRM styling
Build	Vite / laravel-vite-plugin / @vitejs/plugin-vue	Vite ^7.0.7 (7.3.6); plugin ^2.0.0 (2.1.0); plugin-vue ^6.0.8 (6.0.8)	Development server and asset build
Maps and UI	Leaflet, markercluster, MapLibre GL, GSAP, intl-tel-input	1.9.4; 1.5.3; 5.24.0; 3.15.0; 25.15.1	Maps and nearby places, animations, phone input with country code
Database / queue	MySQL or SQLite; Laravel database queue	Chosen per environment (default setting: SQLite; queue: database)	Application data; background emails and imports
Testing and docs (developers)	PHPUnit, Scribe	PHPUnit 12.5.40; Scribe 5.11.0	Automated tests; API documentation
