MW REALTY CRM · TESTER HANDBOOK · MODULE 08

Commercial

Commercial listings (offices, shops, warehouses, land…): same screens as Properties, a separate list and a separate website page

Where: CRM sidebar › Listings › Commercial (`/crm/commercial` , `/crm/commercial/create` , `/crm/commercial/:id` , `/crm/commercial/:id/edit`). **Who:** Super Admin, Agency, Agent. **Locks:** padlock “Unlocks after KYC approval” until KYC is approved; Listing Performance needs a plan with *Property insights*; adding listings uses the same plan allowance as Properties.

Read Module 07 first. Commercial uses exactly the same list screen, form, detail page, pop-ups, permit rules, statuses, validation and plan limits as Properties. This guide explains what is **different** and gives the commercial-specific tests. For every form field, permit case and message, use Module 07.

1. What this module does

Commercial is a second list of listings for commercial stock. A listing belongs to the menu it was created in: listings added from **Commercial** are shown on the website’s `/commercial` page, listings added from **Properties** on `/properties` . The listing never moves between the two menus.

List screen (`/crm/commercial`)

Title “My Commercial” (Super Admin: “All Commercial”). Same search, filters, Permit pills, plan chips, Grid / List, bulk actions, reorder and 16 per page as Properties – but only commercial listings.

Add / Edit form

Page title “Add Commercial Property” / “Edit Commercial Property”, buttons **Save Commercial Property** / **Update Commercial Property**. Same twelve tabs as Properties.

Detail screen (`/crm/commercial/:id`)

Same layout as a property; breadcrumb “Commercial › <reference>”.

Website

Active, verified commercial listings appear on `/commercial` (and its map view `/commercial/map`). Detail page is the same `/property-details/<slug>` .

2. How it works – what is different from Properties

Topic	Commercial behaviour
Which list / website page	Decided by the **menu** used to add the listing, not by the Category field. A listing added in Commercial with Category “Residential” is still a Commercial listing and shows on `/commercial` .
Labels	“Add Commercial Property”, “My Commercial”, toast “Commercial Property created successfully.” / “Commercial Property updated successfully.”, delete confirm “Delete this commercial property?”, empty state “No commercial yet. Add your first listing.”
Plan allowance	**Shared** with Properties. The chip tooltip ends “(Properties and Commercial combined)”. A listing added in either menu uses the same slot count.
Extra listing with credits	Same pop-up and flow as Properties. The credit cost is calculated with the commercial rate (depends on menu, offering type, property type and price).

Topic	Commercial behaviour
Display order	Separate order for the Commercial list. Drag / Move to only renumbers commercial listings; website `/commercial` follows it.
Permit pills	Counts only commercial listings.
Sidebar badge	The Commercial menu has **no** badge. Taken-down / permit-expired commercial listings are counted in the badge on the **Properties** menu.
Quality score	Bedrooms and bathrooms are not required for “Listing details” when the **Category** is Commercial (based on the Category field, not the menu).
Wrong-menu links	Opening a commercial listing through `/crm/properties/:id` or `/crm/properties/:id/edit` redirects to the Commercial URL, and the other way round.
Other modules	Premium (Module 10), Sold Listings (12), Credits and Listing Permits (09) show these listings with a “Commercial” tag or open them under `/crm/commercial` .

Everything else is identical: permit types per emirate (RERA / DTCM rent-only / None / ADREC / Northern Emirates), Validate and locked fields, permit statuses (Permit details needed, Not verified, Awaiting approval, Verified, Taken down, Permit expired), the Active switch rule, expiry job and reminders, required fields, image / file limits, agent assignment, Listing Performance and Mark as sold / rented.

3. Who can do what

Action	Super Admin	Agency	Agent
Open Commercial (KYC approved)	**Yes**	**Yes**	**Yes**
KYC pending	**n/a**	**No (padlock)**	**No (padlock)**
Listings shown	**All accounts**	**Own**	**Own + assigned**
Add (shared plan allowance)	**Yes, no limit**	**Plan / credits**	**Plan / credits**
Edit / View / Mark as sold	**All**	**Own**	**Own + assigned**
Active switch, Delete, Move, Bulk, Premium	**All**	**Own**	**Own only**
Listing Performance	**Yes**	**Plan feature**	**Plan feature**

Same rules as Module 07 section 3: an agency agent’s new listing belongs to the agency and counts against the agency plan.

4. Fields and validation

Identical to Module 07 section 4. Most important for commercial testing:

Field	Required	Rules / limits
Emirate, Category, Offering type, Property type, Property location	Yes	Options from Master › Property Options. DTCM permit forces Rent.

Field	Required	Rules / limits
Title, Address, City, Country (each language)	Yes	Title max 255, Address max 1000.
Slug	Yes	Unique across Properties and Commercial.
Property price, Currency	Yes	Price ≥ 0; currency 3 letters (default AED).
Latitude, Longitude	Yes	−90…90 / −180…180.
Rooms / Bathrooms	No	Whole numbers 0–1000; may be left empty for commercial units.
Permit number / expiry / QR	For a permit	Missing → “Permit details needed”. Permit number unique across **both** menus.
Images / Floor plans / Brochure	No	4 MB per photo, 30 new per save; floor plan image 4 MB, file 10 MB; brochure 20 MB.

5. Test scenarios

Priority: **High** core flow / data loss / access · **Medium** · **Low** cosmetic. Ask the project lead whether your server requires Super Admin approval for every listing and whether DLD / ADREC online validation is connected.

	Scenario	Steps	Expected result
CM-01	**KYC-pending account** High	1. Sign in as an Agency with KYC not approved; open `/crm/commercial`.	Menu has a padlock “Unlocks after KYC approval”; page shows “Your account is pending Super Admin approval.”
CM-02	**List shows only commercial** High	1. Account with listings in both menus. Open Commercial, then Properties.	Commercial: title “My Commercial”, only listings created in Commercial. Properties shows none of them. Totals and pagination are per menu.
CM-03	**Create a commercial listing** High	1. Click **Add Commercial Property**. 2. Fill required fields: Emirate, Category = Commercial, Offering type, Property type (e.g. Office), Property location, Title, Price, Address/City/Country, coordinates. 3. Leave Rooms and Bathrooms empty. **Save Commercial Property**.	Toast starts “Commercial Property created successfully.” plus the permit hint. Back on `/crm/commercial`, new card at the expected position; not in Properties.
CM-04	**Required field check** Medium	1. Open the Add form, click Save with empty fields.	Same red banner and tab jump as Properties (e.g. Please fill in "Property Type"...). Nothing saved.
CM-05	**Category vs menu** Medium	1. In Commercial, add a listing with Category = Residential; make it Verified and Active. 2. Check website `/commercial` and `/properties`.	Listing stays in the CRM Commercial list and appears on `/commercial`, not on `/properties`.
CM-06	**RERA permit Validate** High	1. Core details › Dubai › RERA, enter a test permit number, **Validate**, then save.	Same results as Module 07 PR-08 / PR-09 (success locks fields; not connected → “Not verified online...”).
CM-07	**Permit number shared across menus** High	1. Use a permit number already saved on a residential listing. Validate and Save in Commercial.	Validate: “This permit is already used by listing <ref>...”. Save rejected: “This DLD permit number is already used by another listing...”.
CM-08	**DTCM / None / Northern Emirates** Medium	1. Repeat Module 07 PR-14 and PR-15 inside Commercial.	Same behaviour: DTCM forces Rent and needs approval; None needs approval; Northern Emirates outside Al Ain needs no permit.
CM-09	**Go live and website page** High	1. Make a commercial listing Verified (Validate, or Super Admin approval) and switch it **Active**. 2. Open website `/commercial` and `/commercial/map`; open the listing.	Listing appears on the Commercial page and map with correct title, price, type and photos; detail page `/property-details/<slug>` shows permit number / QR and the assigned agent (or agency).
CM-10	**Cannot go live without permit** High	1. Switch on a “Not verified” or “Permit details needed” commercial listing.	Switch flips back with “This listing can't go live yet (...)...”. Not on `/commercial`.

	Scenario	Steps	Expected result
CM-11	**Shared plan allowance** High	1. Note the plan chip on Properties (e.g. 3 / 5). 2. Add one listing in Commercial. 3. Return to Properties.	Both menus now show 4 / 5. Hover text says “(Properties and Commercial combined)”.
CM-12	**Limit reached from Commercial** High	1. Fill the allowance using Properties listings; click **Add Commercial Property**.	Pop-up “You've used your plan's listings” opens instead of the form (credits / upgrade / wait options as in Module 07 PR-33).
CM-13	**Extra commercial listing with credits** Medium	1. Allowance used, credits on, test balance: **Continue with credits**, save a commercial listing. 2. Open Credits history.	Credits deducted using the commercial rate; transaction links to the listing (opens under `/crm/commercial`). Plan chip unchanged.
CM-14	**Wrong-menu URL redirect** Medium	1. Take a commercial listing id; open `/crm/properties/<id>` and `/crm/properties/<id>/edit`.	Redirected to `/crm/commercial/<id>` and `/crm/commercial/<id>/edit`; sidebar highlights Commercial.
CM-15	**Separate display order** Medium	1. In Commercial, **Move to** › Top on the last card. 2. Check the Properties order and website `/commercial`.	Commercial order changes and matches `/commercial`; Properties order is unchanged.
CM-16	**Search and filters** Medium	1. Search by title / reference; apply Buy/Rent, Active/Inactive, Premium only, Agent; click a Permit pill; Clear filters.	Only commercial listings are searched and filtered; pill counts only commercial listings; results kept in the URL.
CM-17	**Quality score without bedrooms** Low	1. Category Commercial, no rooms/bathrooms, all other details filled; hover the quality ring. 2. Change Category to Residential (if editable), save, hover again.	First: “Listing details” can reach 20/20 without bedrooms/bathrooms. Second: tip asks for bedrooms, bathrooms and points drop.
CM-18	**Listing Performance** Medium	1. Click the chart icon on a commercial card (paid plan with Property insights); then on a plan without it.	Panel opens for that listing; **Edit listing** opens `/crm/commercial/:id/edit`. Without the feature: “Property insights are included in paid plans…”.
CM-19	**Mark as rented (lease)** High	1. On a rent commercial listing: handshake icon › Rented, Rent (agreed), Rented on, Lease ends, a test tenant (New buyer), title deed + Ejari sample files. **Mark as rented**.	“Marked rented. It is now off the website and listed under Sold Listings.” Sold Listings opens; listing gone from Commercial and `/commercial`; new lead created and moved to won stage.
CM-20	**Bulk actions** Medium	1. Select commercial listings › Mark Inactive / Mark Active / Delete Selected.	Same as Properties: Mark Active skips listings that cannot go live; delete asks “Delete N listings?”.
CM-21	**Sidebar badge placement** Low	1. Have a commercial listing Taken down by Super Admin. Look at the sidebar.	Red count appears on **Properties**, not on Commercial (by design). The commercial card shows “Taken down” and **Fix now**.
CM-22	**Listing Permits link** Low	1. As Super Admin open a commercial listing in Listing Permits › **Full listing**.	Opens `/crm/commercial/:id` in a new tab.

	Scenario	Steps	Expected result
CM-23	**Super Admin view** Medium	1. Open Commercial from Admin › CRM.	“All Commercial”, all accounts’ commercial listings with owner name, no plan chip.
CM-24	**Agent scope** Medium	1. Agency assigns a commercial listing to its agent. Agent signs in and opens Commercial.	Agent sees the assigned listing and can edit / mark sold; cannot switch it on/off, delete or move it.
CM-25	**Mobile width** Low	1. Open Commercial list and form at about 375 px.	Cards stack; no page-wide horizontal scroll.

6. Expected results checklist

- [ ] Commercial list, form and detail use the Commercial labels and URLs.
- [ ] Listings added in Commercial stay in Commercial and appear only on `/commercial` when live.
- [ ] Plan allowance is shared with Properties; credits work the same way.
- [ ] Permit numbers are unique across both menus; permit rules and statuses match Module 07.
- [ ] Display order, permit pills and filters are per menu.
- [ ] Wrong-menu URLs redirect to the listing’s own menu.
- [ ] Mark as sold / rented moves the listing to Sold Listings and off the website.

7. Known behaviour (not bugs)

By design:

- The Category field (Residential / Commercial) does not decide the menu or website page – the menu used to add the listing does.
- The compliance badge for commercial listings is shown on the Properties menu.
- The plan chip shows the same numbers in both menus because the allowance is shared.
- All Module 07 “known behaviour” notes also apply here.

Test data cautions: test permits only, fake buyers / tenants, sample documents (no real Ejari or title deeds), no real card payments for credits.

8. Reporting a bug

Include: module (Commercial), role and account, plan, listing reference / ID, Category value, permit type and status, steps, expected vs actual, exact message, time, screenshot. Use test data only.
